INTRODUCTION

To build your technology skills set, start with the basics, you should be able to demonstrate proficiency in common office software such as Microsoft Office. Mastering these functions provides a foundation from which to build on.

Law students don't need to have an in-depth knowledge of every technology application but an important skill is the ability to think critically about the use of technology and how it will impact clients.

Below we've compiled some of the technology skills that every law students should master to become indispensable to the firm:

1. Legal Research Skills

As a legal professional, you may be asked to use library and Internet resources to discover and confirm information relevant to court cases, and legal meetings. You may also perform related duties, such as preparing official legal documents.

2- COMMUNICATION

Most law students need to be confident using online communication tools to effectively collaborate with colleagues like email and the internet.

3 -OFFICE TECH

Scanners, printers, and copy machines are still significant tools that a legal assistant should know how to use. These will be in every law office.

These office machines are commonly used in most offices. Having experience with these machines will be necessary to function in the office.

4- WORD PROCESSING

Document creation is a large part of a legal professional's responsibilities. Microsoft Office, Open Office, and Google Docs are common software suites that are used in many law firms. Knowledge of one of these programs is a must for legal professional

In practice, you will draft a variety of different documents including letters, agreements, contracts, and court forms, being confident in advanced

find and replace, review tools, track changes and formatting in Microsoft Word are essential.

In addition to Word, there are other digital word processing tools such as Google Docs that mimic many of the features available in Word but are cloud-based which makes sharing with colleagues very easy

5- CREATING PRESENTATIONS

Understanding how to create an effective presentation in Microsoft PowerPoint is important, you might be involved in a client presentation or a training event.

Back in the day, presentations were set up using physical displays and charts. Today you can save time, money, and energy by simply learning how to use presentation software. The most well-known presentation tool is Powerpoint.

The key to a good presentation is knowing how to condense information and present it effectively.

Important Websites

Some Important Web Pages you will be visiting regularly when you are working as a lawyer.

- egyls.com — نقابة المحامين المصرية
- cc.gov.eg — محكمة النقض المصرية
- laweg.net — بوابة مصر للقانون والقضاء
- manshurat.org — منشورات قانونية
- lawgazette.co.uk — مجلة قانونية بريطانية
- onecle.com — قاعدة بيانات لنماذج عقود

- reverso.net — ترجمة
- onelook.com — قاموس أونلاين
- almaany.com — قاموس المعاني

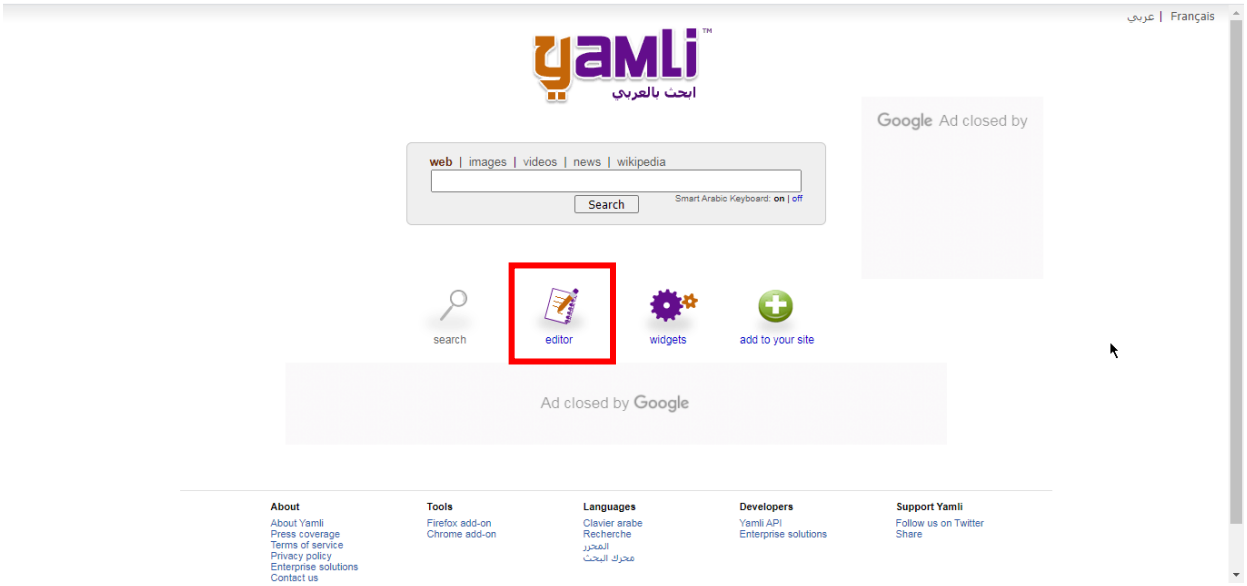

- tybaa.com — أكاديمية الطباعة
  موقع لتعلم الكتابة على الكيبورد باللغة العربية
- yamli.com — موقع لتحويل الكتابة من الفرانكو عربي إلي اللغة العربية

Yamli.com

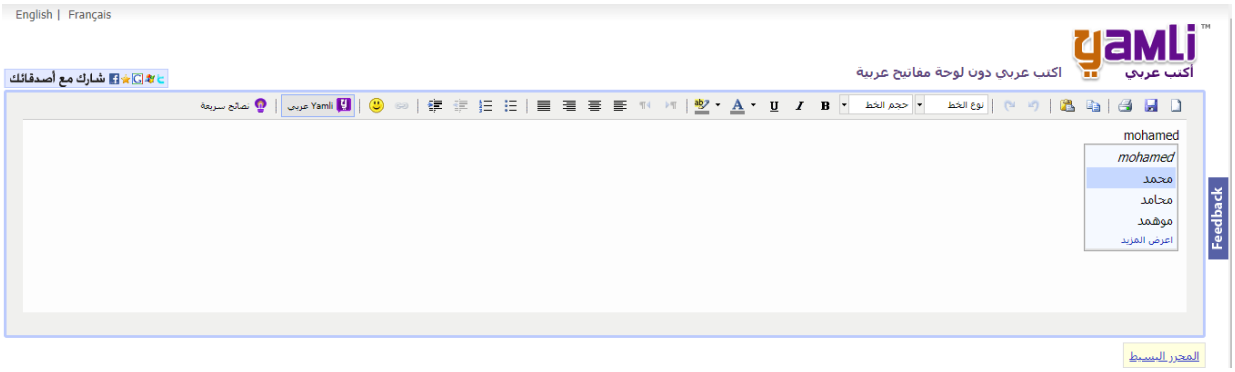

With Yamli.com we can write Arabic text without Arabic keyboard, or without knowing Arabic letters like the case if we use Franco-Arabic letters.

Go To Yamli.com

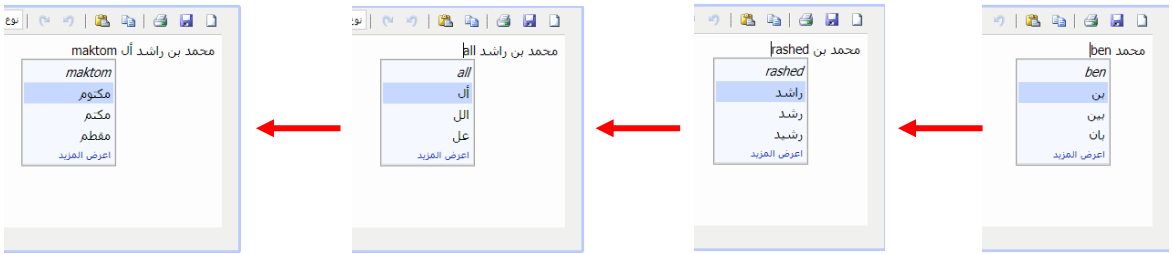

1. go to yamli.com and press the **editor** link at the middle of the page.

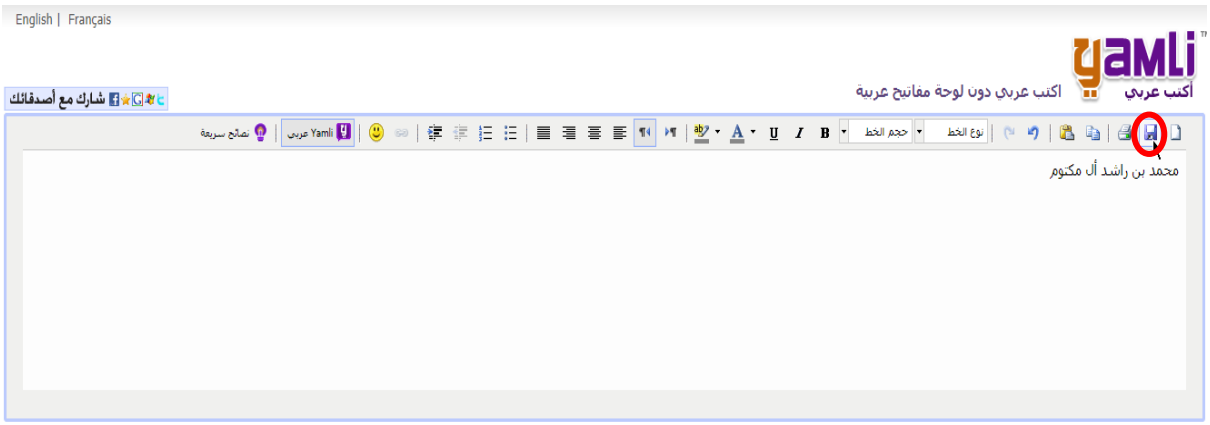

2. Start Typing the Franco-Arabic Text inside the editor and it start showing the possible correct result menu.

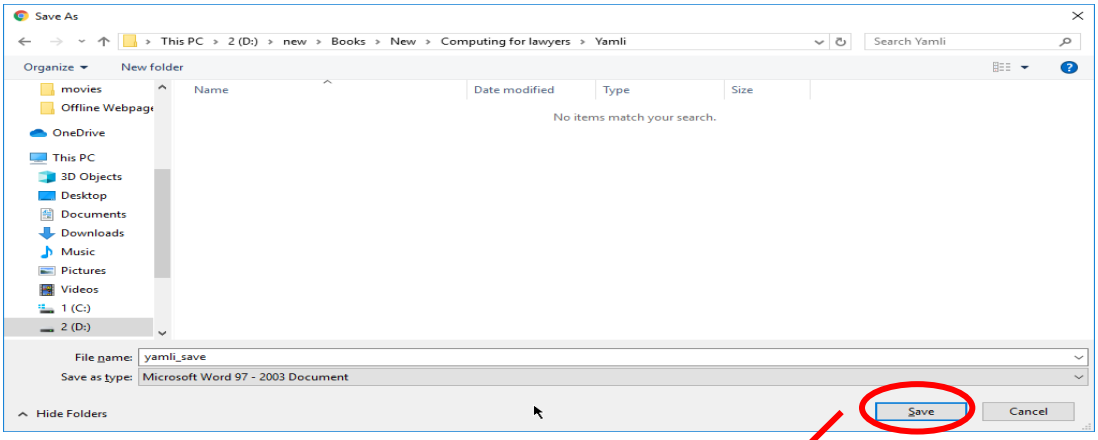

3. Continue pressing space after each word and it will convert it automatically.

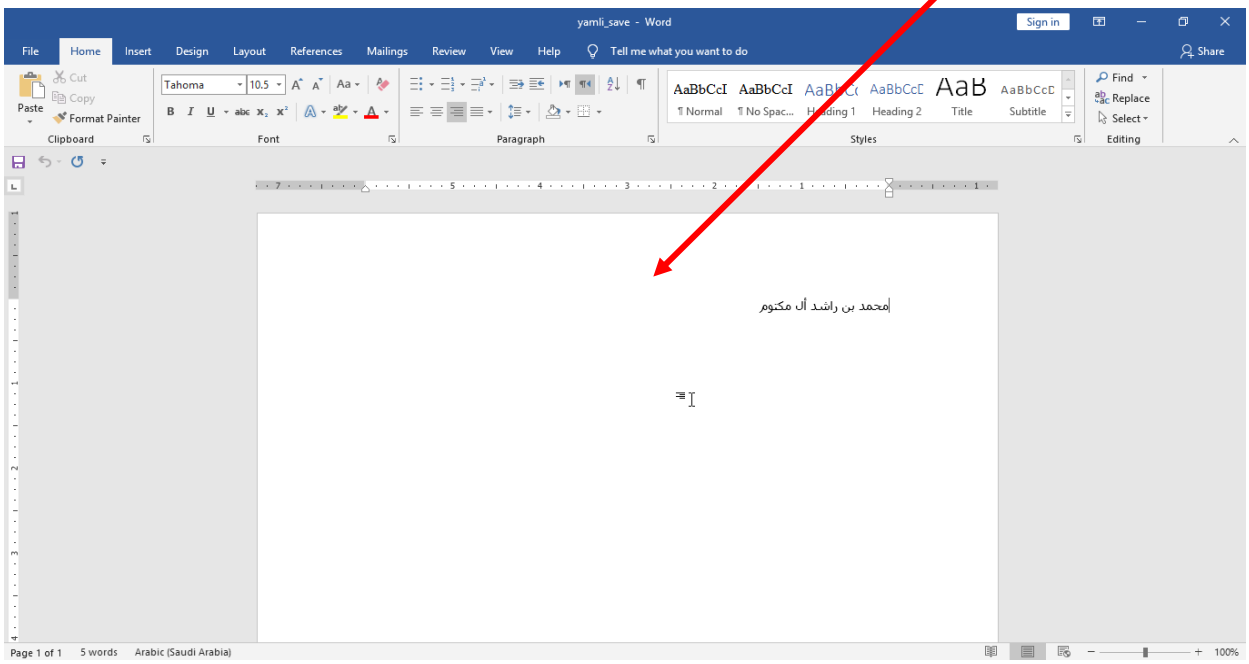

4. After Convert all out wanted text to arabic we can save this text as word file in order to use it inside microsoft office program and this by pressing the save button at the top right corner.

5. After that we choose the save directory and from there we can open the save file inside Microsoft word.

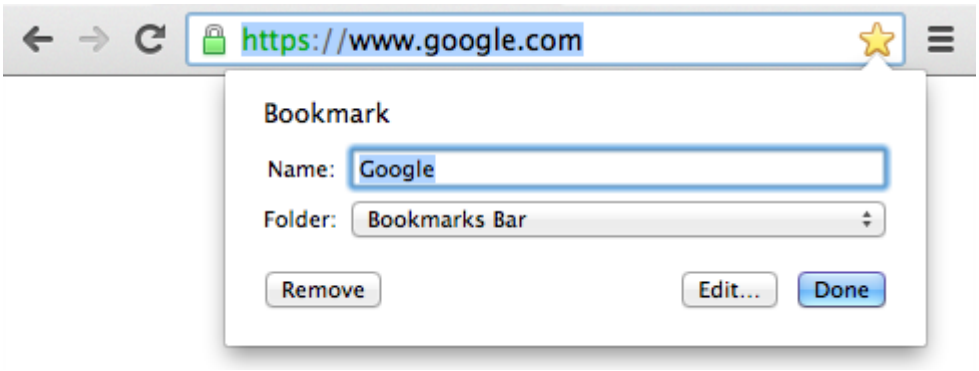

Google Chrome

Google Chrome Bookmarks

With Google Bookmarks, you can save shortcuts to your favorite webpages and navigate to them in seconds from anywhere.

Add a bookmark

1. On your computer, open Chrome.
2. Go to the site you want to visit again in the future.
3. To the right of the address bar, click Star ☆.
4. Click Done.

Tip: You can open bookmarks faster with the bookmarks bar. You'll find your bookmarks under the address bar. Click a bookmark to open it.

Tip: To turn the bookmarks bar on or off, click More ⋮ › Bookmarks › Show Bookmarks Bar.

Organize your bookmarks

Move your bookmarks into a folder

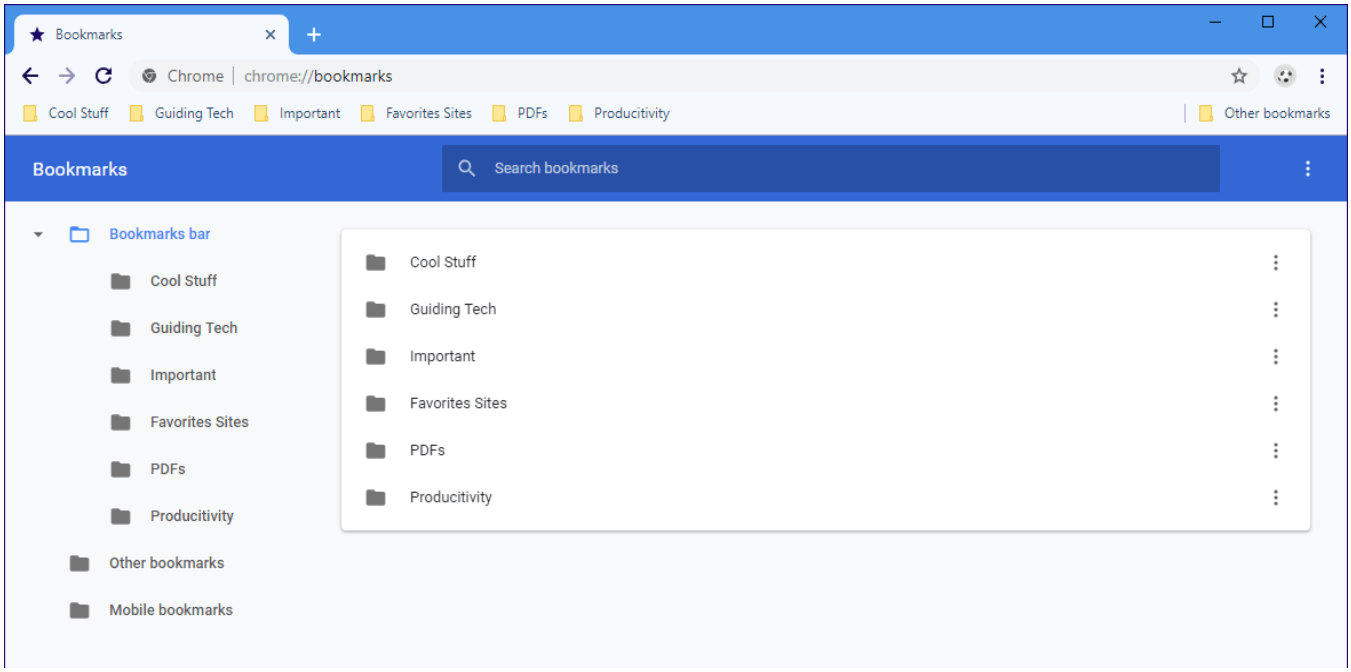

1. On your computer, open Chrome.
2. At the top right, click More ⋮ › Bookmarks › Bookmark Manager.
3. Drag a bookmark up or down, or drag a bookmark into a folder on the left. You can also copy and paste your bookmarks in the order you want.

If you use the bookmarks bar, you can drag your bookmarks into the order you want.

Put your bookmarks in folders

1. On your computer, open Chrome.
2. At the top right, click More ⋮ › Bookmarks › Bookmark Manager.
3. At the top right, click More ⋮ › Add new folder.

If you use the bookmarks bar, you can add a folder by right-clicking the bookmarks bar. Click Add Folder.

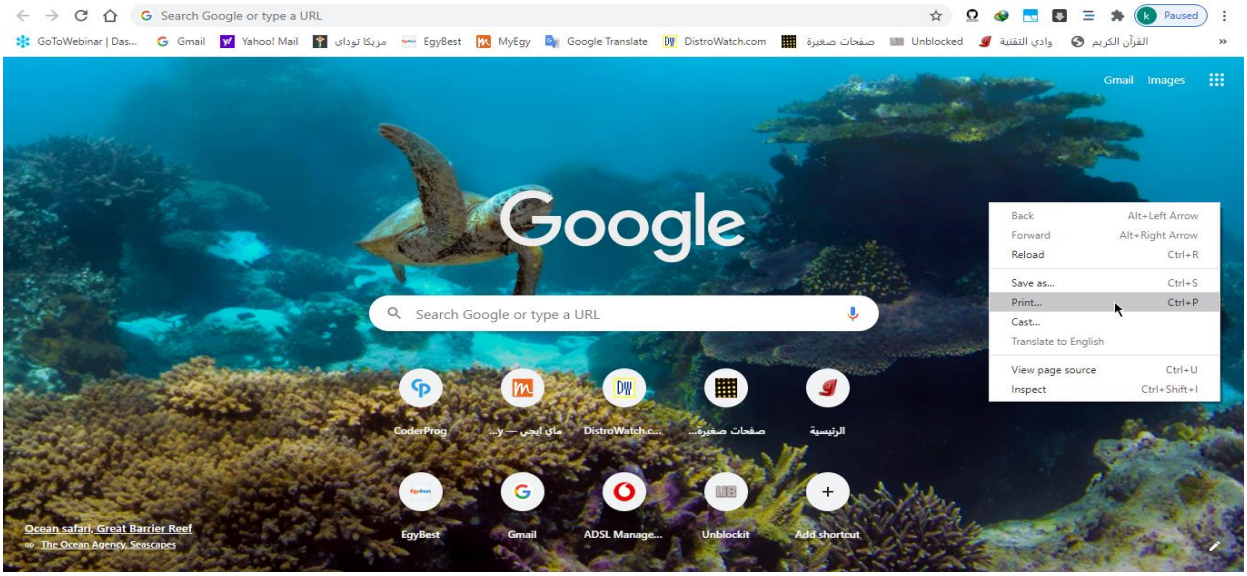

Print Web Pages & Print As PDF

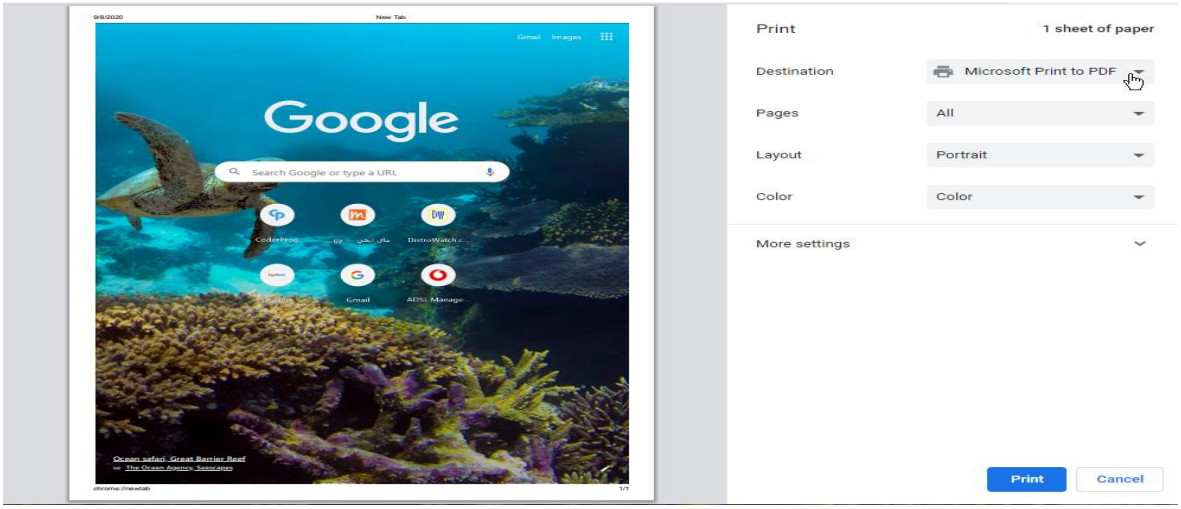

With Google Chrome, you can print your webpages or save them as PDF files.

1- Using the Print button

1. On your computer, open Chrome.
2. Go to the site you want to print.
3. Right Click in any empty space on the site.
4. From the showing menu choose **Print….**

5. this will open the **Print** dialog box where you choose many things regarding printing your web page like:
    a. Destination or the Printer name.
    b. The pages you want to print if the web page has more than one page.
    c. The layout of the printed page or the dimension of the paper.
    d. Color to choose between black & white or color pages.

6. Click **Print** after that.

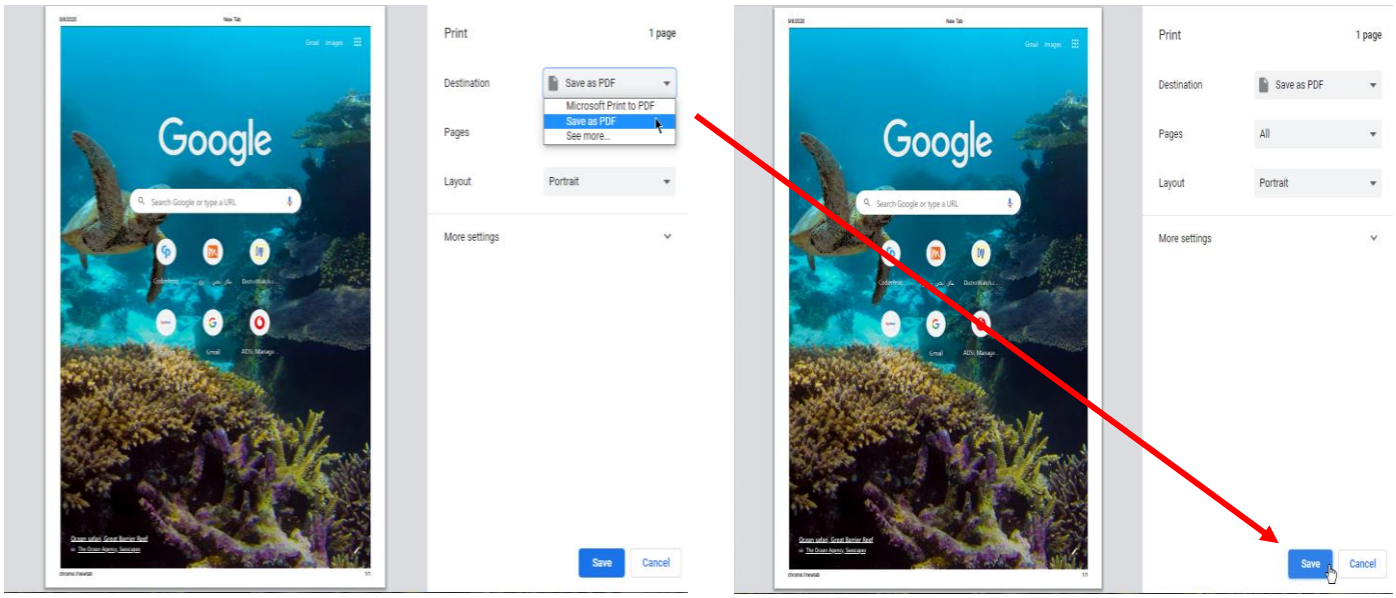

3- Using the Keyboard Shortcut Ctrl + P :

1. Start the same as before, until you open the web page.
2. Click the **Ctrl + P** Shortcut key.
3. And the Print dialog will appear, and you can continue from there as before.

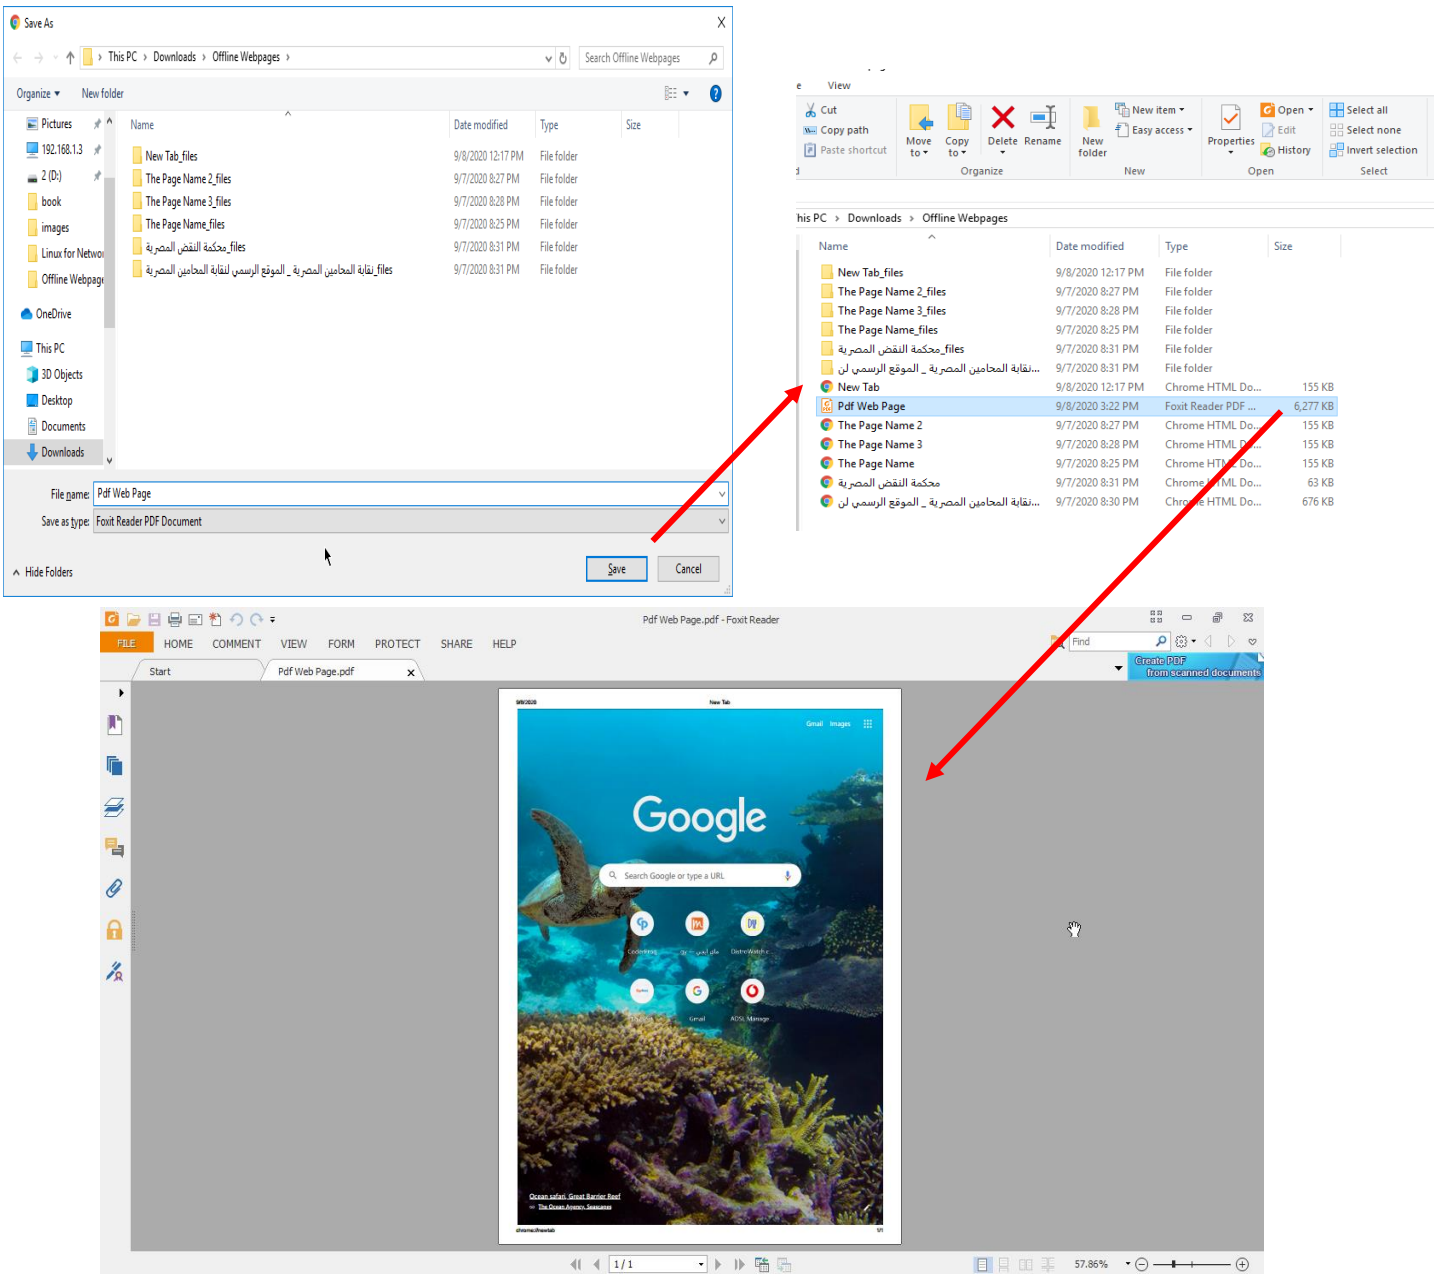

you can save web pages as PDF files by using the print function as before but instead of choosing to print the web page, we will choose the destination or the printer name to become **Save as PDF** this will give us the ability to save our web pages as a pdf file.

4- Print Web Page As PDF :

1. Start the same as before, until you open the web page.
2. Choose the **Print** like before.
3. And the Print dialog will appear, in this time we will choose the Destination to be **Save as PDF** from the Destination menu.
4. After that, we click the **Save** button on the bottom right corner.

5. This will open the Save As dialog box from there we can choose the name of the saved pdf file and it's location on our hard drive.
6. we click the **Save** button after that, and if we open the directory where it saves we can open it like any normal pdf file.

Gmail Contacts

Organize and merge your contacts. Create personal mailing lists. Quickly send messages to groups of people you contact the most, without entering their addresses individually. With Google Contacts, it's easy to keep all your contact information in one place and reach several people at once.

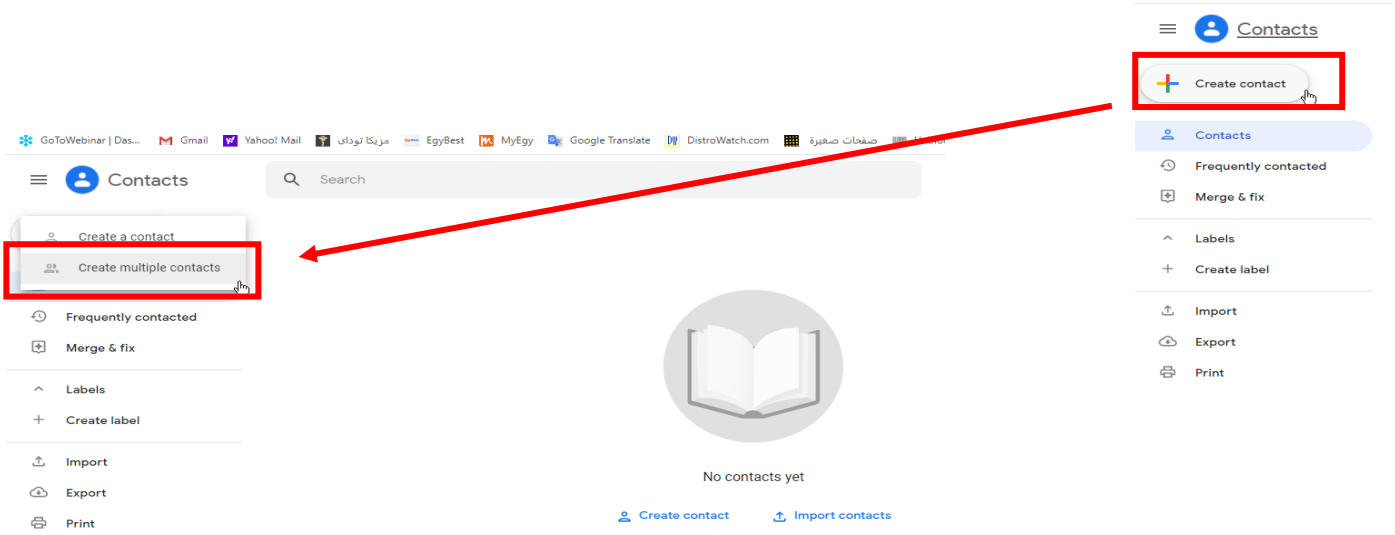

Access contacts:

1. In a Chrome Browser window, click the Apps Launcher Contacts.

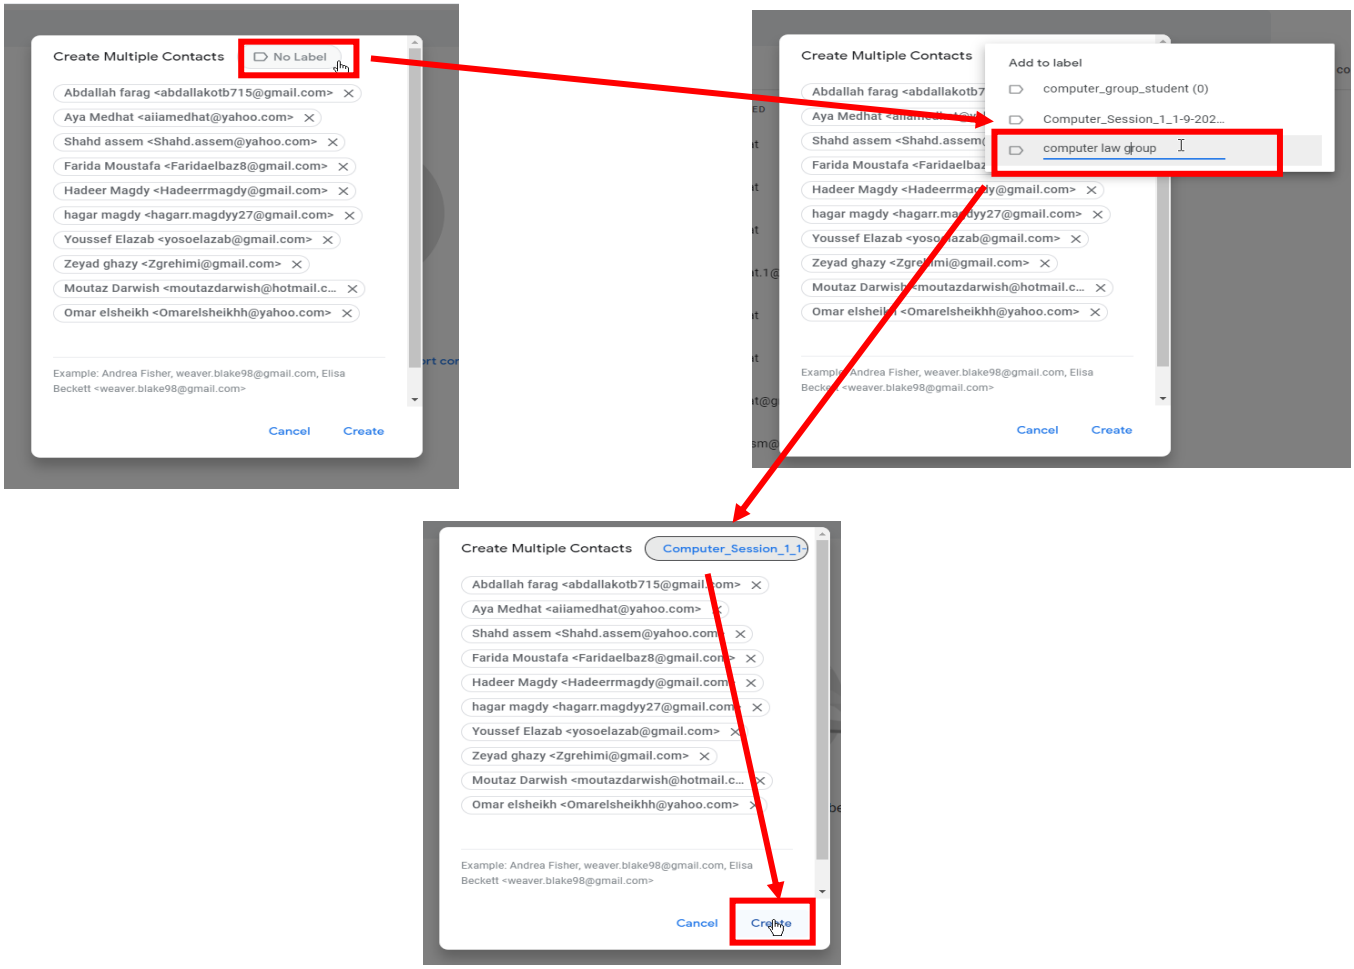

Add a new contact group:

1. Open Contacts and click **Create contact**.
2. Press **Create multiple contacts**

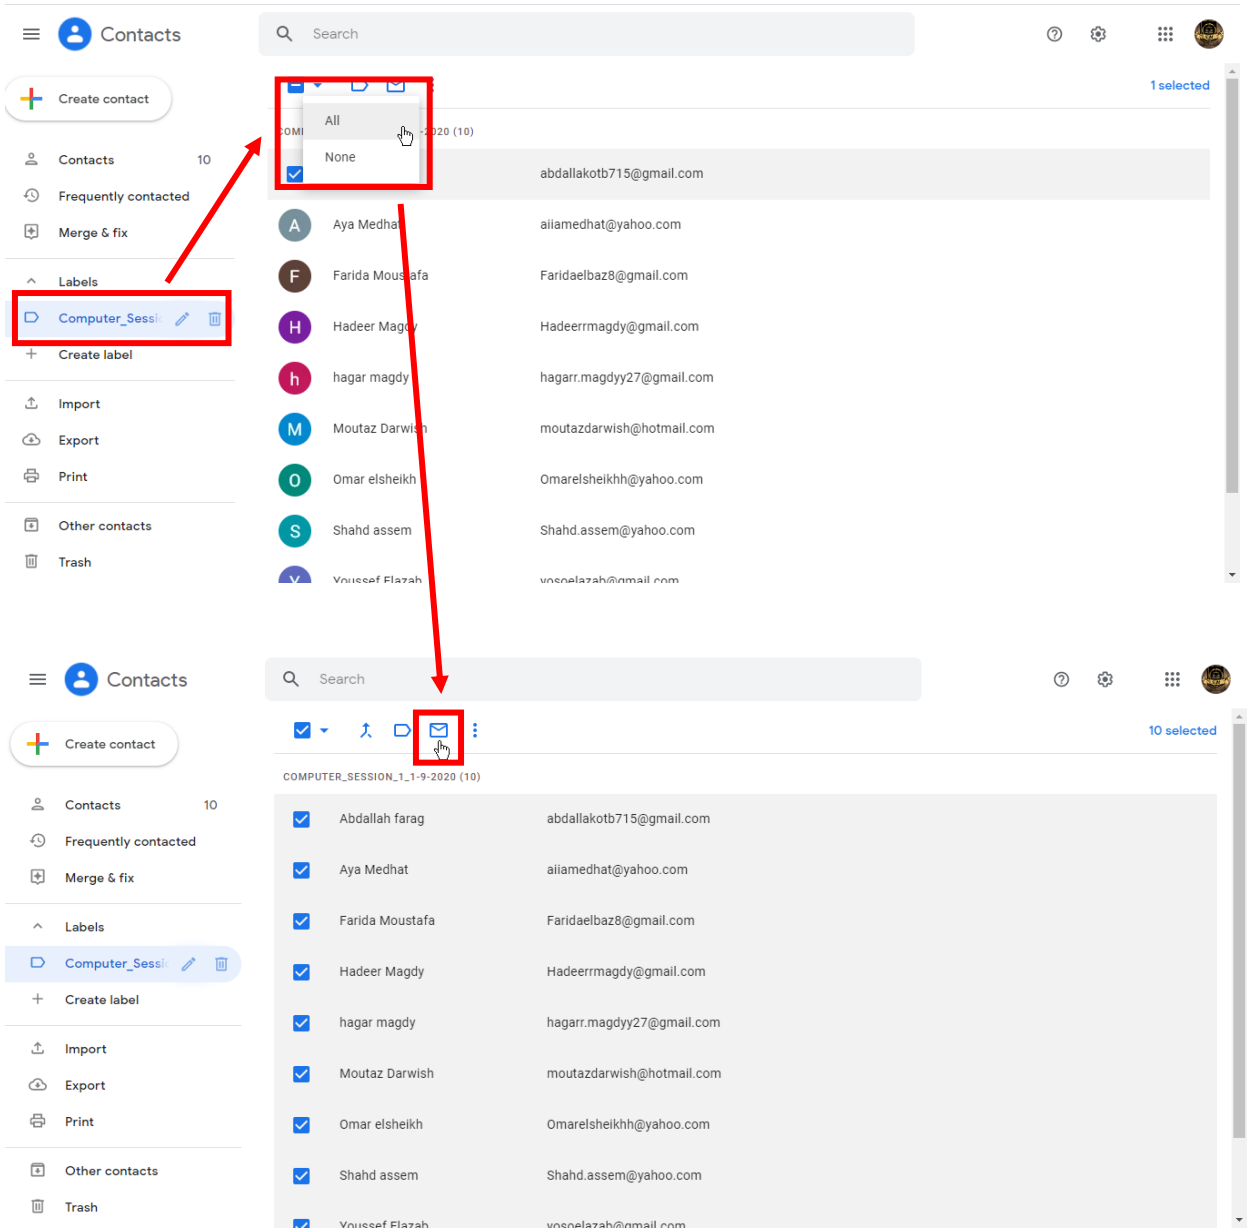

3. Enter the names and emails for your group by entering the name and <email> and, and then the name and <email>.
4. To group these contacts we make a new Label to group them by choosing **No Label.**
5. Or choosing the label name from the list if it exists.
6. Then press the **Create** button to group our contacts in the choosing label.

To Send Email To the Group of Contacts:

1. Choose the label from the Right Pane.
2. Select one of the contacts and then from the above link click **All** to select all of the contacts at once.
3. Press the **Email** button to open the compose dialog to send emails to all of them at once.

Signature On Gmail

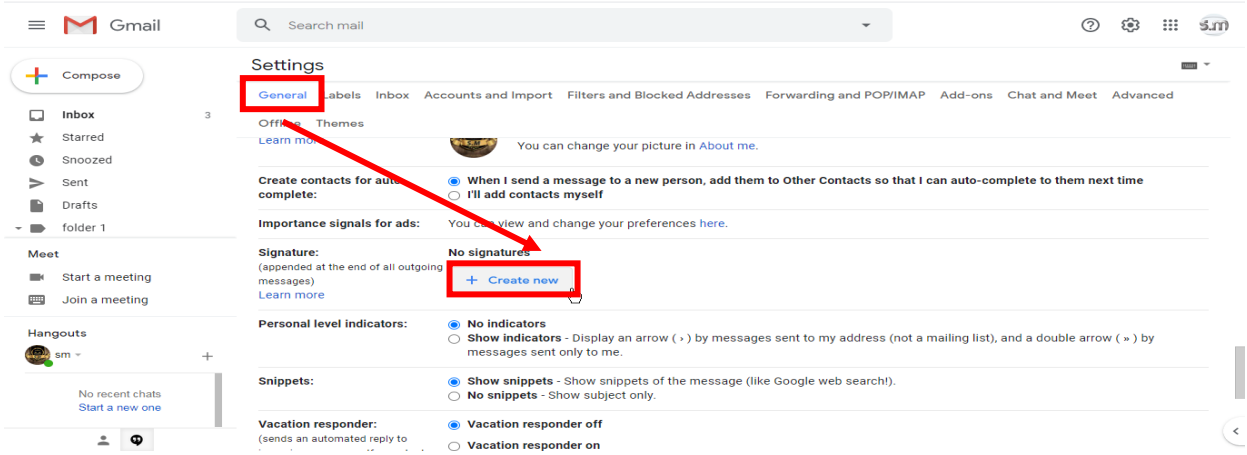

An email signature comprises a few lines of text placed at the bottom of all outgoing mail. It can contain your name, website, company, phone number. Use this space to share essential contact information and to advertise both yourself and your business.

Create Signature in Gmail:

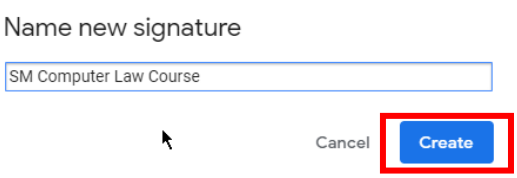

1. Go to the right side of your inbox and click the **Settings** gear in the toolbar.
2. Select **See all settings**.

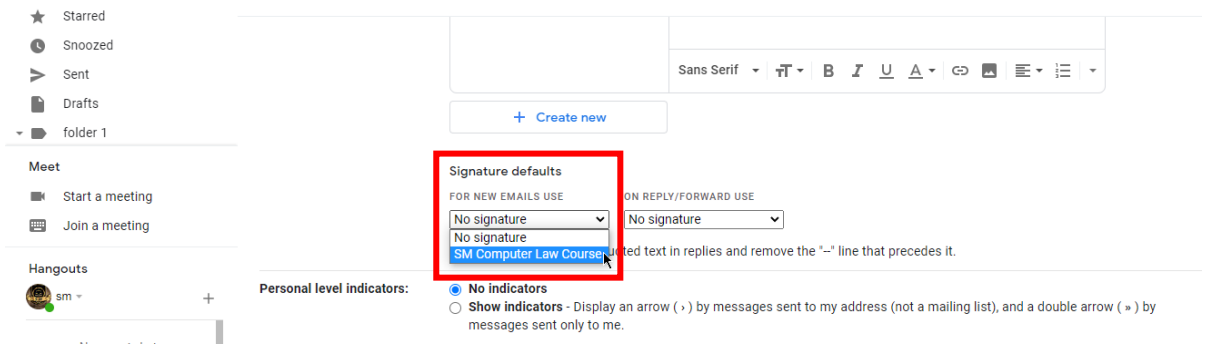

3. In the **General** tab reach down to **Signature**.
4. then click **Create new button**.

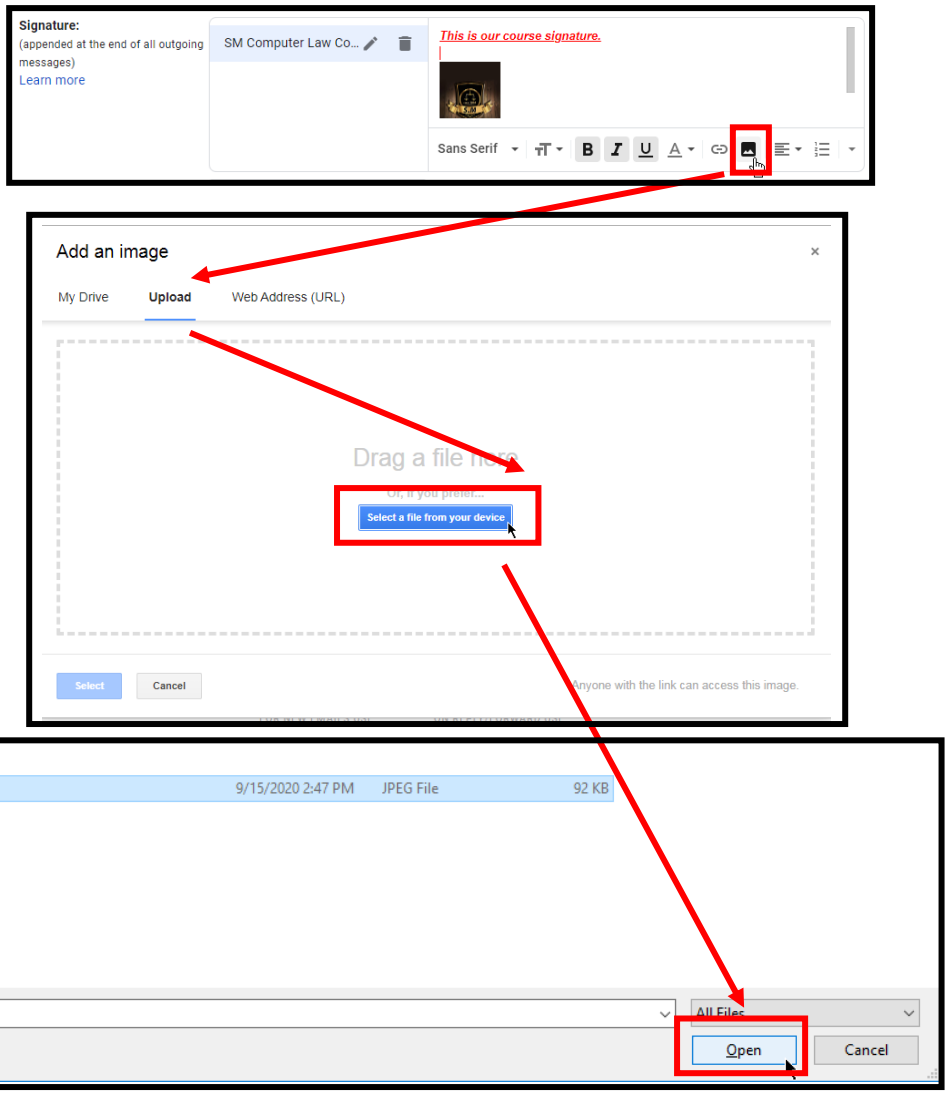

5. Enter Name for the new signature then press > **Create**.

6. Choose the signature you would like to use for the outgoing message or new Emails to included by default.

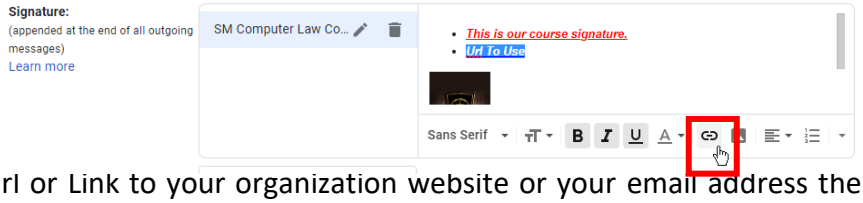

7. Now Start typing and text you want that will be inserted by default on your signature on any outgoing emails.
8. we can insert images to be included in the signature by pressing the image button.
9. next Upload image from our computer by drag and drop it or click the **Select a file from your device** button.
10. after that choose the image and click **open** button

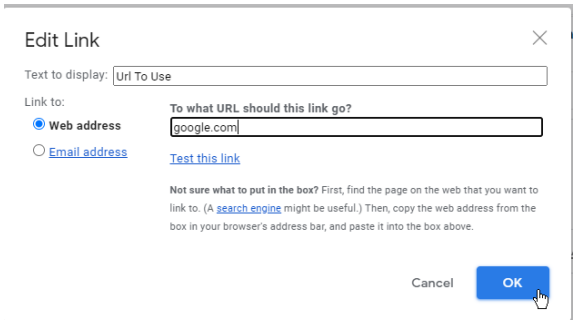

11. To change the size of the image select it and select the size from beneath it.

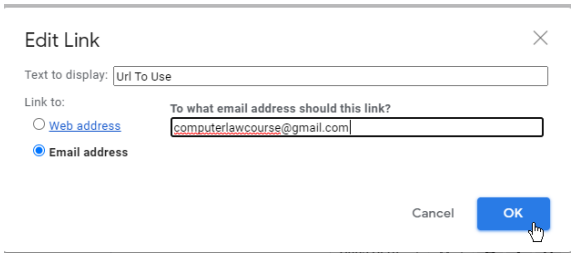

12. To Add a URL Or Email to our signature highlight any text you want then press the **Link** button.

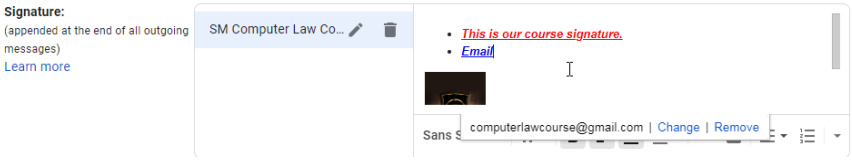

13. Choose the Url or Link to your organization website or your email address then press **Ok** button.

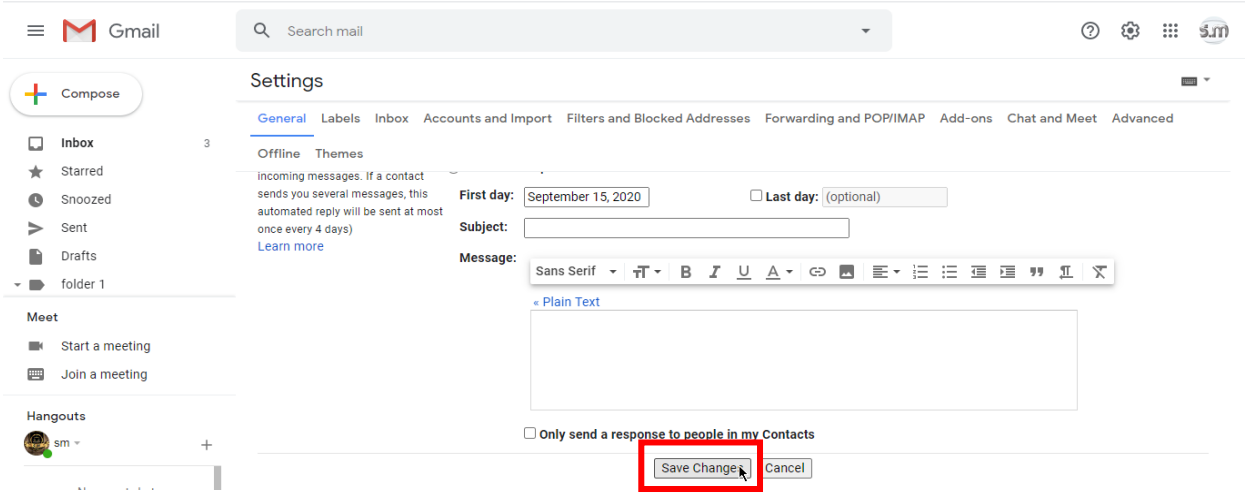

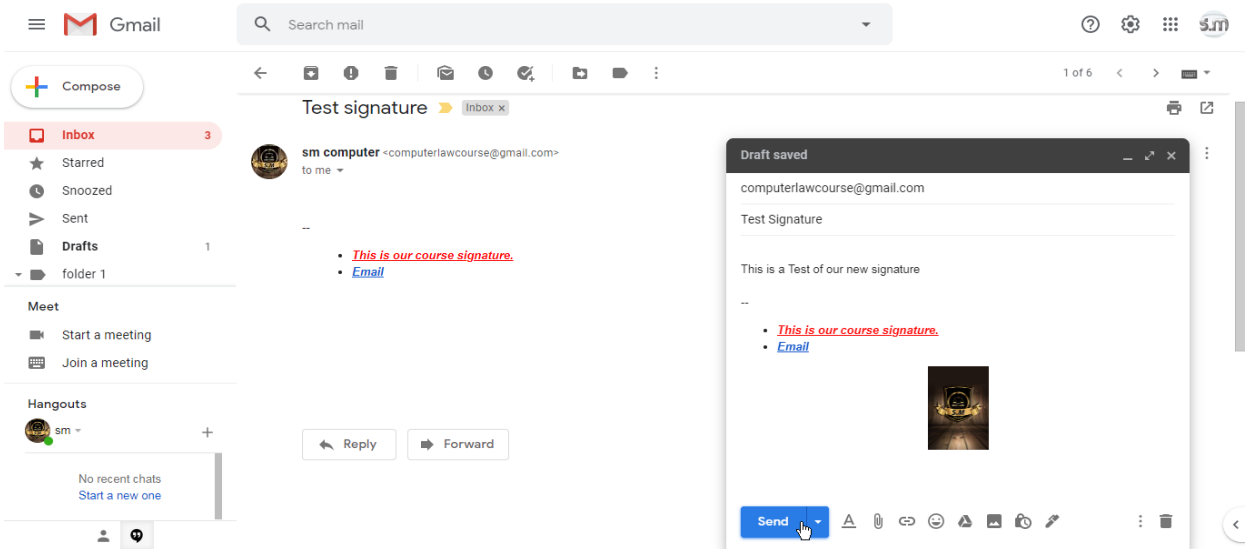

14. Clicking the link text will show us the Email or website link that you choose before.

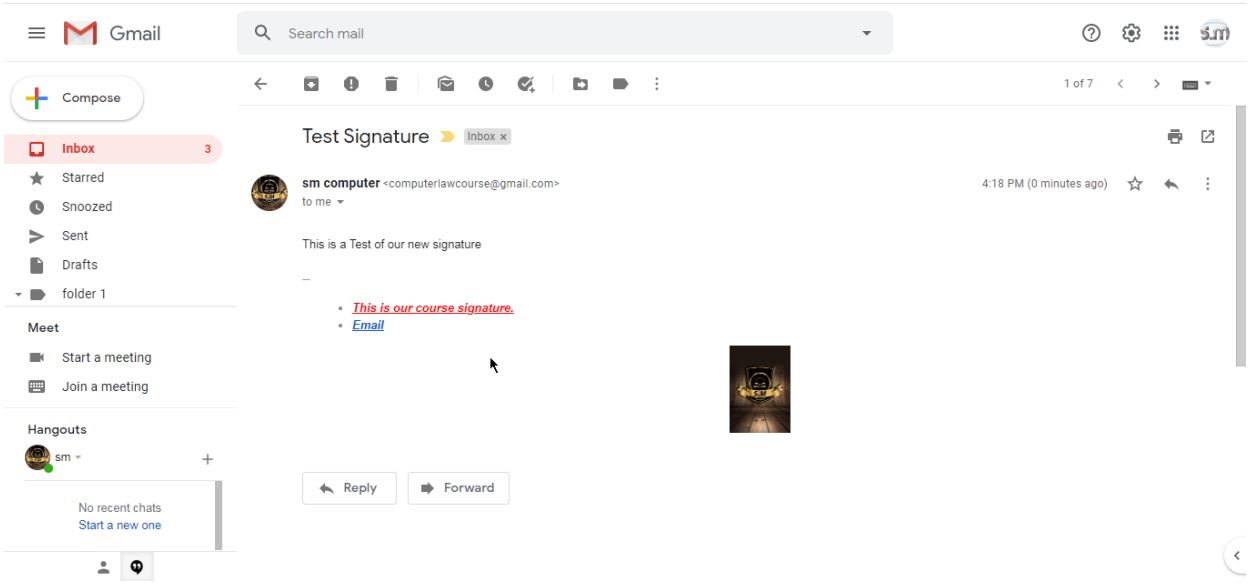

15. The Last thing to do is to save our signature by select **Save Changes** at the bottom of the settings page.

16. Gmail will now insert the signature automatically when you compose a message. You can edit or remove it before you select **Send**.

CC and BCC in Gmail

- CC in Gmail

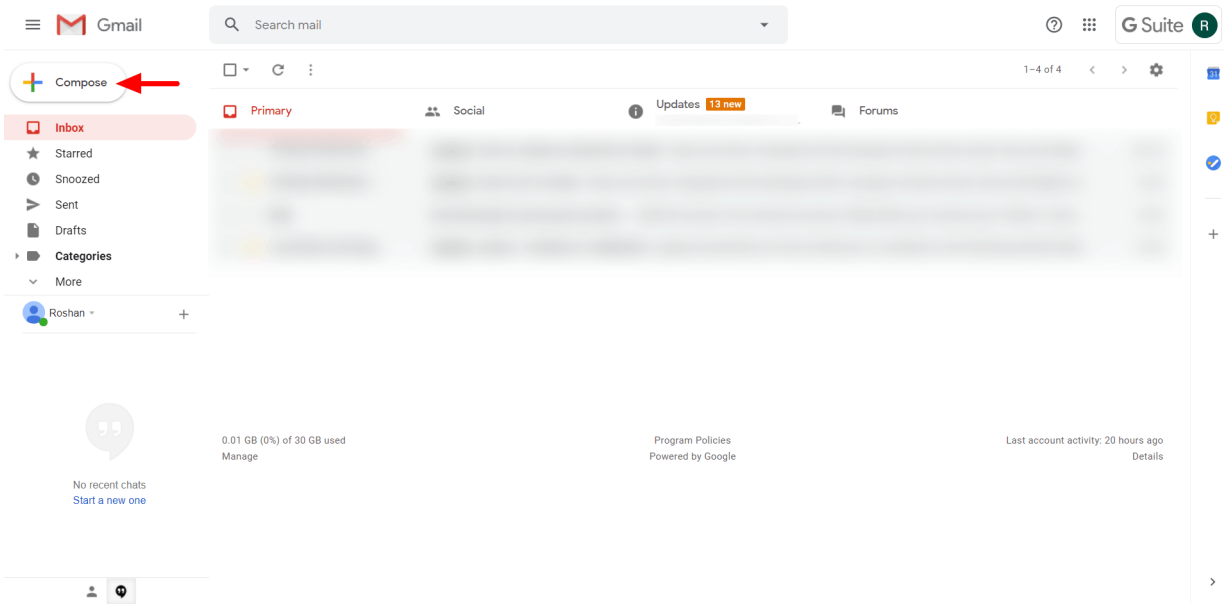

The CC (carbon copy) field allows you to send an email to multiple recipients. The CC feature ensures that all your recipients can see who has been added to your mail.

- How Is "CC" Different from "To" in Gmail?

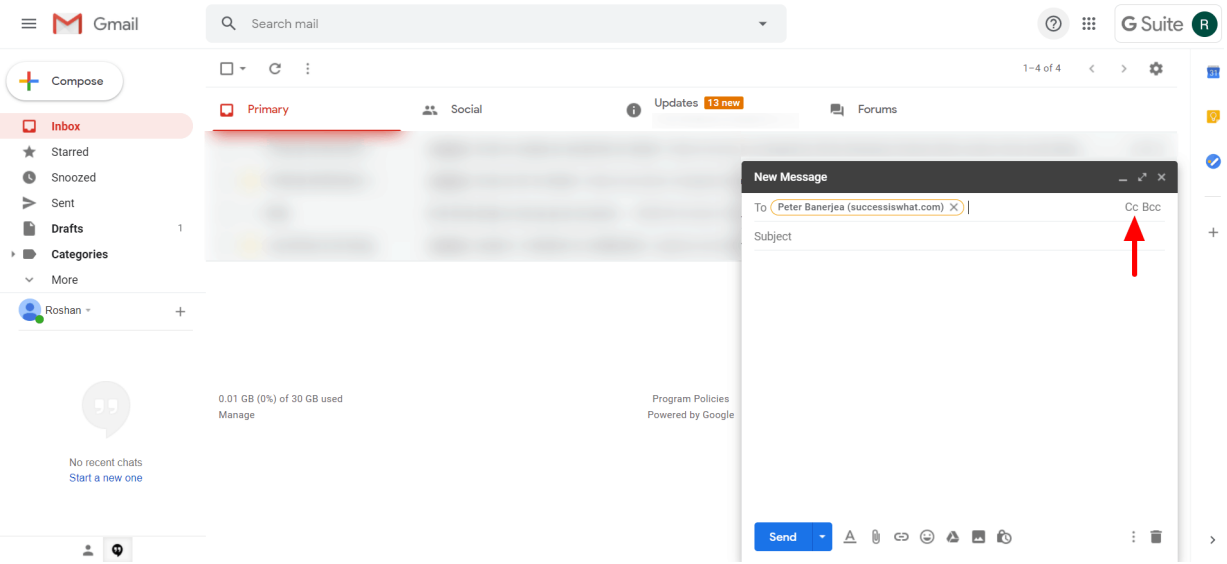

The "To" field is used for your primary recipients — people who are required to act in response to your email.

- How to CC in Gmail

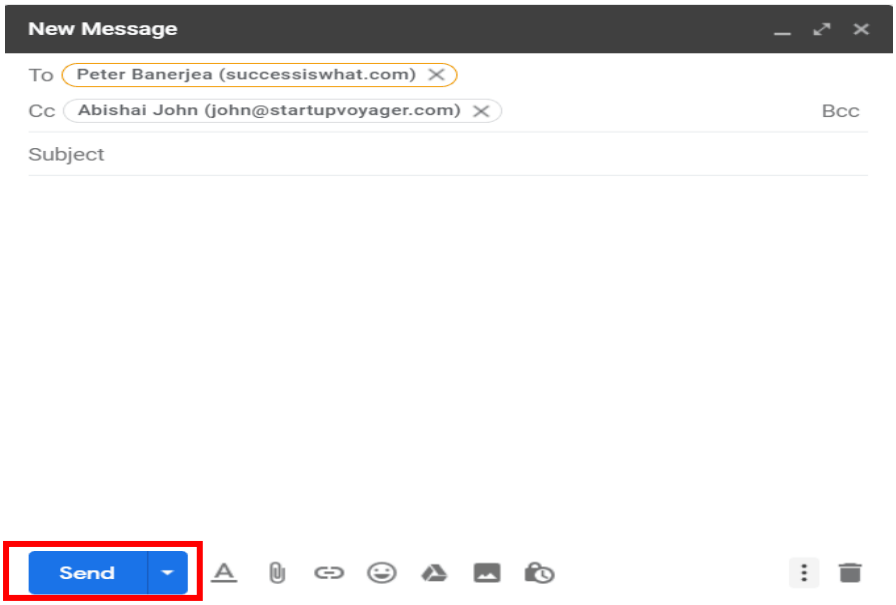

1. Log in to your Gmail account and click **Compose** to open up the Gmail compose window.

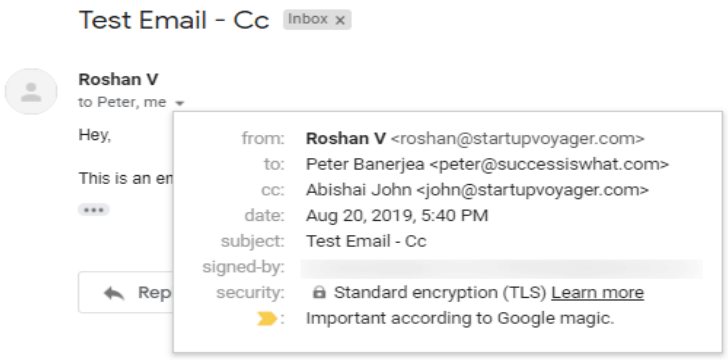

2. In the To address box, type your primary recipient's email address. Separate multiple addresses using a comma.
3. Click **CC**, as shown below.

4. Enter the email address of recipients who'll receive a copy of the email in the CC field.

5. Compose your email subject and message. Hit **Send** when your message is complete, All your recipients (primary + CC'd) will receive the email.
6. Let's see how it looks at a recipient's end.

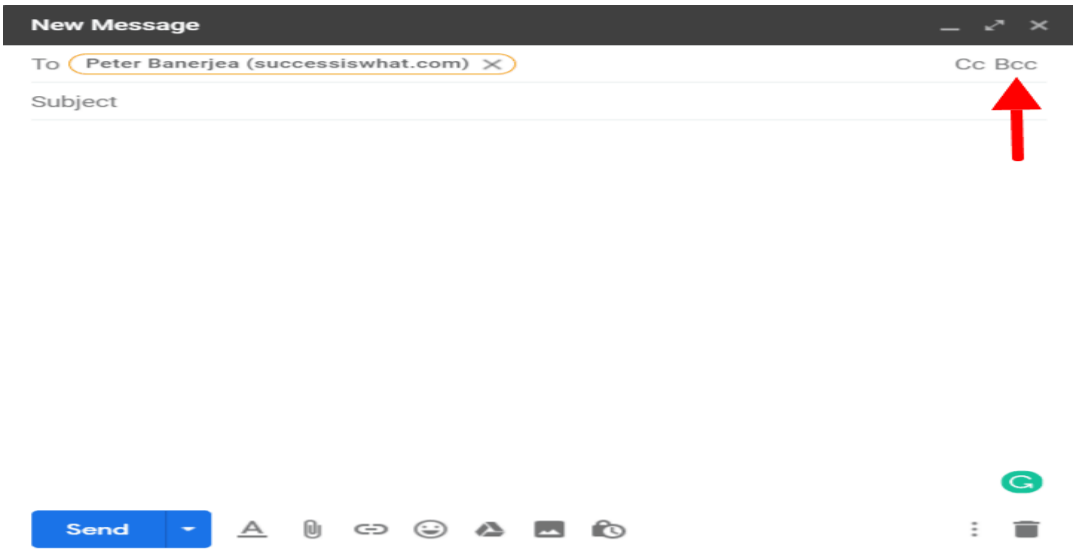

7. All recipient addresses in the To and CC fields are visible to everyone

- BCC in Gmail

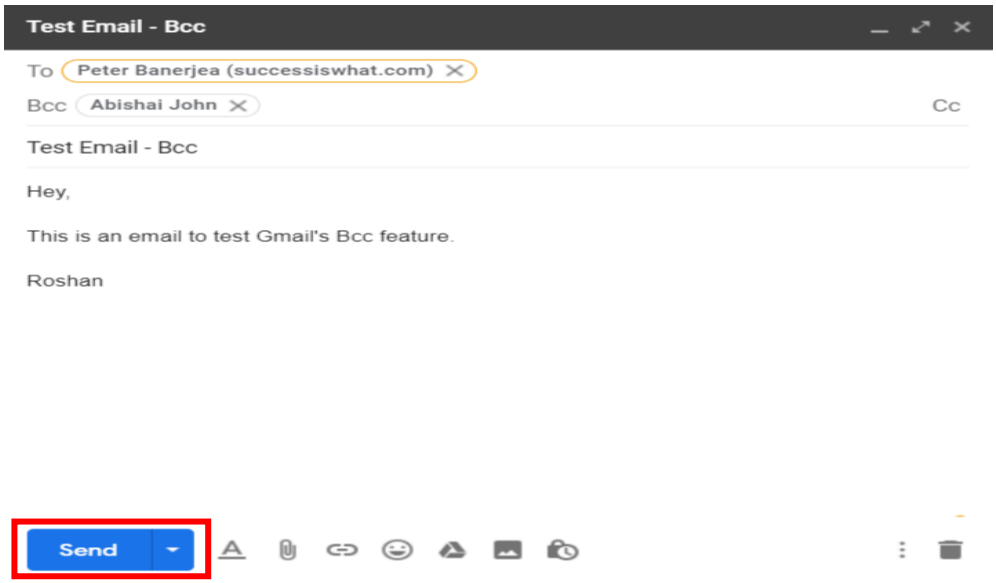

The BCC (blind carbon copy) field allows you to send an email to multiple recipients. However, when using BCC, the primary recipients of the email will be unaware of other recipients you've included.

How to BCC in Gmail

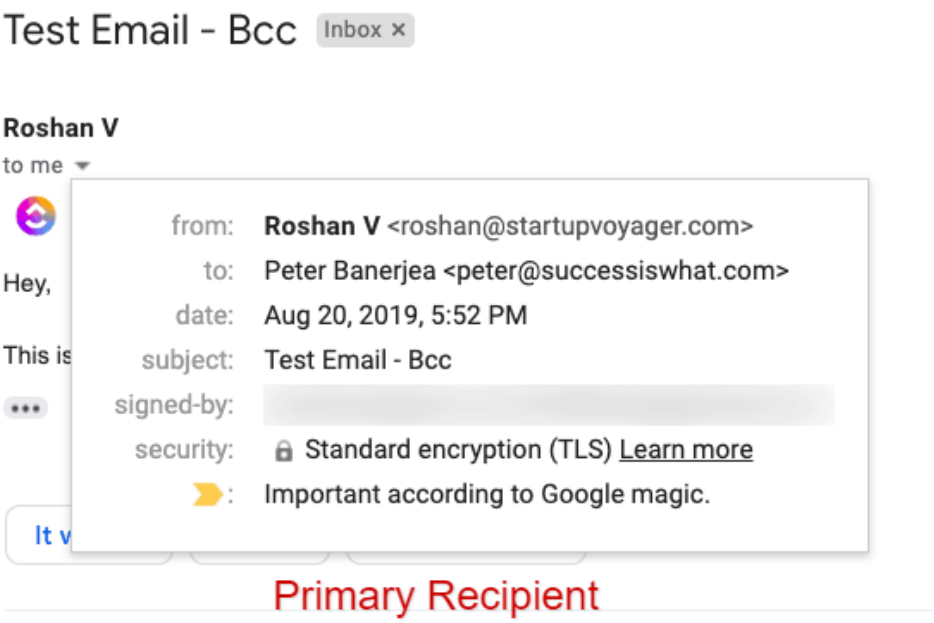

1. Use the same first steps that you'd use in How to CC in Gmail. Except, this time, click on add BCC instead of CC.

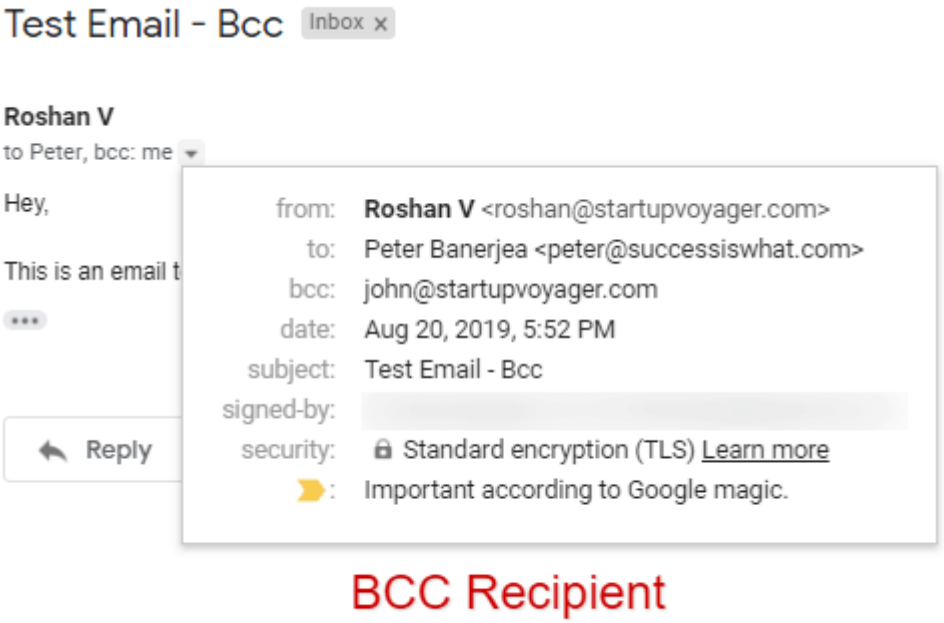

2. Enter the recipients you'd like hidden in the BCC field. Compose the message and send it.

3. On the recipient side, it will look something like this:

4. The main recipients of your email can't see who else has been added. However, your BCC recipients will be able to know that

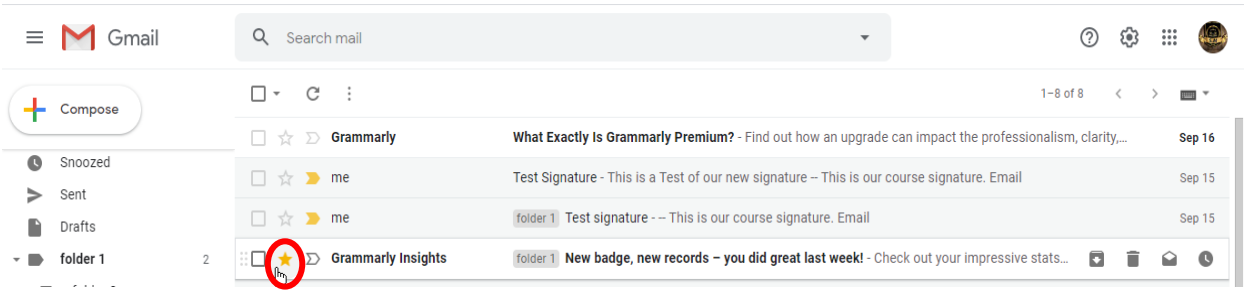

Star Or Important Emails in Gmail

Gmail's star system allows you to mark your most important emails so you can easily find them later. By default, starred messages are labeled with a yellow star.

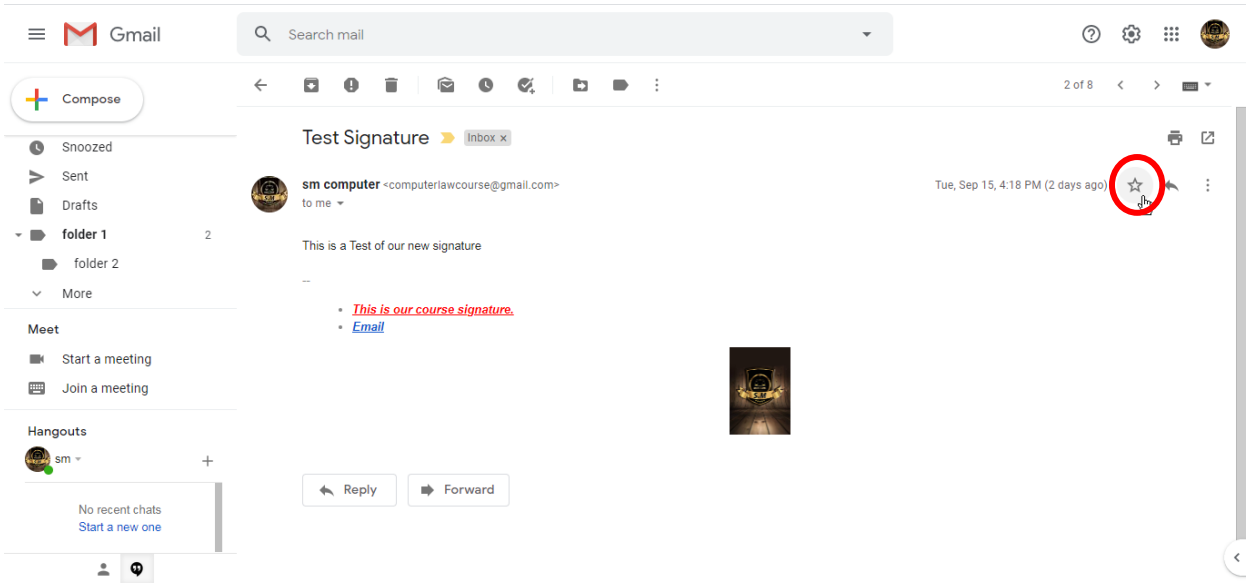

- Star an email

1. On your computer, open Gmail.
2. From your inbox, go to the left of the message, then click Star ★.

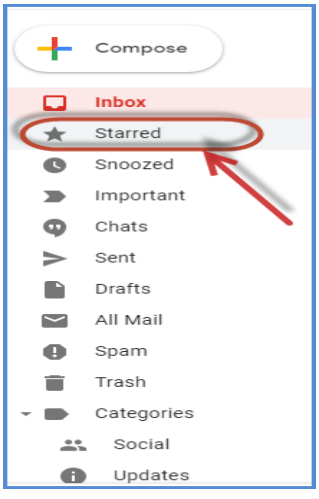

- Start an Open Message

1. If the message is open, click the Star and the top right corner.

Search for your starred emails

2. On your computer, open Gmail.
3. On the left side of the page, click **Starred**.
4. You may need to click More first.

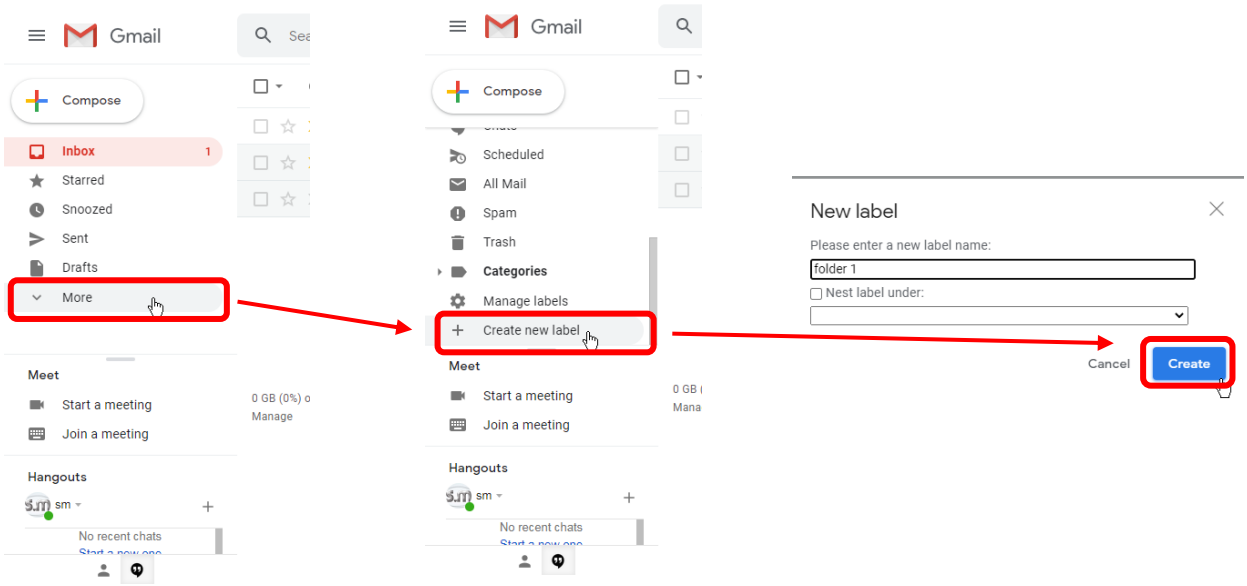

Folders On Gmail

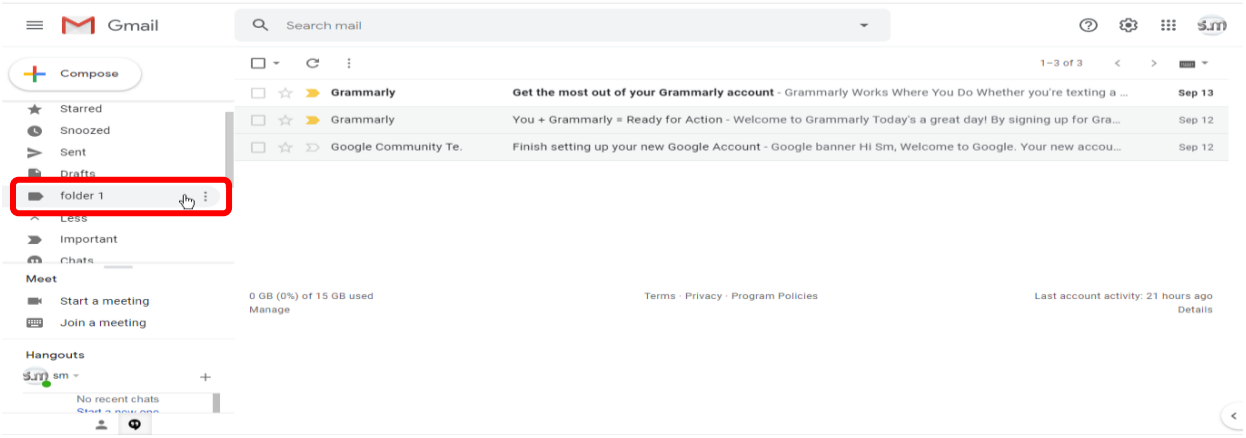

With Gmail, we can organize our message in a better way than leaving it inside our inbox, Gmail gives us a great way to organize our messages inside folders, but in Gmail, folders are called a label.

Create Label in Gmail:

1. Go to the left side of your inbox and click **More**.
2. From there, you'll see the option **Create new label**.
3. In the pop-up window, name your label.
4. then press **Create**.

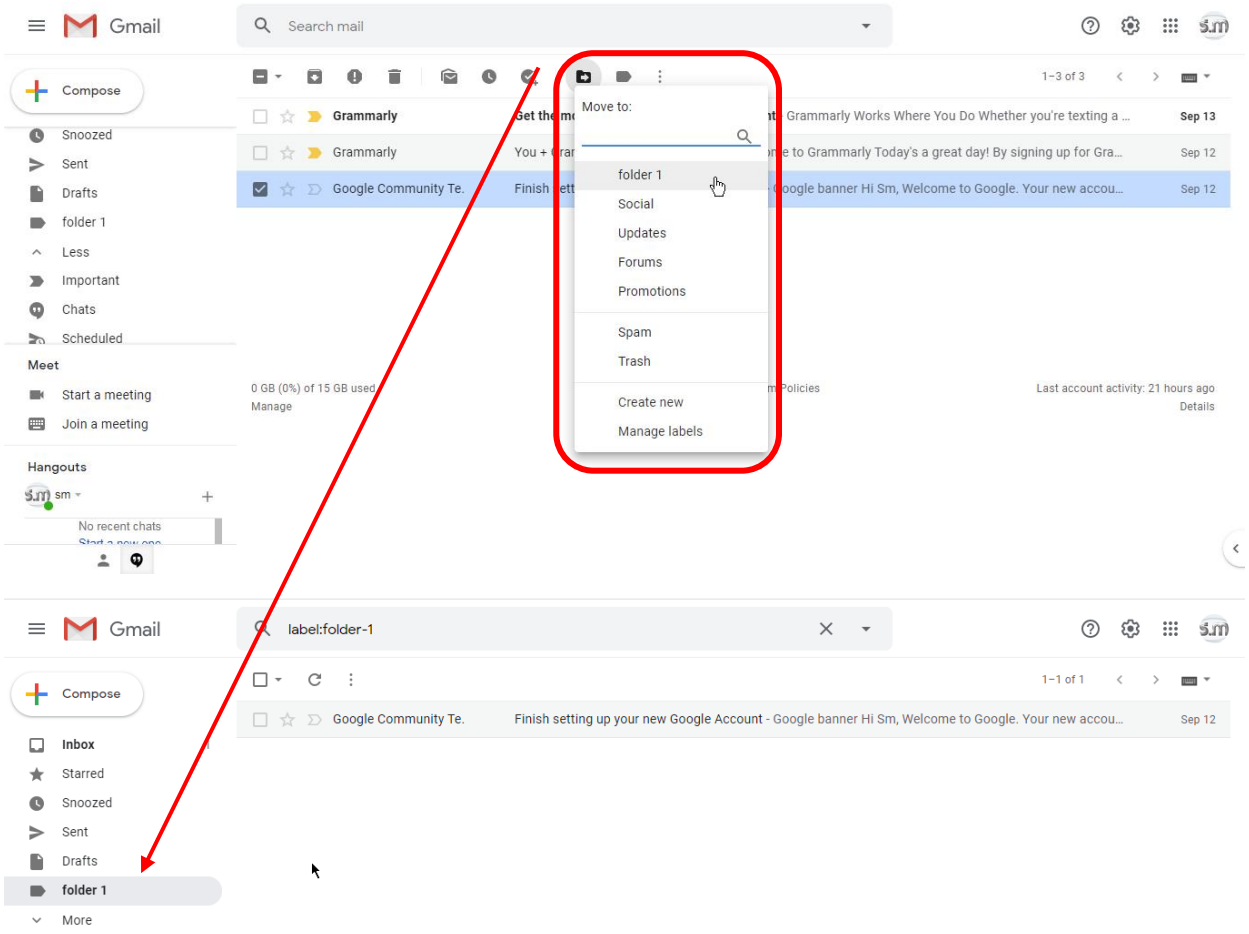

5. We will find our newly created label folder1 created inside the left side of Gmail main window

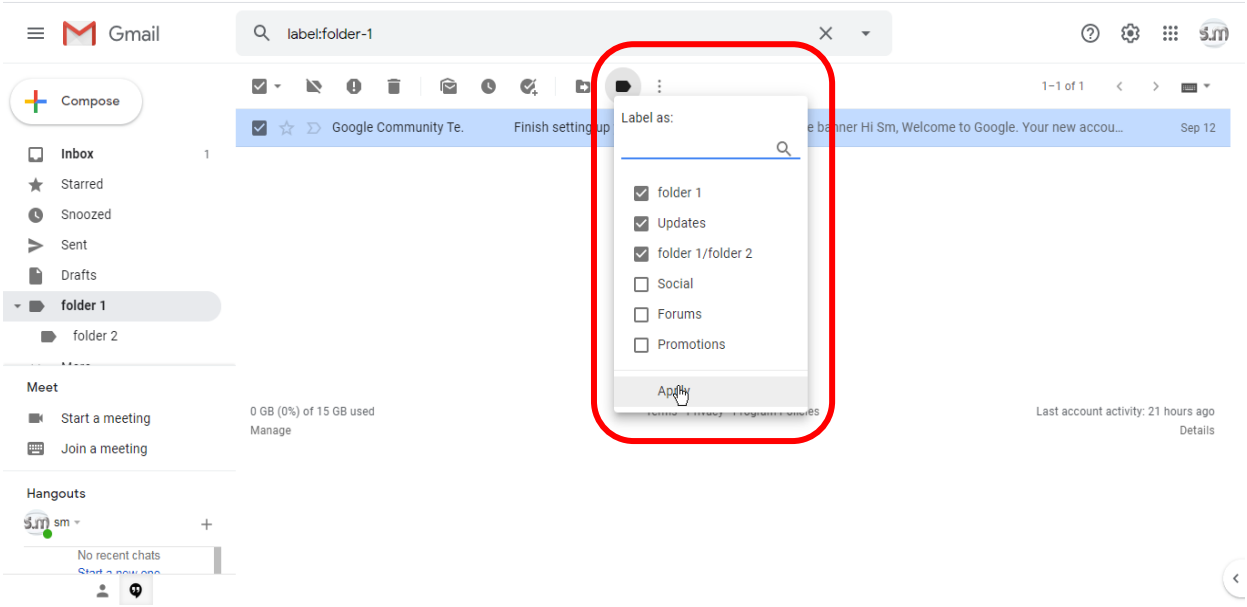

6. now we have three-way to move our message to the newly created folder or label, first we can easily drag and drop our emails inside our newly created folder or label, second to use the **move to** button, and the third to use the **labels** button.

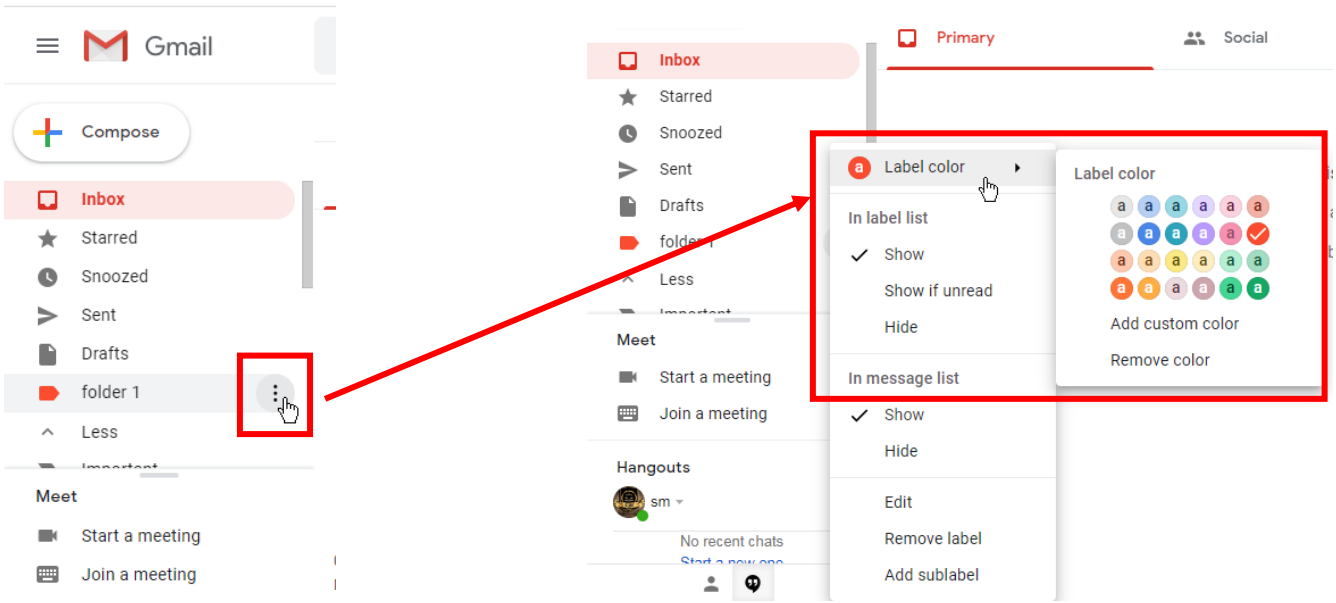

7. The first way is by selecting the moving emails and drag them to the desired folder.
8. The second way, is to use the **Move to** button , by selecting the message we like to move and press the Move to button on the upper toolbar, and this moves the message completely from its current location or inbox and places it inside our selected folder or label, and if we look there we will find our message.

9. The third method is to use the **Labels** button , and select the new label and press the **Apply** button, and this way we will apply the new label on the message and will not move it from our inbox or its current location, but this will show it in the inbox and in the new folder, and we can apply more label on the same message to let it appear in more than one location.

10. To identify This folder or label we can recolor it by clicking the three-dot menu on the label name.
11. After that, we choose label color and choose from the palette of colors the desired color for our label.

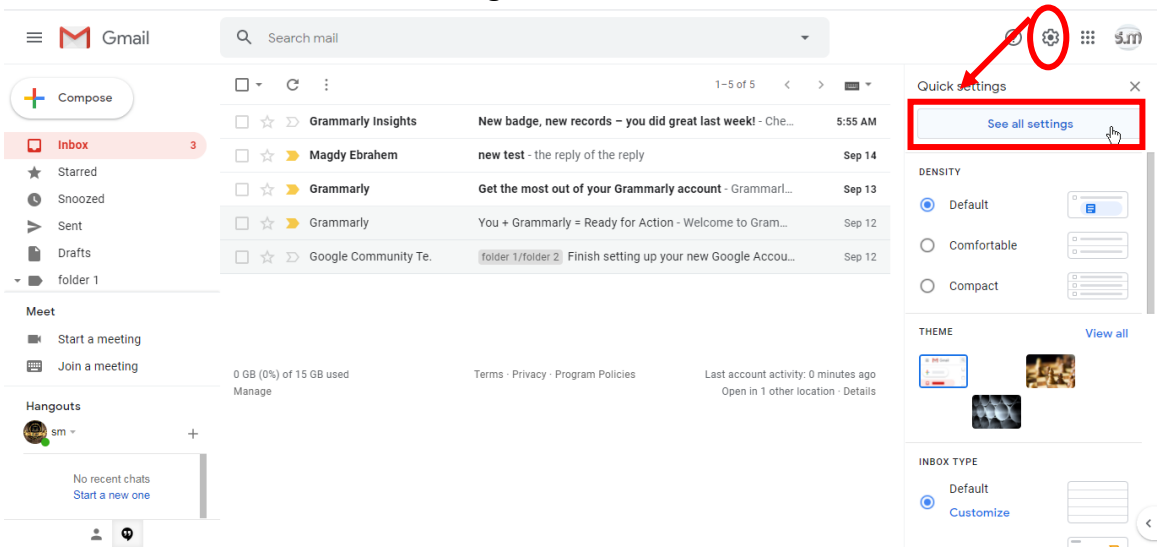

Automatic Reply or Vacation Responder in Gmail

An autoresponder automatically sends a reply to anyone who emails you, letting them know that you're gone, and when the sender can expect an actual reply. You can set up the message to say anything you want, including who to contact in your absence.

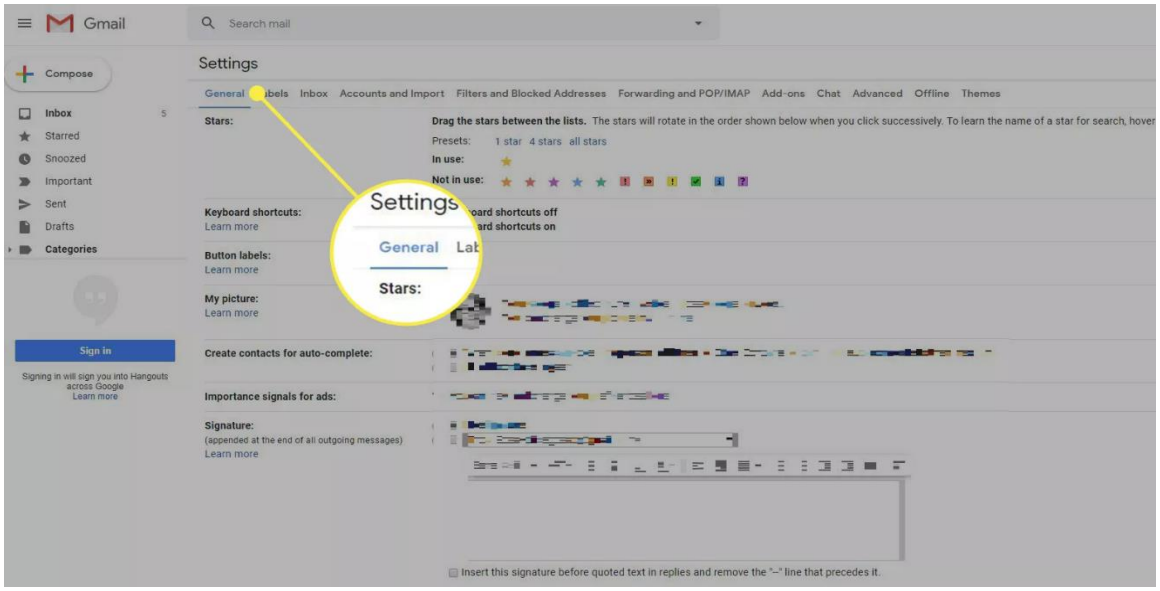

It's super handy for when you go on vacation or are otherwise away from the office.

Set Up a Vacation Responder in Gmail

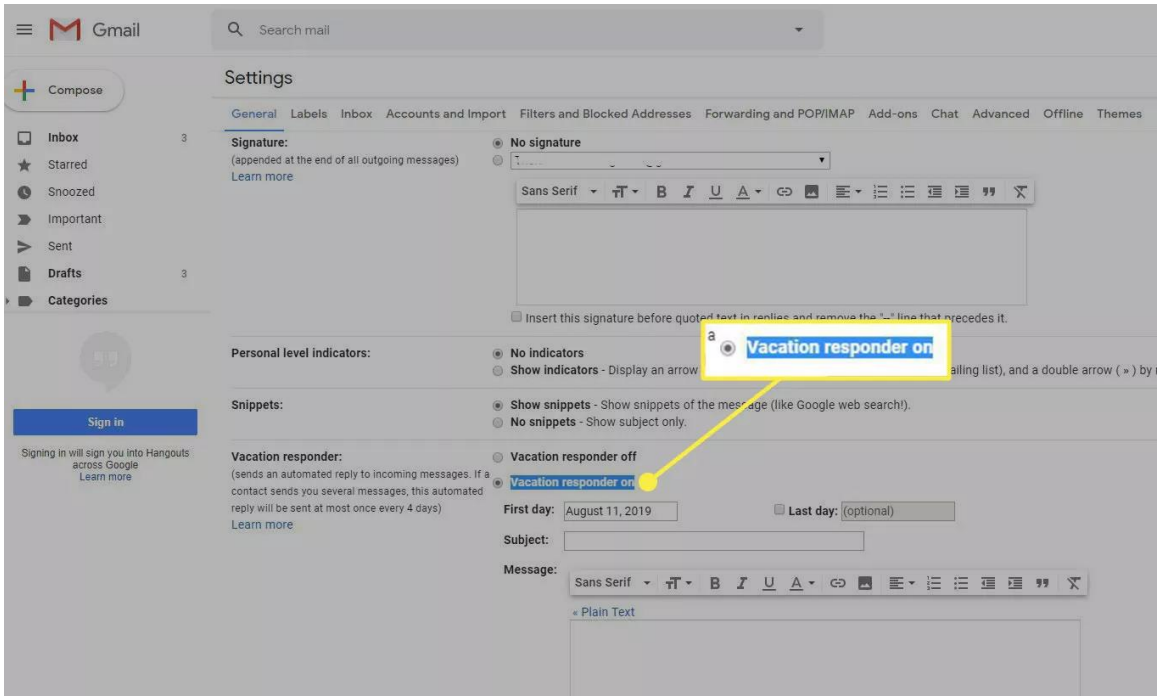

1. In Gmail, in the upper-right corner, select the **Settings** (gear) **icon**. From the menu, choose to **See all settings**.

2. Select the **General** tab.

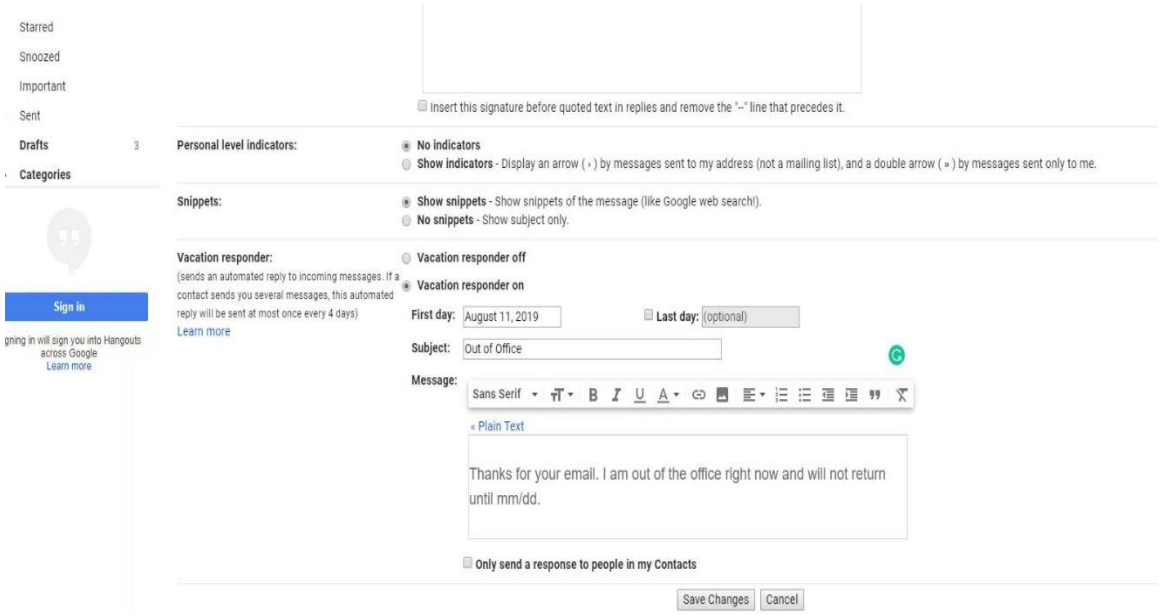

3. In the **Vacation responder** section, select **Vacation responder on**.

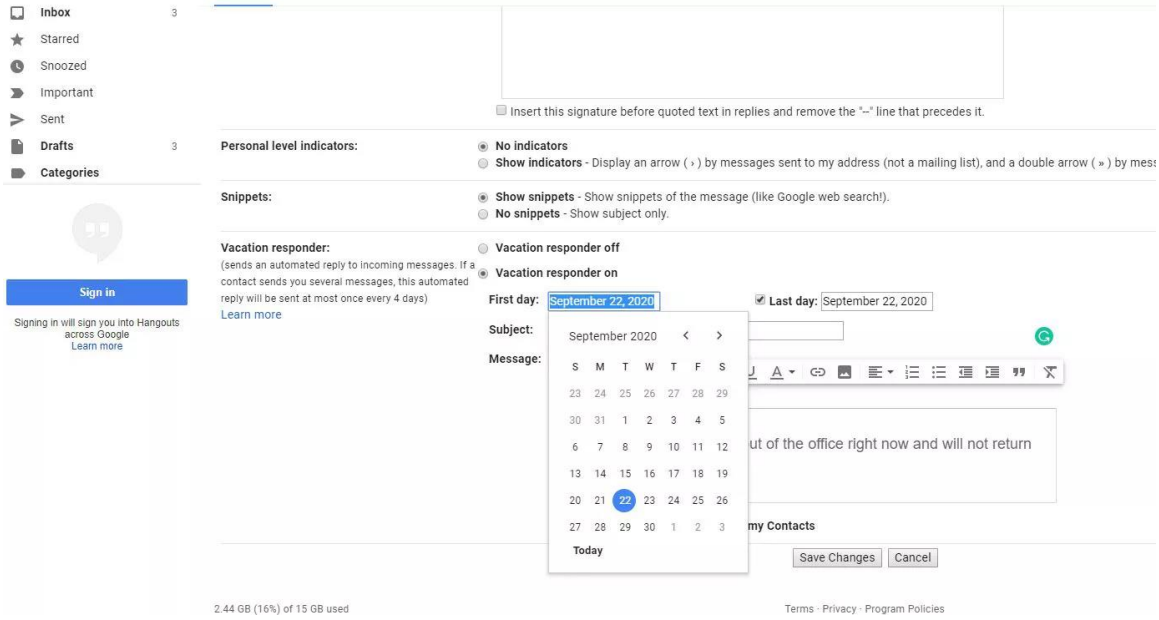

4. Enter a subject such as "Out of office" and message body text.

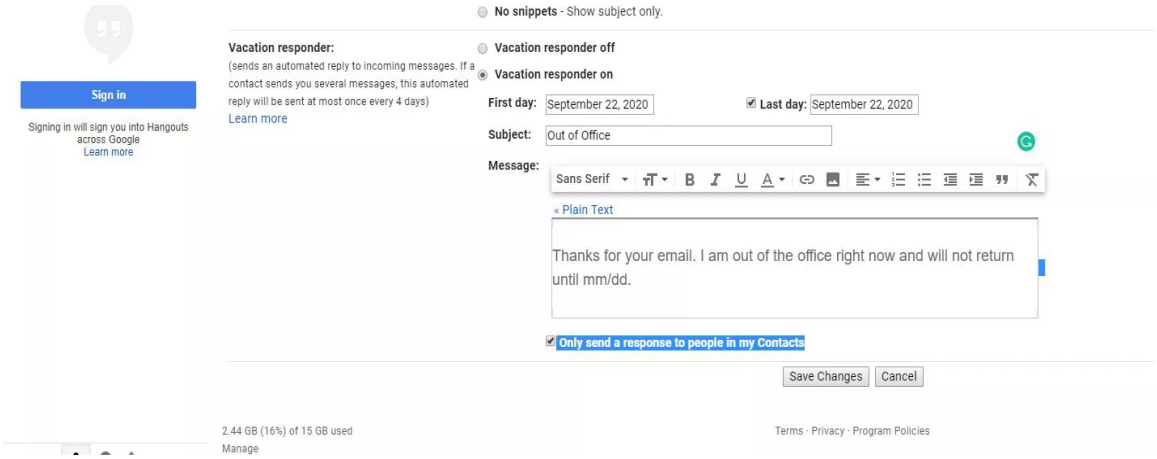

Tip: Your message should include when you'll be out, the date you'll be back in the office.

5. In the **First day** field**,** select the first date of your absence. Select **Last day** and

6. At the bottom of the screen, select **Save Changes**.

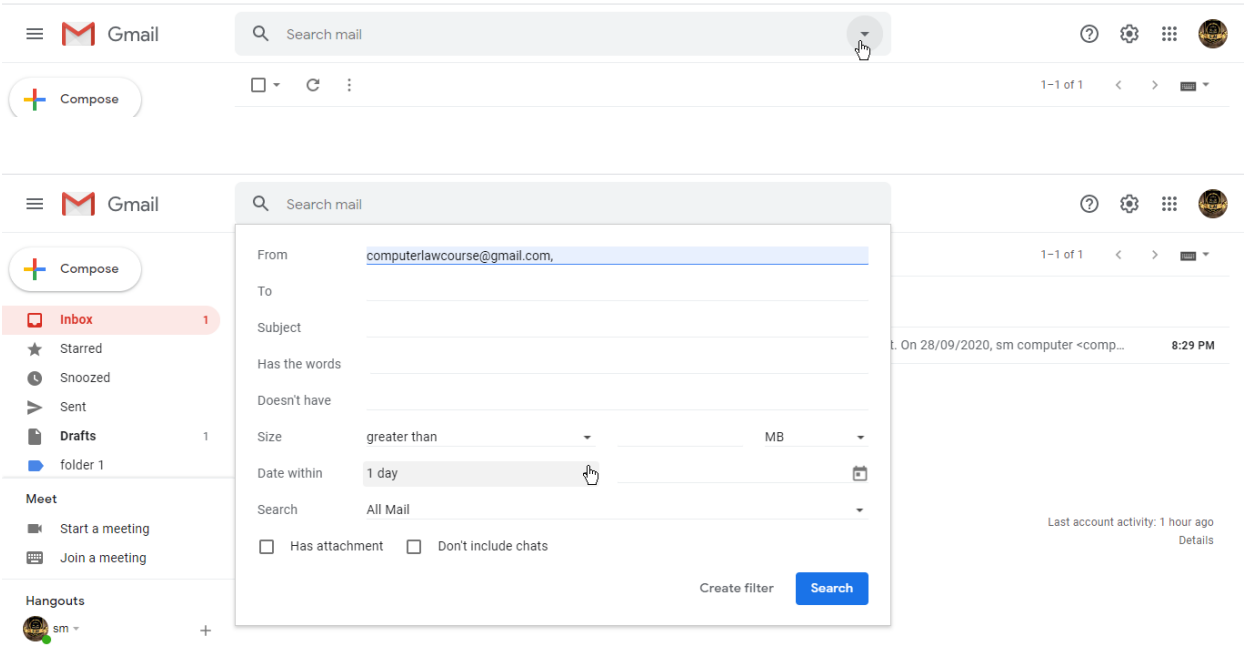

Search On Gmail

You can find an email in your inbox with search terms.

How to search

1. On your computer, go to Gmail.
2. In the Search Box at the top, enter what you'd like to find.
3. Press Enter.

PDF

Finding Text

Foxit Reader provides handy tools to find text. You can not only search text in PDFs, folders, or disks, but also in a group of pdf files. Also, you can limit your search by choosing the options offered on the Find Text dialog box to find specific items.

Finding Text in the Current PDF

To find the text you are looking for, follow the steps below:

- Type the text in the Find EditBox  at the upper right corner of the document.
- Click **Find Previous** or **Find Next** tools  to locate to relevant match.
- Foxit Reader jumps to the first instance of the search term, which appears highlighted.
- Press **Enter** repeatedly or shortcut key F3 to continue searching the next instances of the search term.

Doing Advanced Search

The search function enables you to search a string either in a single PDF file or in multiple PDF files under a specified folder. When the search finishes, all occurrences will be listed in a tree view, allowing you to quickly preview the contexts and jump to specific locations.

1. Searching Text

To search the text you are looking for, follow the steps below:

- Click **Search** tool  next to Find EditBox.
- In the Search Window right beside the Document pane, type the text you want to search for.
- Below "Where would you like to search?", check one of the following to define the searching field.
    A. To search the text in the current PDF document, select "In the current PDF document". This option will be grayed out if no document is open.
    B. To search the text in all PDF documents in specific files or disk, select **All PDF Documents in** > choose one of the disks or User-selected search paths. Foxit Reader will show the path of the currently opened document for easier location.
- Click the **Search** button.

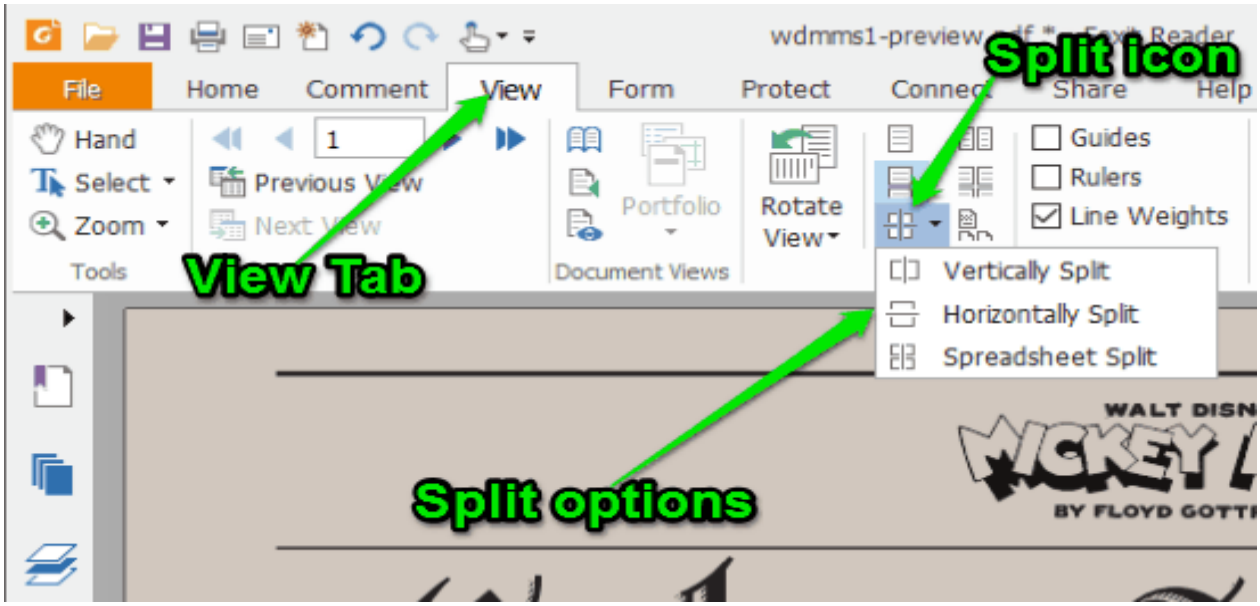

- The results appear in the page order. Each item listed includes a few words of context and an icon that indicates the type of occurrence. If necessary, click the plus sign (+) to expand the search results. Then select an instance in the results to view that instance in the PDF.
- (Optional) Click the **New Search** button to start a new search task.

Split View

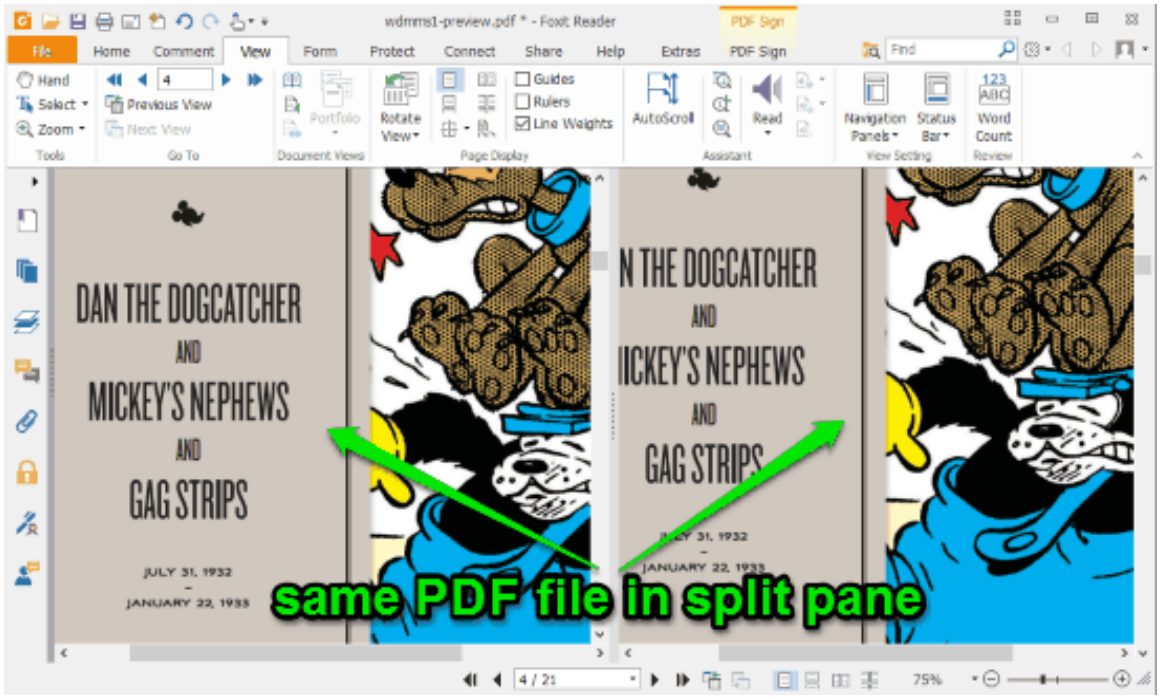

Foxit Reader allows you to open the PDF file in the split pane. it can be used to split the screen into multiple panes such that you can view the same PDF file side by side. allow you to split the screen into two different panes either vertically or horizontally.

Open the Same PDF File in Split Pane:

1. To get started, simply open Foxit Reader on your PC and then open up the PDF file which you want to open in the split pane. After that, click on the "View" tab at the top, and then on the "Page Display" section, you will see an icon named "Split".

2. Now, click on the "Split" icon, and then it will ask you to choose any of the supported split options. You can either choose **Vertically Split**, **Horizontally Split**.

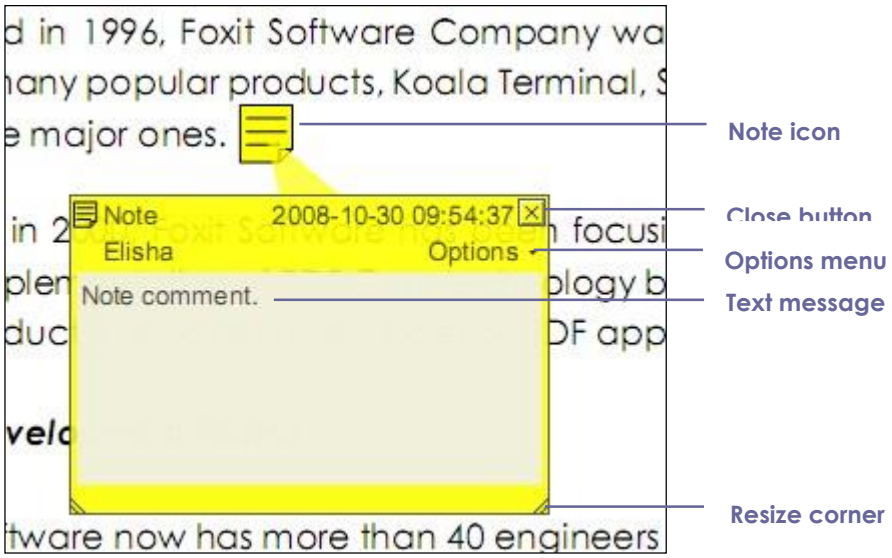

Comments

A comment is a written note intended as an explanation, an illustration, or a statement of fact or opinion, especially a remark that expresses a personal reaction or attitude. You can type a text message or add a line, circle, or other shapes to make comments on PDFs you are reading with Foxit Reader commenting tools. Most types of comments contain a pop-up window displaying your name, date, and time you created the comments and a text message. You can also edit, reply, delete, and move the comments with ease. This function is quite helpful to your studies and works if you have to make some notes on PDF documents.

Adding Note Comments

The most common type of comment is the note comments. A note comment has a note icon that appears on the page and a pop-up note for the text message. The message box could be resized and will wrap when you enter much more text. Read below to learn how to add a note comment anywhere on the page or in the document.

To Add a Note Comment

- Choose **COMMENT** > **Pin** > **Note** .
- Click where you want to place the note.
- Type text in the pop-up note. You can also use the Select Text tool to copy and paste text from a PDF into the note or copy the note with Ctrl + C to other applications.

Using the Typewriter Tools

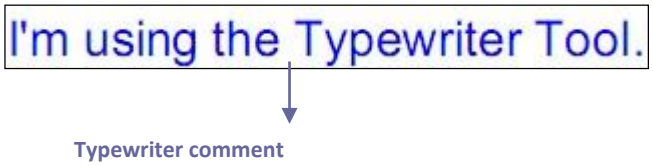

The Typewriter tools include the Typewriter tool, Callout tool, and Textbox tool.

Using the Typewriter Tool

Typewriter tool acts as a machine to produce text on PDFs by manually pressing keys consecutively on a keyboard. You can use the Typewriter tool to add comments anywhere on a PDF, which doesn't appear as annotations.

Note: *The Typewriter tool can be used to fill forms.*

See also "Filling non-interactive forms".

Adding Comments with Typewriter

- Choose **COMMENT** and click Typewriter tool.
- Put the pointer on the area to type any text you want.
- Press **Enter** if you want to start a new line.
- To finish typing, click anywhere outside the text you have inputted.

Setting Typewriter Preferences

Click the Typewriter tool on the toolbar, choose the **COMMEN FORMAT** context tab to expand typewriter setting toolbars, and then you can set the font style, size, color, and alignment of the text.

1. Modifying the current font style, size, and color of the typewriter

- To modify the font style, drop down the Font list box, and select the font you want.

- To modify font size, drop down the Font Size list box on the Typewriter toolbar, and select an ideal size for your text.
- To set a typewriter font as default, just choose the right font and color. When you close out of the program, it will save that, and it will default to that you saved before when you open the program.
- To change the color of the current typewriter font, click the Color button  on the Typewriter toolbar, and select a color as needed.
- To apply the bold formatting to the current typewriter font, click the Bold button  on the Typewriter toolbar.
- To apply the Italic formatting to the current typewriter font, click the Italic button  on the Typewriter toolbar.
- To cross out the text, select the text to be crossed out and click the Strike button  on the Typewriter toolbar.
- To underline the text, select the text to be underline and click the Underline button  on the Typewriter toolbar.
- To add superscript or subscript to the text, click the Superscript button  or Subscirpt button  correspondingly on the Typewriter toolbar.

2. Aligning text

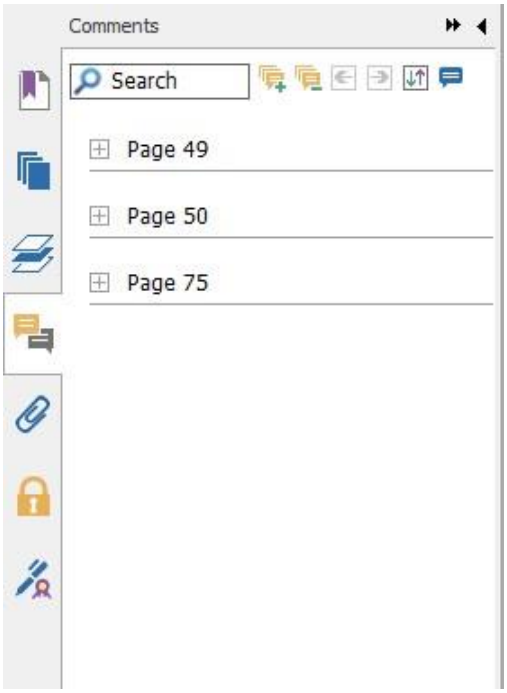

You can set the alignment of any inputted text using the text-align buttons. These buttons can be used to set the alignment for text in multiple lines.

- To align text to the left, click the **Align Left** button  on the Typewriter toolbar.
- To center text, click the **Center** button  on the Typewriter toolbar.
- To align text to the right, click the **Align Right** button  on the Typewriter toolbar.

Working on Comments

Viewing Comments

- To view comments in the Comments panel, please go to **VIEW** > **View Setting** > **Navigation Panels** > **Comments**.

Comments Panel

In the Comments panel, there are several options as follows:

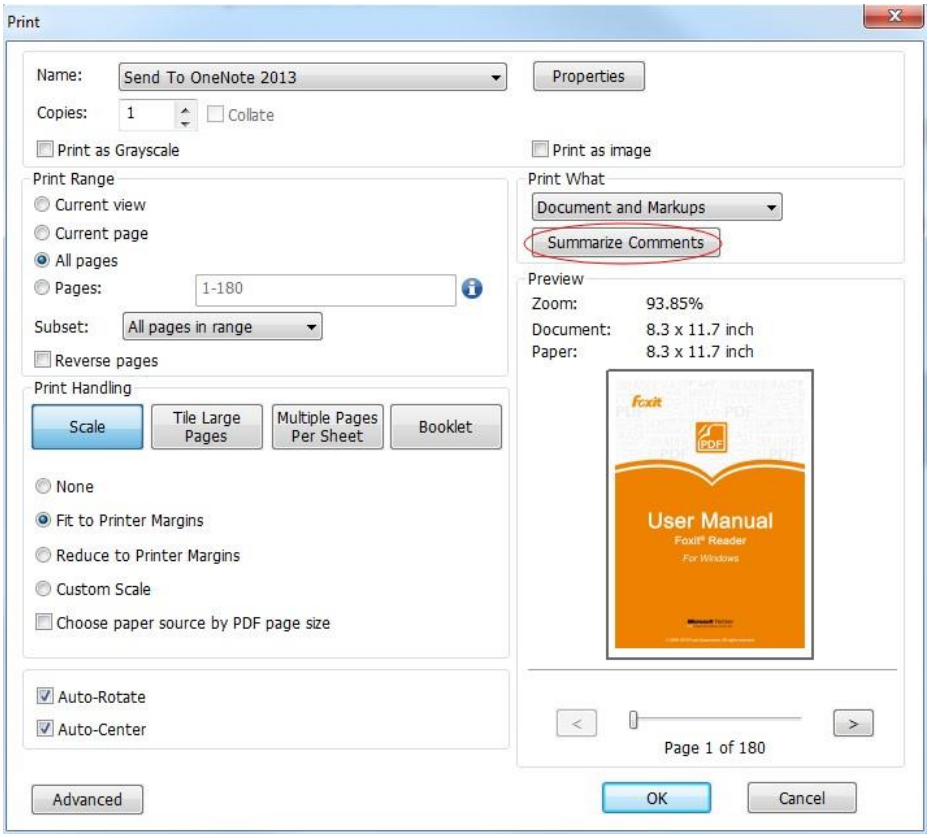

Expand All – expands all of the items listed on the Comments panel.
Collapse All – collapses all of the items in the view.
Next – goes to the next comment if you choose to expand all the items.
Previous – goes to the previous comment if you choose to expand all the items.
Sort By – selects to sort the comments by type, page, author or date, status, or checkmark status.
Show/Hide Comments —select Hide all comments or Show all comments to hide or show all comments as needed.

Printing Comments

Foxit Reader allows users to print the document together with the content of the attached notes.

To print texts created by comment tools, please choose **FILE** > **Print** > click **Summarize Comments**.

A window will pop up asking you whether to print the summarized comments in the current document, click **Yes** to continue printing.

Creating Bookmarks

Bookmarks are navigational tools that make your PDF files easier to read. They are usually generated automatically during PDF creation. Bookmarks in PDF files provide interactive links to a specific destination. The reader just needs to click on a bookmark to view the page in which the bookmark is linked.

Bookmarks are useful for users to mark a place in a PDF file so that users can return to it with ease. Or you may like to have your own bookmark structure and new bookmark names. Now with Foxit Reader, you can easily nest, edit, or delete bookmarks in a PDF file if the security settings allow.

Adding a Bookmark

1. Go to the page where you want the bookmark to link to. You can also adjust the view settings.
2. Use the Hand tool  to create the bookmark:
   - To bookmark a portion of a page, adjust the view of the document if necessary, and move the portion into the center of the window.
   - To bookmark selected text, use the Select Text tool  , right-click the selected text and choose **Bookmark** or press Ctrl+B.
3. Select the bookmark under which you want to place the new bookmark. If you don't select a bookmark, the new bookmark is automatically added at the end of the bookmark list.

4. Click the New Bookmark icon  at the top of the Bookmarks panel, or right-click the selected bookmark and choose **Add Bookmark**.
5. Type or edit the name of the new bookmark and press **Enter**.

Moving a Bookmark

Select the bookmark you want to move, and then do one of the following:

- Hold the mouse button down and then drag the bookmark icon directly next to the parent bookmark icon. The Line icon shows the place where the icon will be located.
- Right-click the bookmark icon and choose the **Cut** option > right-click the parent bookmark, and choose **Paste after Selected Bookmark**.

Note: *The bookmark links to its original destination in the document although it is moved.*

Organizing a Bookmark Hierarchy

A bookmark hierarchy is an outline or stratified structure that places some bookmarks within others. It is an efficient way to display a comprehensive list of bookmarks in a PDF file. In Foxit Reader, multilevel bookmark hierarchy can be defined by properly dragging the bookmark icon in the Bookmark Panel.

Nesting a Bookmark

Select the bookmark you want to nest, and then do one of the following:

- Hold the mouse button down and then drag the bookmark icon directly underneath the parent bookmark icon. The Line icon shows the place where the icon will be located.
- Right-click the bookmark icon and choose the **Cut** option > right-click the parent bookmark, and choose **Paste under Selected Bookmark**.

Note: *The bookmark links to its original destination in the document although it is nested.*

Moving a Bookmark out of Nested Position

Select the bookmark you want to move, and then do one of the following:

- Hold the mouse button down and then drag the bookmark icon directly next to the parent bookmark icon. The Line icon shows the place where the icon will be located.
- Right-click the bookmark icon and choose the **Cut** option > right-click the parent bookmark, and choose **Paste after Selected Bookmark**.

Note: *The bookmark links to its original destination in the document although it is nested.*

Expand or Collapse a Bookmark

- Click the plus sign (+) left to the bookmark icon to show any children. Click the minus sign (-) to collapse the list.
- To select the bookmark for the displayed page of the PDF document, click **Expand the Current**

  Bookmark button  at the top of the Bookmarks panel.

Printing

Printing is a process for reproducing text and images. When you have finished reading a helpful article or designing a PDF form, you may need to send it to an inkjet or laser printer and print it out with custom page sizes. With this section, you can get the help to set options in the Print dialog box to ensure that the finished document appears as intended.

Printing a PDF Document

1. Make sure you have installed the printer successfully.
2. Click the **Print** button on the toolbar, or choose **Print** from the **FILE** page.
3. Specify the printer or plotter, page range, number of copies, and other options.
4. Click **OK** to Print.

Printing a Portion of a Page

To print a portion of a page, you need to refer to the SnapShot tool SnapShot .

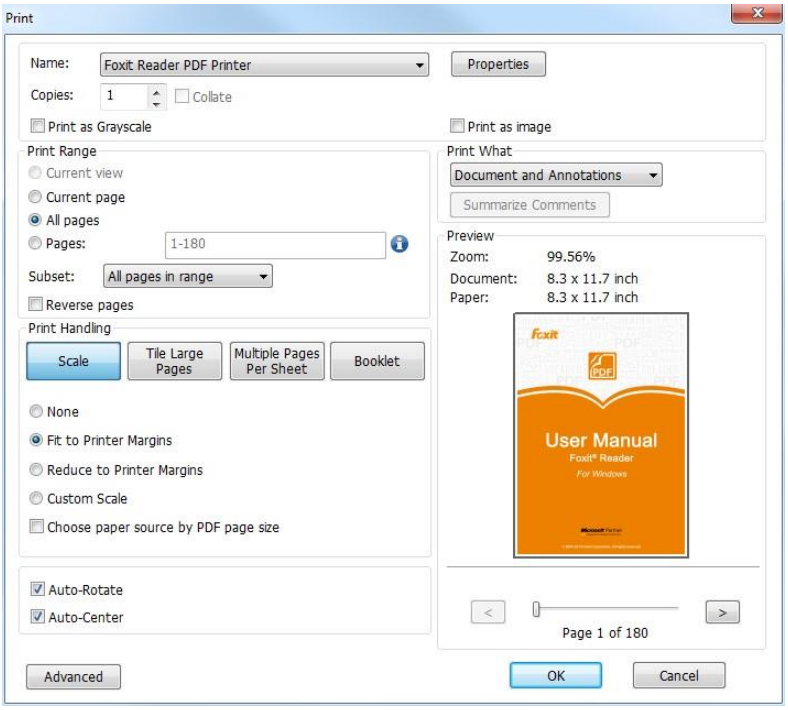

- Choose **HOME** > **Tools** > **SnapShot** SnapShot .
- Drag around the area you want to print.
- Right-click in the selected area > choose **Print**, and then refer to the Print Dialog.

Print Dialog

The print dialog is the final step before printing. You can modify the printer in this dialog as well. Be aware that changing the printer may affect the page setup if the newly selected printer has a different paper size, for instance.

The Print dialog allows you to make several changes about how your document prints. Follow the step-by-step descriptions in **Print** dialog box.

To open the **Print** dialog box, choose **FILE** > **Print**.

The Print Dialog Box

- Name -- You can select your printer from the list of installed printers. To configure advanced options of the printer, click on the Properties button. This will display printer-specific options.

- Print Range – This option lets you print different parts of a PDF document. You can specify to print all pages or some certain ones.

  All pages– Prints all pages of a PDF document.

  Current view – Prints the page area (including text, comments, images, tables, or a combination of all of them) that is visible in the current view.

  Current page – Prints the page that is visible in the current view.

  Pages – Specifies the range of pages to print separate pages in the PDF. Enter page numbers and/or page ranges separated by commas. For example, 1,3,7-10.

- Subset – Provides options for setting a noncontiguous page range.

  All Pages in Range – Prints all the pages within the specified range.

  Odd pages only – Prints only pages with odd numbers within the specified range.

  Even pages only – Prints only pages with even numbers within the specified range.

Note: *This option is especially helpful for two-sided printing.*

- Reverse pages – Prints pages in reverse order. If page ranges are entered, the pages print opposite of the order in which they were entered. For example, if you select to print the document from page 5 to page 30, selecting the Reverse pages option will print page 30 to page 5.

- Copies – Sets the number of copies you want to print.

- Collate – Assembles the printouts in a proper numerical or logical order when printing several copies. This option will be disabled when printing just one copy.

- Scale – Sets the scaling during printing, including the following five options:

    A. **None**: Prints the pages without scaling.
    B. **Fit to Printer Margins**: Scales small pages up and large pages down to fit the paper.
    C. **Reduce to Printer Margins**: Reduces large pages to fit the paper.
    D. **Custom Scale**: Resizes the pages by the percentage you specify.
    E. **Choose Paper Source by PDF page size**: Automatically chooses paper source according to PDF page size.

- Tile Large Pages: To tile the pages which are larger than the selected paper size at a specified scale.

    A. **Page Zoom**: Scales the pages by the percentage you specify.
    B. **Overlap**: Sets the amount that each tile overlaps the adjacent tiles (unit: cm).
    C. **Cut Marks**: Adds cut marks to each page to help you trim the overlap.
    D. **Labels**: Adds the name of the document and page number on each tile.

- Multiple Pages Per Sheet: Allows you to print multiple pages in one sheet.

    A. **Pages per sheet**: Choose a predefined number of pages or custom the number of pages to be printed in one sheet. If you select a predefined one from the drop-down menu, Foxit Reader will automatically select the best paper orientation; otherwise, Foxit Reader will let you define the orientation as required.
    B. **Page Order**: Defines how the pages are ordered on the paper, including Horizontal, Horizontal Reversed, Vertical and Vertical Reversed.
    C. **Margins**: Sets the margins for printing.
    D. **Print Page Border**: Check this option to print pages with page border.

- Booklet: Allows you to print PDFs in booklet format.

    A. Binding: Sets the binding direction, including Left and Right.
    B. Booklet subset: Choose Front or Back if you only want to print one side of each sheet of paper, choose Both to print PDFs in double-sided booklet format.
    C. Margins: Sets the margins for booklet printing.

- Auto-Rotate – Adjusts the PDF document's orientation to match the orientation specified in the printer properties.

- Auto-Center – Places the PDF pages in the center.

- Print What – Specifies to print documents only, annotations only or both.

  Document – Prints the document contents without annotations.
  Document and Annotations – Prints document contents and annotations.
  Annotations – Prints annotations only.

- Preview -- Foxit Reader provides an instant preview in the Print dialog box.

- Print as an image—To print the PDF document as an image.

- Print as Grayscale – To print the PDF document with color images, texts, or other objects as shades of gray.

  For example, RGB or CMYK image-only PDFs, in particular, can be quite large. Converting these PDFs to grayscale can reduce the size of the file and increase the speed of printing.

Print as normal

Print as Grayscale

Keyboard Shortcuts

There are some keyboard shortcuts that you can use to speed up your navigation within the Foxit Reader. Some particularly important ones are listed here:

File Keys

Action	Shortcut
Open File	Ctrl + O
Close File	Ctrl + W, or Ctrl + F4
Save As	Ctrl + Shift + S
Close All	Ctrl + Shift + W
Print Document	Ctrl + P
Exit Foxit Reader	Ctrl + Q
Save	Ctrl + S

View Keys

Action	Shortcut
Full Screen	F11
Zoom In	Ctrl + Num +
Zoom Out	Ctrl + Num -
Zoom To	Ctrl + M
Actual Size	Ctrl + 1
Fit to Page	Ctrl + 0
Fit Width	Ctrl + 2
Fit Visible	Ctrl + 3
Rotate Clockwise	Ctrl + Shift + Plus

Rotate Counterclockwise	Ctrl + Shift + Minus
Reset Toolbars	Alt + F8
Hide Toolbars	F8
AutoScroll	Ctrl + Shift + H
Stop AutoScroll	ESC
Show or hide Navigation pane	F4
Show or hide Menu Bar	F9
Switch between tabs	Ctrl + Tab

Edit Keys

Action	Shortcut
Copy	Ctrl + C, or Ctrl + Insert
Find Text	Ctrl + F
Find Next	F3
Find Previous	Shift + F3
Preferences	Ctrl + K
Undo	Ctrl + Z
Redo	Ctrl + Shift + Z

Select Text Tool Keys

Action	Shortcut
Copy	Ctrl + C
Select All	Ctrl + A
Add Bookmark	Ctrl + B

Tool Keys

Action	Shortcut
Hand Tool	Alt + 3
Select Text	Alt + 6
Snapshot	Alt + 7
Exit Full Screen Mode	ESC, F11
Switch to Text Viewer	Ctrl + 6

Document Keys

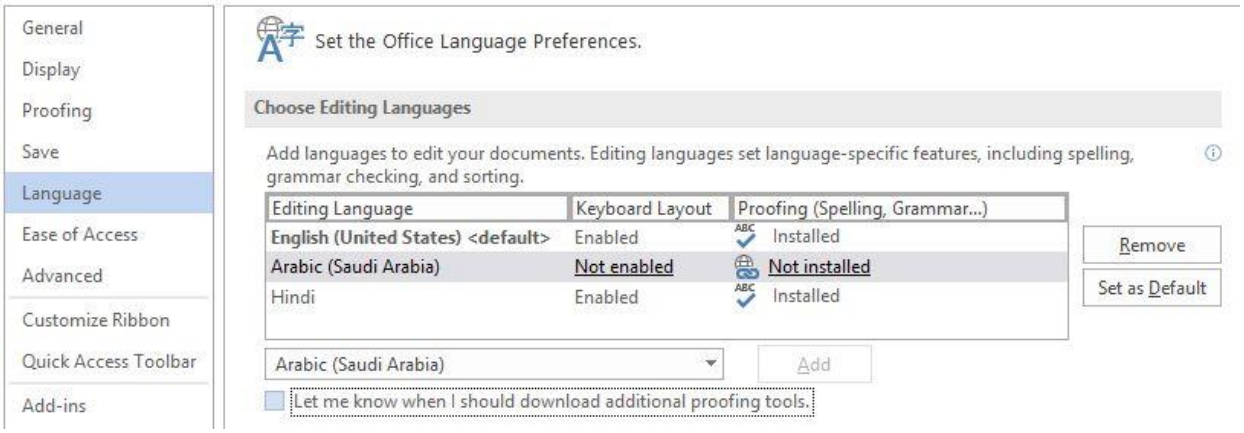

Action	Shortcut
Previous Page	Ctrl + Page Up
Next Page	Ctrl + Page Down
First Page	Ctrl + Home
Last Page	Ctrl + End
Go to Page	Ctrl + G
Select All	Ctrl + A
Page Down	Space
Page Up	Shift + Space

WORD

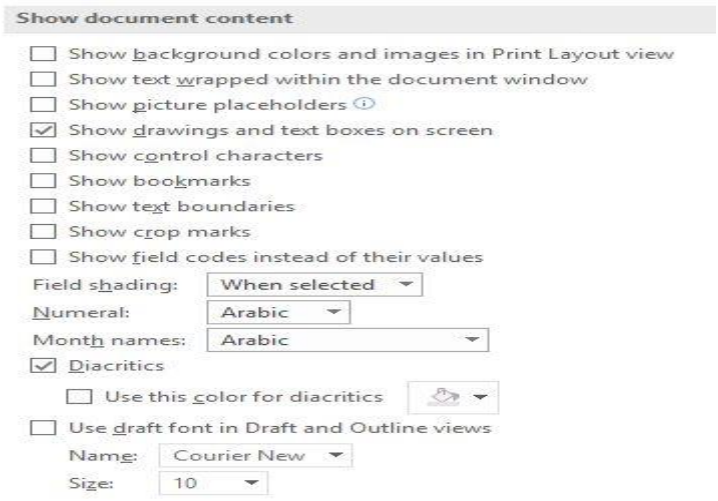

Arabic Numbering

If you have a Word document that has two parts: one English and one Arabic, and you want the numbers are English numbers [0123456789], and the Arabic part's numbers to be Arabic [٠١٢٣٤٥٦٧٨٩].

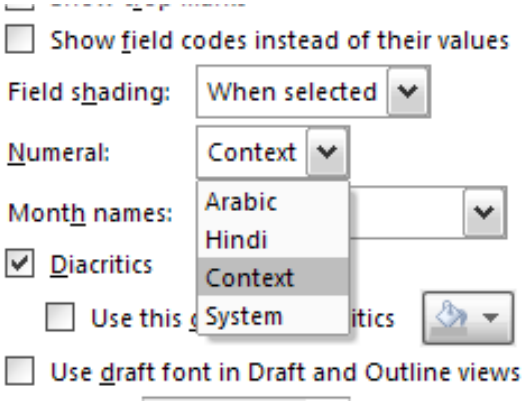

1. Go to Menu - **File - Options - Languages**
2. In [**Add additional Editing Languages**] open the drop-down box, select some version of Arabic (say Arabic Saudi Arabia).
3. Click on the **Add** button at the right, which will add the language in editing languages.

4. It will then ask to restart the word. Let it, Once the word reopens.
5. Go to **File > Options**.
6. From this window select **Advanced** on the left side.
7. Scroll down until you find the **Show document content** section.
8. you will find the **Numeral** option.

9. Set it to **Context**.
10. If you want Arabic Number Select **Hindi**, and if you want English Number Select **Arabic**.

Enabling AutoRecover

If you hate losing work (and most of us do), make sure that the AutoRecover feature is active and set to a relatively short save interval. Most users set up AutoRecover to save the necessary information every 10 minutes or less, AutoRecover attempts to recover your documents only if Word crashes or you otherwise forget to save something. It does not automatically do a normal save of your document. Saving your document is up to you.

The AutoRecover feature is enabled by default, Here's how to set up as you prefer:

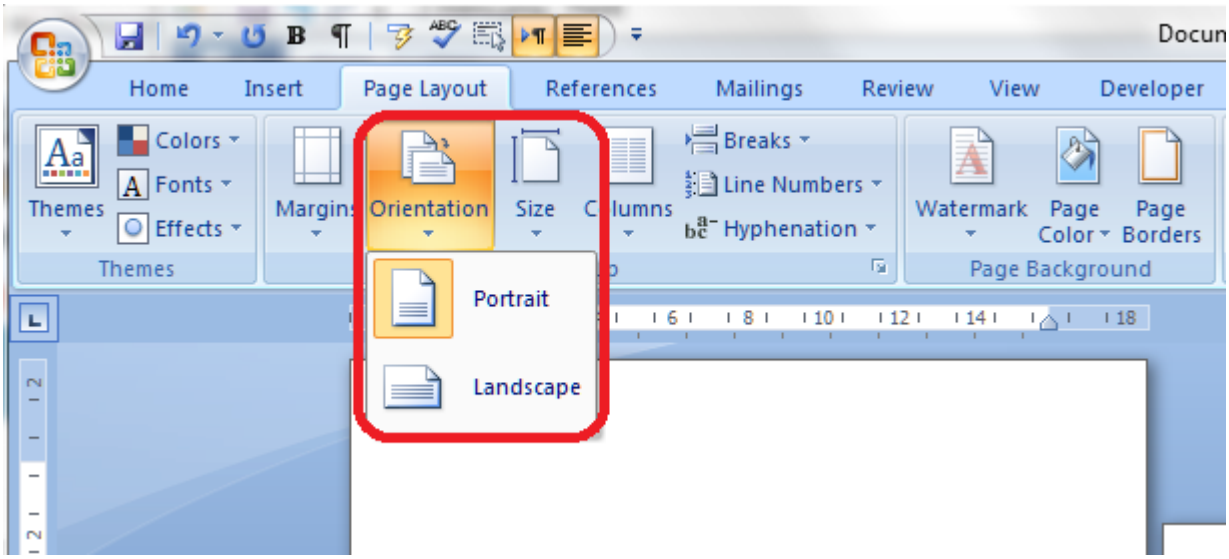

1. C lick **file > options > Save.** The AutoRecover settings appear in the Save documents section of the displayed tab in the Word Options dialog box.
2. Make sure that the Save autorecover information every check box is checked.
3. If needed, change the minutes text box entry beside Save autorecover information every to adjust the save interval.
4. Make sure that the keep the last autosaved version if I close without saving check box is checked
5. Click ok to close the Word options dialog box.

2- Page Design

Orientation

Orientation refers to whether the page is laid out horizontally (landscape) or vertically (portrait-the default orientation).

To change the document orientation, click Orientation in the Page Setup group of the Page Layout tab, and click either Landscape or Portrait as needed.

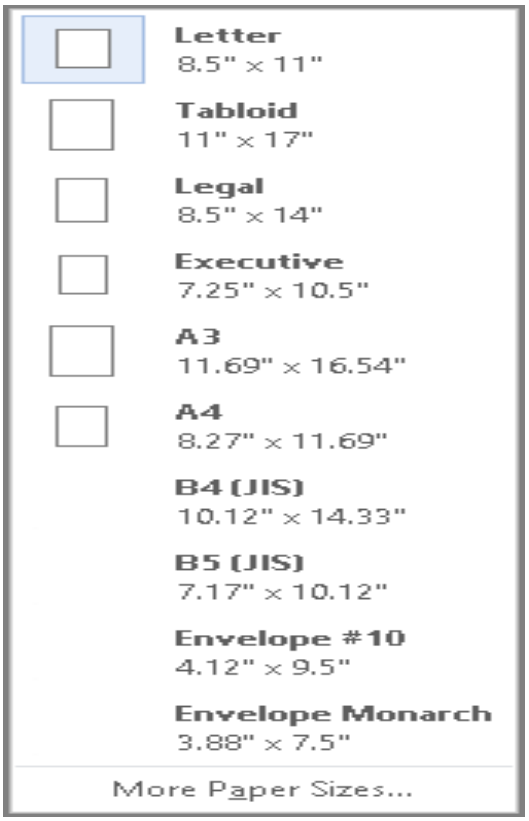

Size

The Size choice in the Page Setup group of the Page Layout tab refers to paper size. Click the Size button display a gallery of preset standard sizes, shown in Figure 3.2.

FIGURE 3.2

Click a preset paper size

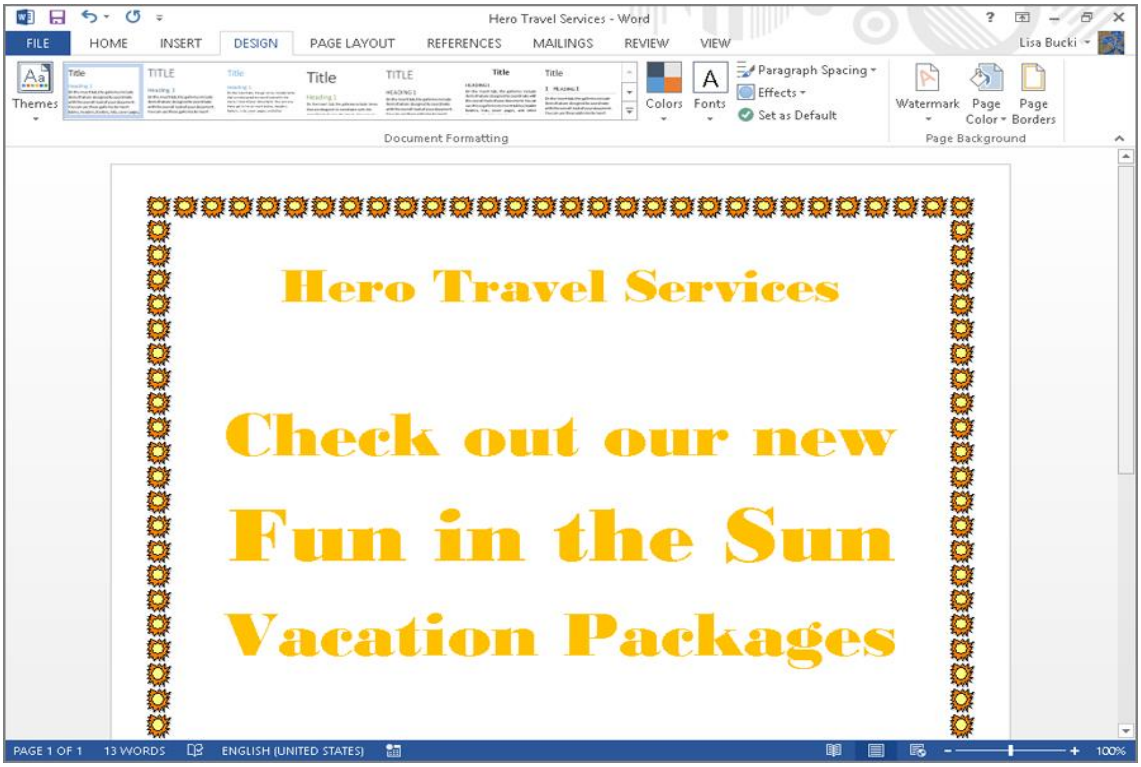

Adding and Removing Page Borders

A page border is a line, a set of lines, or decorative artwork that appears around the perimeter of the page as in the border for the flyer in Figure ٤.1

FIGURE 4.1

For page borders, you can insert a variety of lines or choose from dozens of built-in art borders.

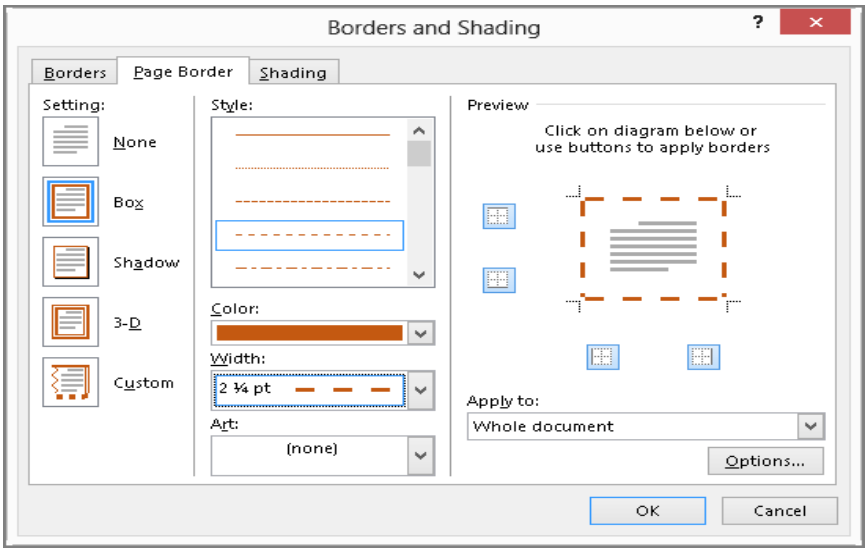

To insert a page border:

1. Click the **Design** tab, and then click **Page Borders** in the Page Background group. (Refer to Figure 4.1). The Borders and Shading dialog box shown in Figure 4.2 appears.
2. Click an overall border type under Setting at the left.

FIGURE 4.2

Choose page border settings in the Page Border tab of the Borders and Shading dialog box.

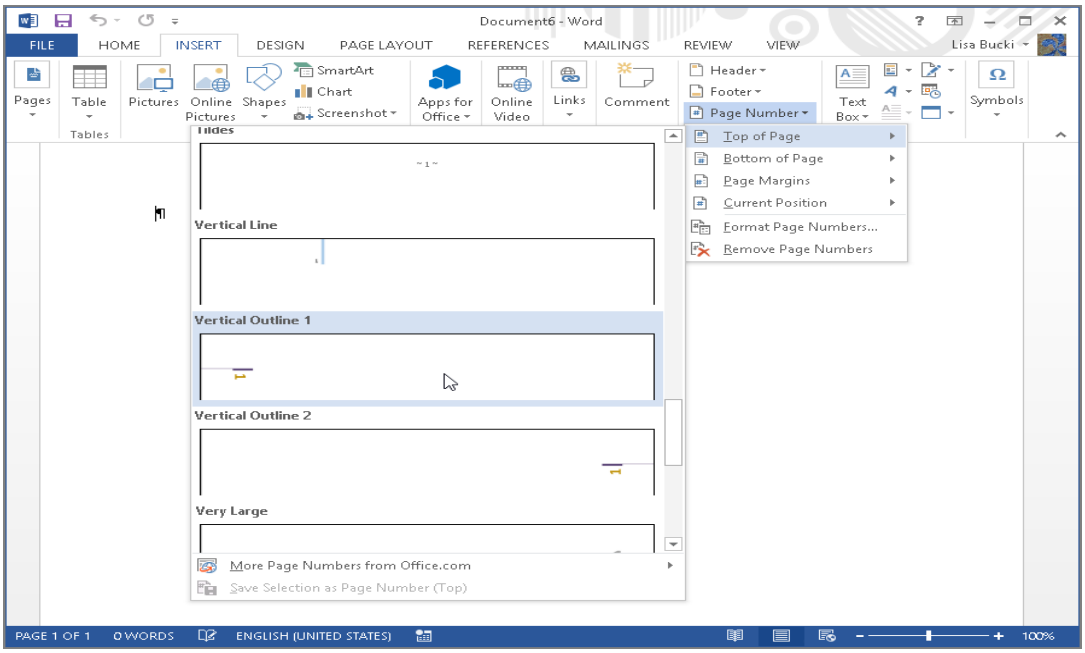

3. In the center of the dialog box, pick a border Style, Color, and Width: alternately, open the Art drop-down list, scroll to find the style of border art to use, and click it.
4. Click Ok twice to close the two open dialog boxes and apply the page border settings.

Inserting page numbers

In the **Insert** tab's Header & Footer group, click **Page Number** to open its drop-down list, as shown in Figure 5.1, and choose Top of Page, for example. Scroll down the choices as needed, and click the one to insert. Word opens the header and footer layer and displays the inserted page number.

FIGURE 5.1

Word 2013 has extensive galleries with a variety of page number formats from which to choose.

Deleting page numbers

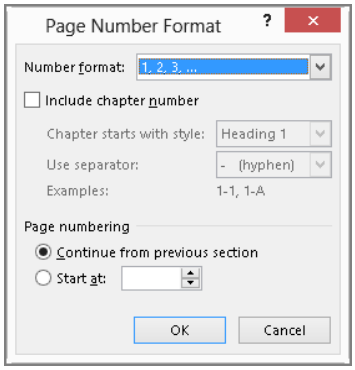

To delete page numbers, move to the document section that contains the numbering you want to remove. In the Header & Footer group of the **Insert** tab, click **Page Numbers > Remove Page Numbers**.

Formatting page numbers

You can choose the page numbering format before or after you insert a page number. On the **Insert** tab, choose **Page Number > Format Page Numbers** to display the Page Number Format dialog box, shown in Figure 5.2

FIGURE 5.2

Word provides flexible page numbering options.

Page Number Options	
Option	**Purpose**
Number format	Specifies numbering scheme: 1, 2, 3; A, B, C; a, b, c; I, II, III
Start at	Use this to specify a starting number other than

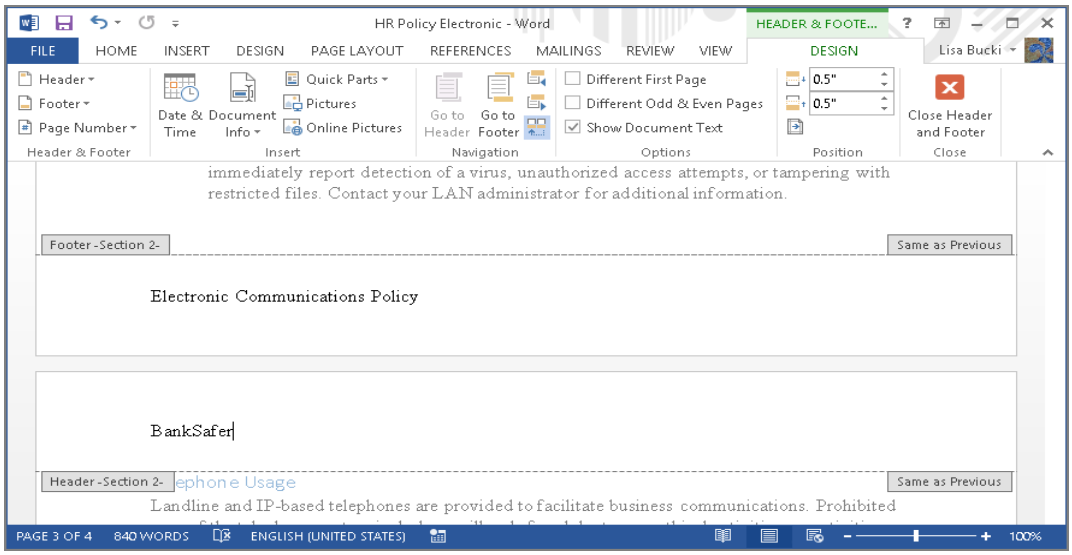

Headers and Footers Overview

headers and footers are the areas in the top and bottom margins of each page this means that in addition to titles, page numbers, dates headers and footers can contain things such as watermarks, logos

To access those areas, double-click where you want to edit This brings the header and footer areas to the surface, as shown in Figure 6.1

FIGURE 6.1

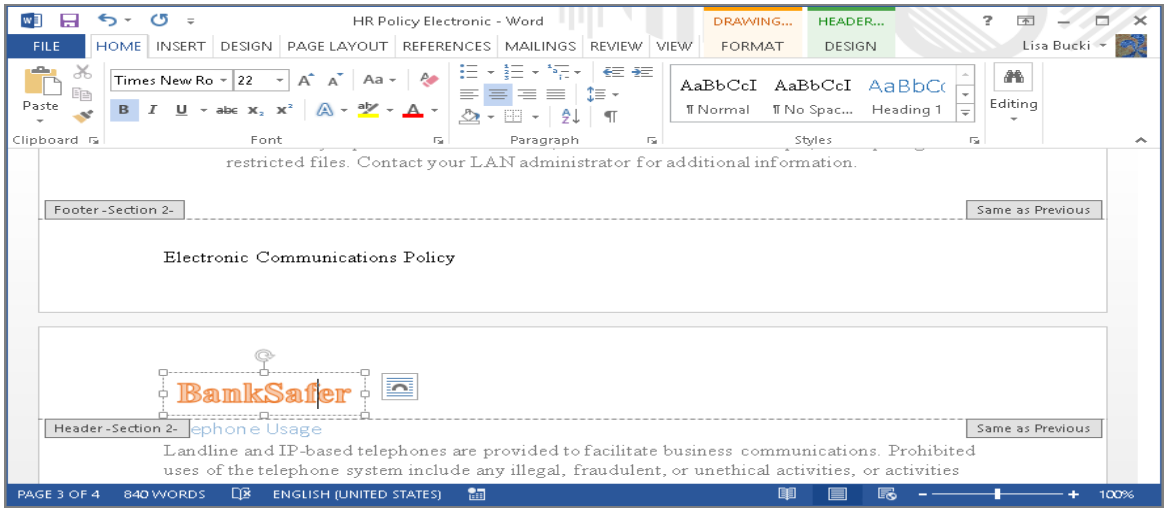

With headers and footers open for editing, the document body text turns gray.

You can put a variety of things into headers and footers, ranging from file names and title, date) to page numbers.

Adding header and footer graphics:

Just Double click on the header or footer and choose insert Picture From the Insert Tab.

3- Text Format

Paragraph formatting

You can apply paragraph formatting using a wide variety of paragraph attribute buttons and tools. Many of those attribute controls can be found in the Paragraph group in the Home tab, shown in Figure 9.1

FIGURE 9.1

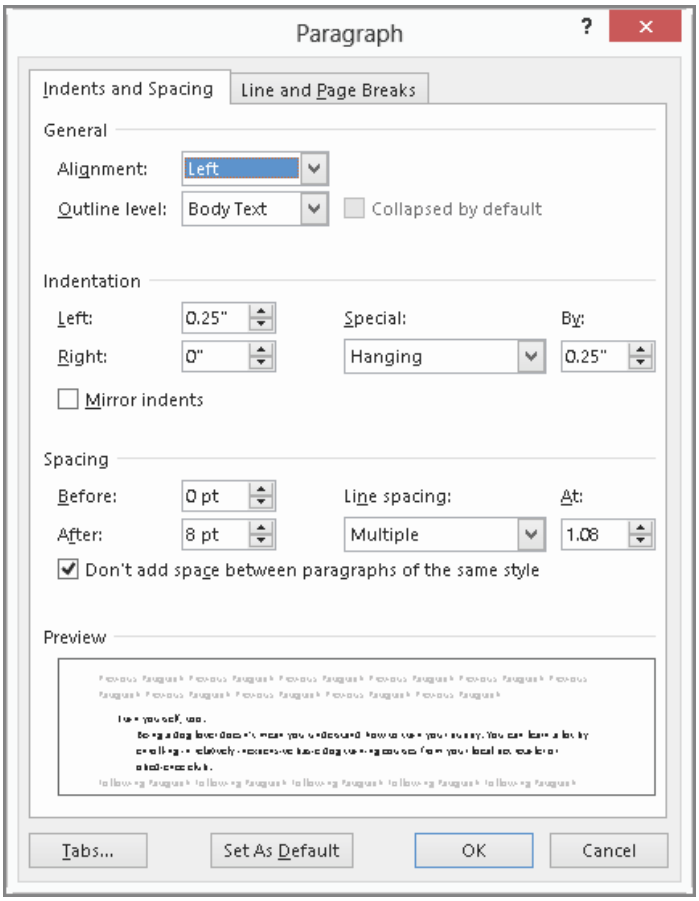

The Paragraph sections in the Home contain a number of paragraph- formatting controls.

Many paragraph attributes are also found in the Paragraph dialog box, shown in Figure 9.2 You can display the Paragraph dialog box by clicking the dialog box launcher in the lower-right corner of either Paragraph group,

FIGURE 9.2

The Paragraph dialog box contains controls for most of Word's direct paragraph-formatting attributes.

Adding indentation

Indentation refers to adding extra space between one or more lines of a paragraph and the left and/or right margins.

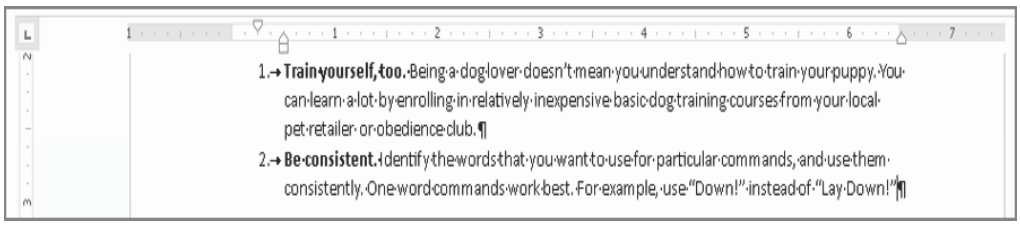

Indenting with the Ruler

The horizontal Ruler provides a mouse-based way to create indents and is especially easy for creating first line and hanging indents.

1. To display the ruler if needed, click the **View** tab and click **Ruler** in the Show group.
2. Select the paragraphs to indent.
3. Drag the indent symbols on the ruler as needed to apply the desired indentation.

FIGURE 9.3

Use the mouse to drag indentation controls on the ruler provides.

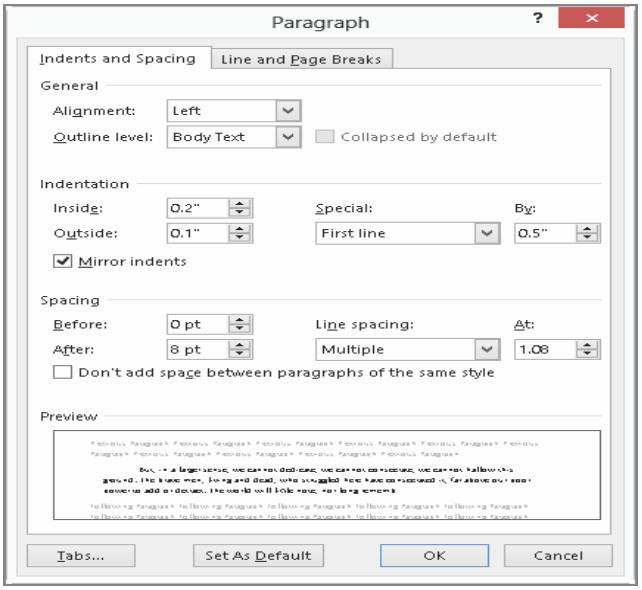

Custom and mirror indents

Many users still prefer to set indents in the Indentation section of the Indents and Spacing tab of the Paragraph dialog box, shown in Figure 9.4

For example, clicking the up and down arrow buttons for Left or Right increments those settings by .1 inch.

FIGURE 9.4

Use the Paragraph dialog box to enter precise indent settings or add mirror indents.

Changing text alignment

Horizontal alignment determines how any given paragraph is oriented between the left and right margins.

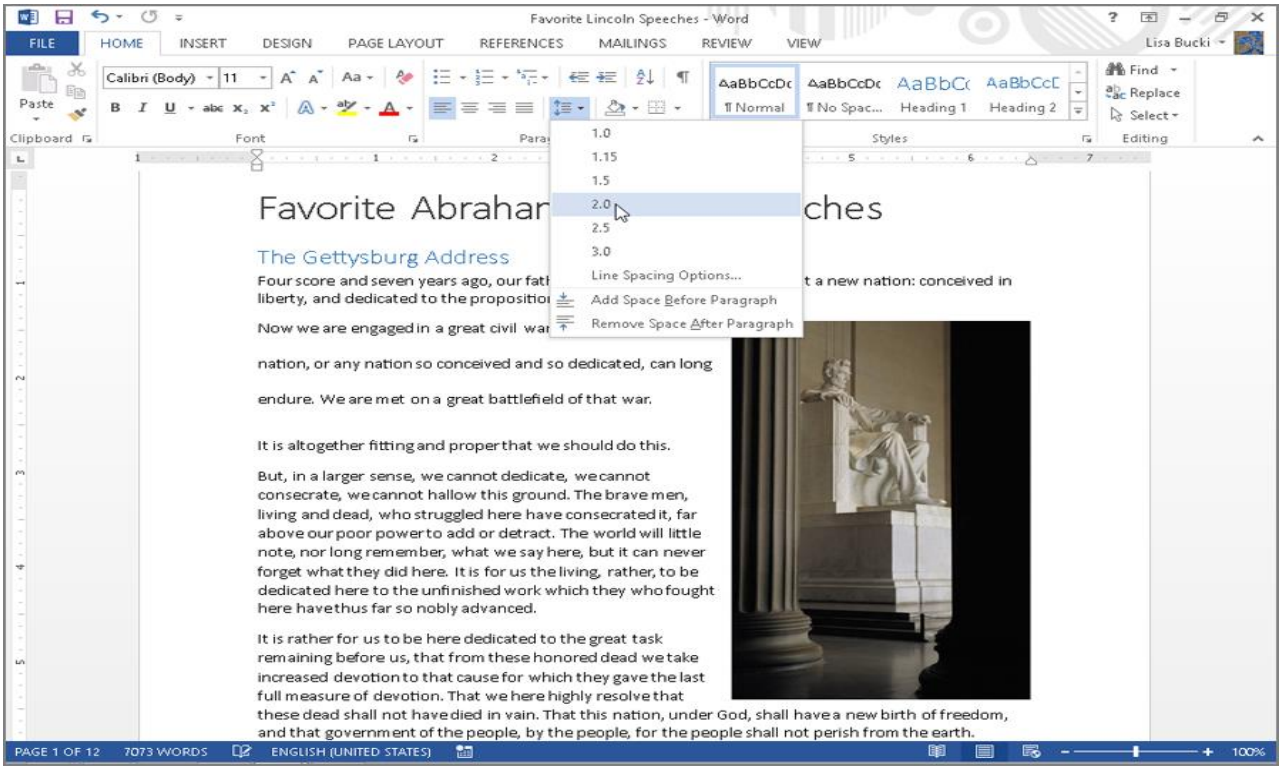

- **Align Left (Ctrl+L):** Starts the left side of each line of text at the left margin, leaving a ragged right paragraph edge.
- **Center (Ctrl+E):** Centers each line in a paragraph between the left and right margins, giving both sides of the paragraph a ragged appearance.
- **Align Right (Ctrl+R):** Moves each line of the paragraph over to the right, so the right side aligns at the right margin, leaving a ragged left edge.
- **Justified (Ctrl+J):** Adds additional spacing between letters to align the left and right side of each line of text to its respective margin, giving straight left and right paragraph edges.

Changing spacing

Use the Line and Paragraph Spacing drop-down list in the Paragraph group of the Home tab to change paragraph spacing Between lines

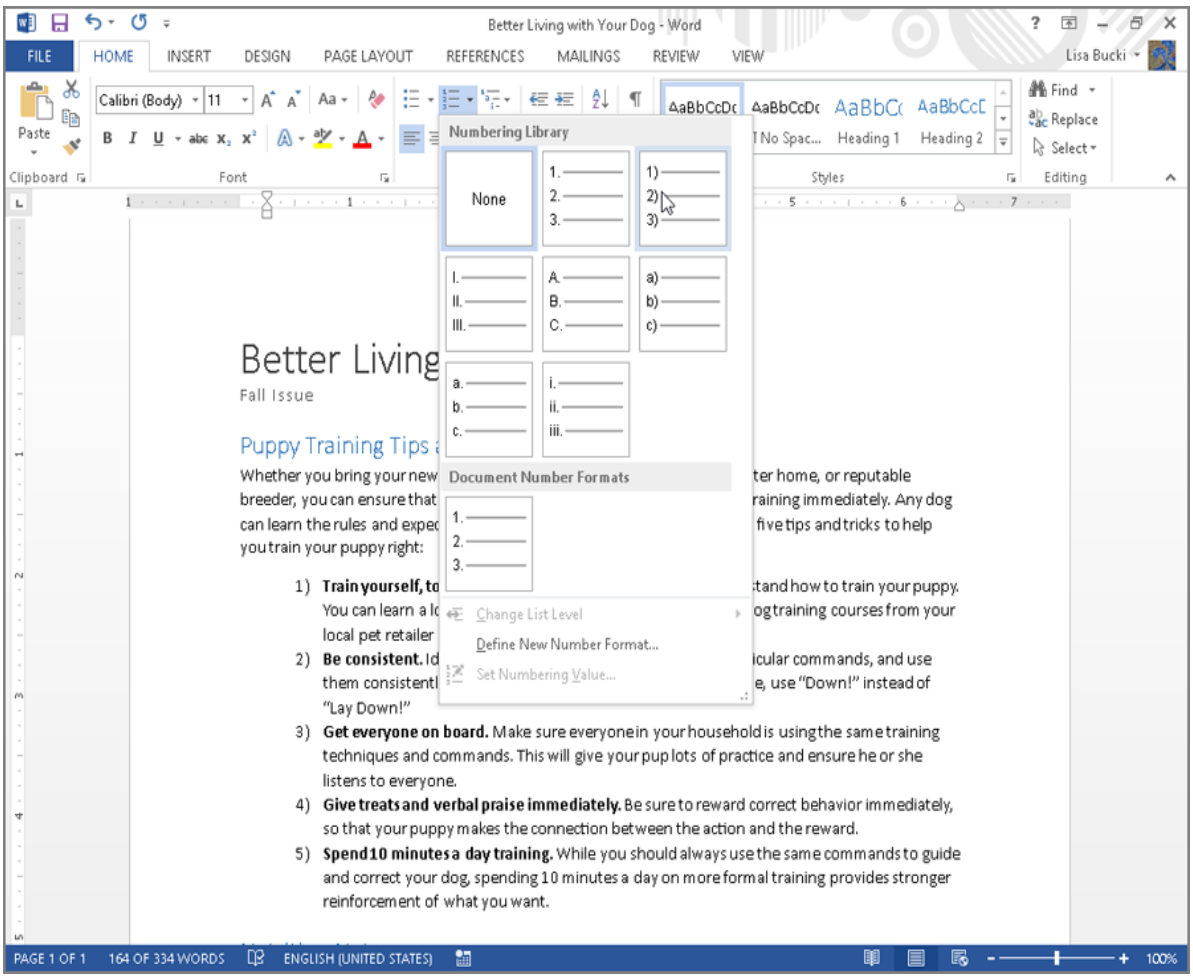

By default, the Normal paragraph style is set to 1.15 line spacing. To change to another line spacing setting:

1. **Select the paragraphs to change.**
2. **Click the Paragraph and Line Spacing button in the Paragraph group of the Home tab.** A menu with preset spacing settings and other commands appears.
3. **Click the spacing to apply.**

Numbering or bulleting lists of text

You can apply numbering or bullets to selected paragraphs by clicking the Numbering or Bullets button in the Paragraph group of the Home tab. Each paragraph in the list becomes a separate numbered or bulleted item.

Text Formatting

Copying formatting

If you prefer to use keyboard shortcuts for your formatting work where possible, use this method to copy and paste formatting:

1. **Select the text with the formatting to copy.**
2. **Press Ctrl+Shift+C.** This keyboard shortcut copies the formatting of the selected text.
3. **Select the text on which you want to paste the copied formatting.**
4. **Press Ctrl+Shift+V.** Word pastes the formatting on the selected text.

Using the Font group on the Home tab

Figure 11.1 shows you the Font group of the Home tab. It includes more than a dozen direct formatting tools on two rows.

FIGURE 11.1

The Font group puts character formatting choices a mouse click away.

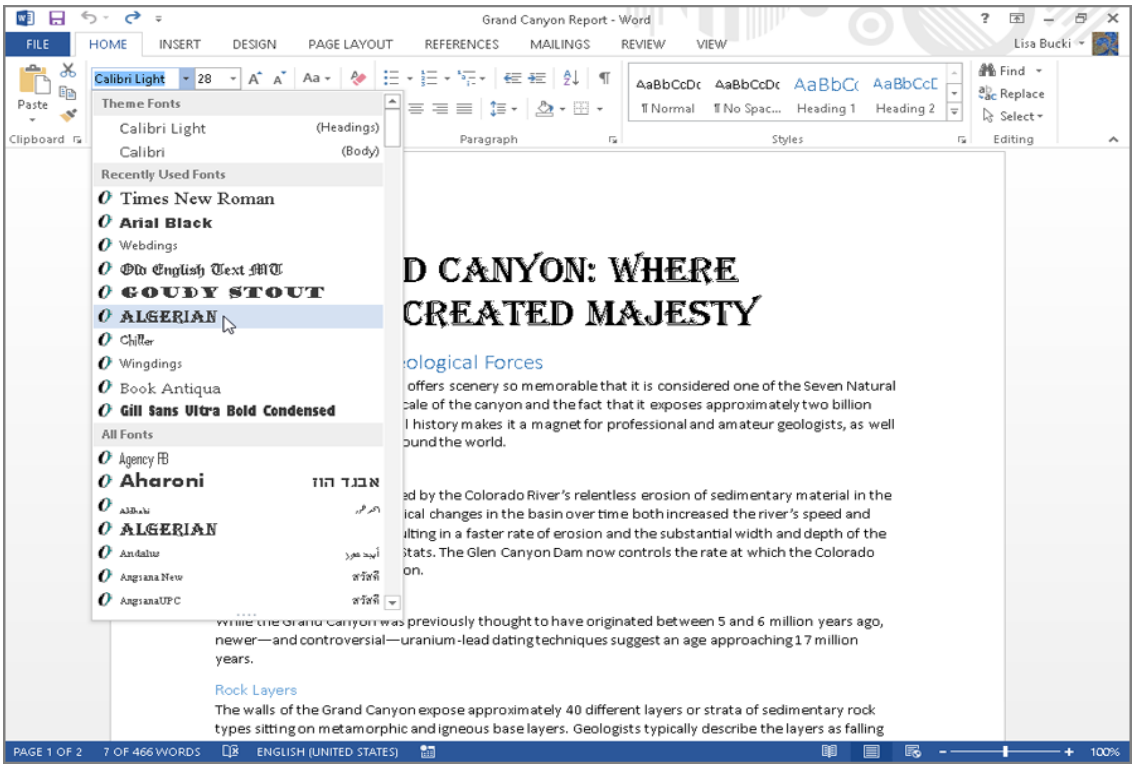

A number of the Font tools offer a Live Preview to help you make the best formatting selection:

- Font (the overall type design, such as Calibri)
- Font Size
- Text Highlight Color
- Font color
- Text Effects and Typography (which you'll see later in the chapter)

As shown in Figure 11.2 Live Preview shows you the results of the selected (but not yet applied) formatting..

FIGURE 11.2

Live Preview shows how the selected font would look when applied.

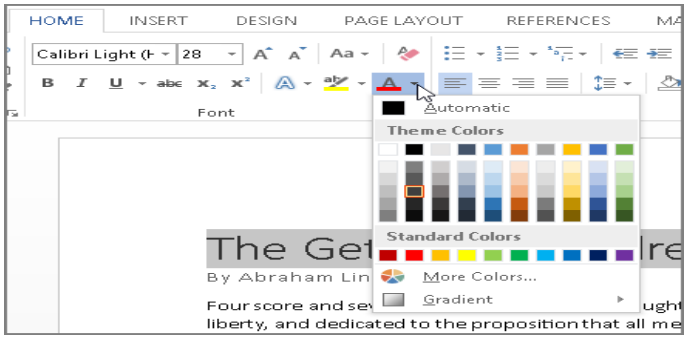

Increase Font Size and Decrease Font Size

You also can change text size with the Increase Font Size and Decrease Font Size tools (which are the two A buttons immediately to the right of the Font and Font Size tools in Figure 11.1). If you hover the mouse pointer over these you'll also learn that they both have shortcuts, Ctrl+Shift+. (the period character) and Ctrl+Shift+, (the comma character), respectively.

Font Color

The Font Color setting determines the colors of the lettering for the selected text. Click the Text Color drop-down arrow in the Font group of the Home tab to open a palette or gallery of colors, as shown in Figure 11.3

FIGURE 11.3

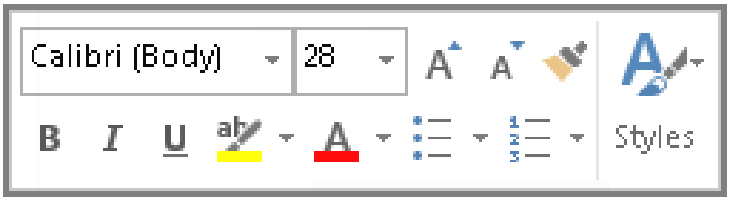

The Mini Toolbar

Yet another tool for applying formatting is the Mini Toolbar Shown in Figure 11.4, the Mini Toolbar has a sampling of character-formatting tools from the Font group of the Home tab.

FIGURE 5.16

The Mini Toolbar has a sampling of character-formatting tools from the Font group of the Home tab.

4- Text Objects

Pictures

Adding the picture

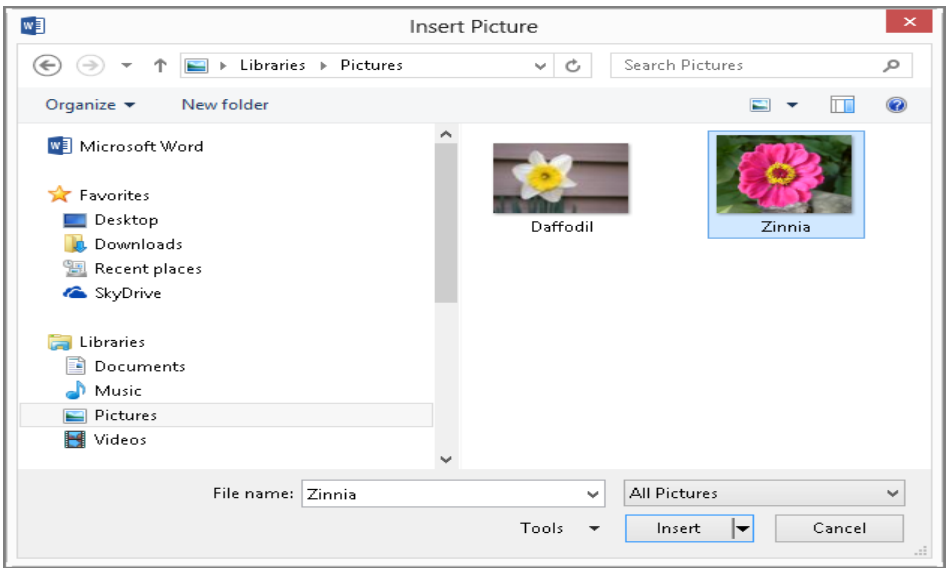

To insert a picture at the current insertion location in a document:

1. Click Pictures in the Illustrations group of the Insert tab. The Insert Picture dialog box appears as shown in Figure 7.1, by default showing the contents of your Pictures Library.

2. If the picture is in an alternate location, navigate to it.

FIGURE 7.1

When you insert a picture, the Pictures Library contents appear first.

3. Once you've found the picture to insert, you can either double-click it to insert it immediately or click it once and choose an insert method from the Insert button drop-down list.

Controlling picture positioning

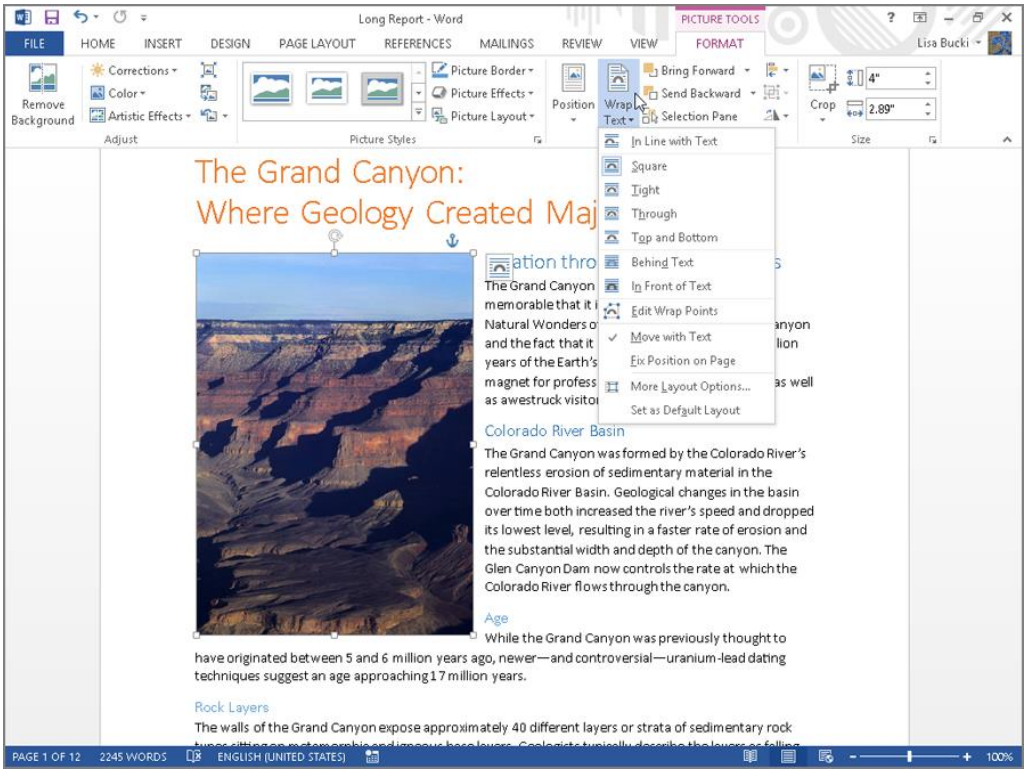

Wrapping is the term used to classify the various ways in which pictures appear relative to the text in a Word document, The Wrap Text setting determines how graphics interact with each other and with text.

In Front of Text : The graphic can be dragged anywhere in the document

To set the wrapping behavior of a graphic, click it and then click the Wrap Text button in the Arrange group of the Picture Tools > Format tab. Choose **In Front of Text**, as shown in Figure 7.2

FIGURE 7.2

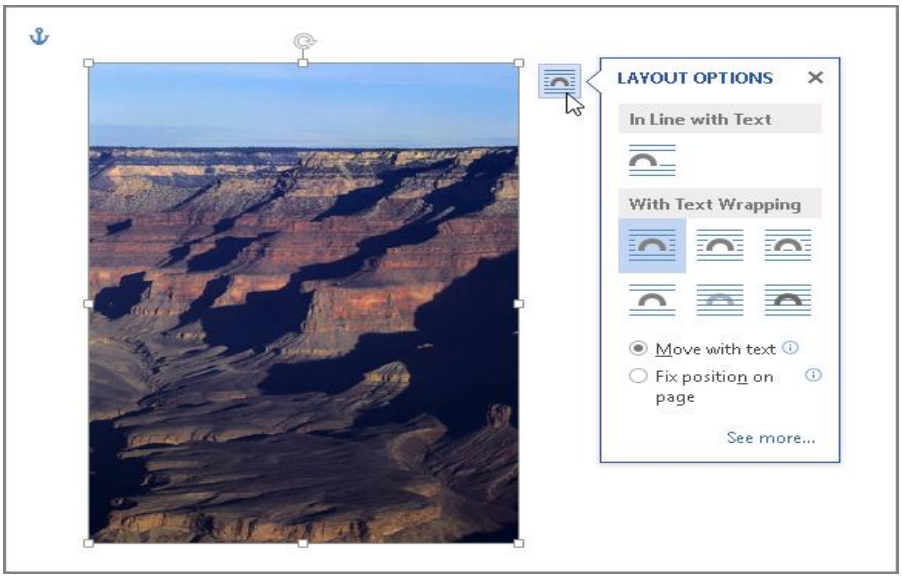

Wrapping behavior determines where you can position a picture or graphic in Word.

you also can click the Layout Options button that appears to the right of a selected picture or graphic to access Text Wrapping settings in a flyout, as shown in Figure 7.3

FIGURE 7.3

The Layout Options button also enables you to work with text wrapping.

Resizing, rotating, and cropping a picture

Resizing changes the physical dimensions of the picture or other graphic as it is displayed in your document.

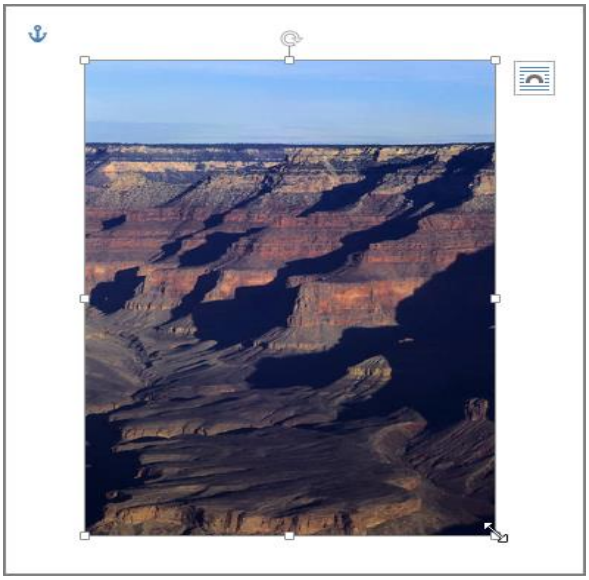

Cropping refers to blocking out certain portions of a picture by changing its exterior borders. You can crop out distracting or unnecessary details.

Resizing and rotating

You can resize a picture by dragging. To resize by dragging, click on the picture and then move the mouse pointer so that it's over one of the eight sizing handles. The mouse pointer changes into a double arrow, as shown in Figure 7.4 Drag until the picture is the desired size and then release the mouse button.

FIGURE 7.4

Resize a picture or other graphic by dragging any of the eight sizing handles.

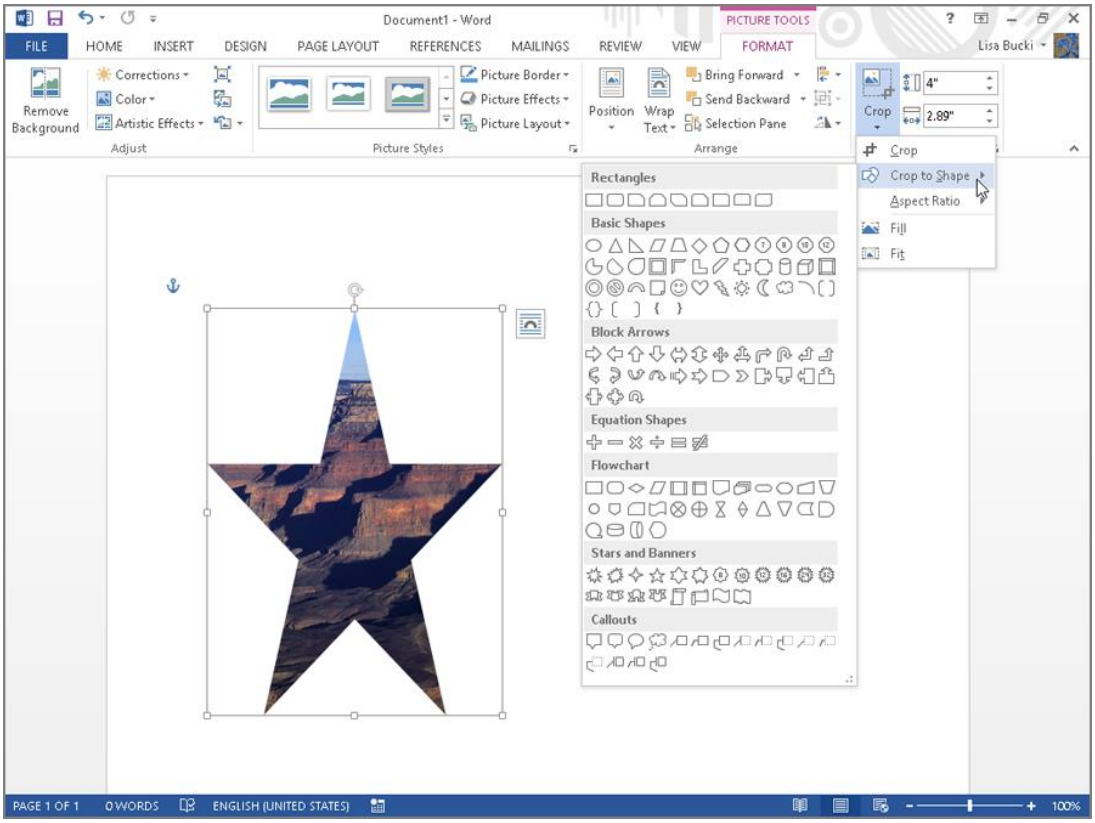

Use the rotate handle with the circular arrow icon above the top center resizing handle to rotate a picture. Select the picture and drag the handle in the direction in which you want to rotate the picture.

Cropping

To crop a picture, click the Crop button in the Size group in the Picture Tools > **Format** tab. Cropping handles appear on the selected picture. Move the pointer over any of the eight crop- ping handles, and when it changes shape to match the handle, drag to remove the part of the picture you want to hide. Click outside the picture to finish applying the crop.

FIGURE 7.4

Crop to hide part of a picture or to change its overall shape.

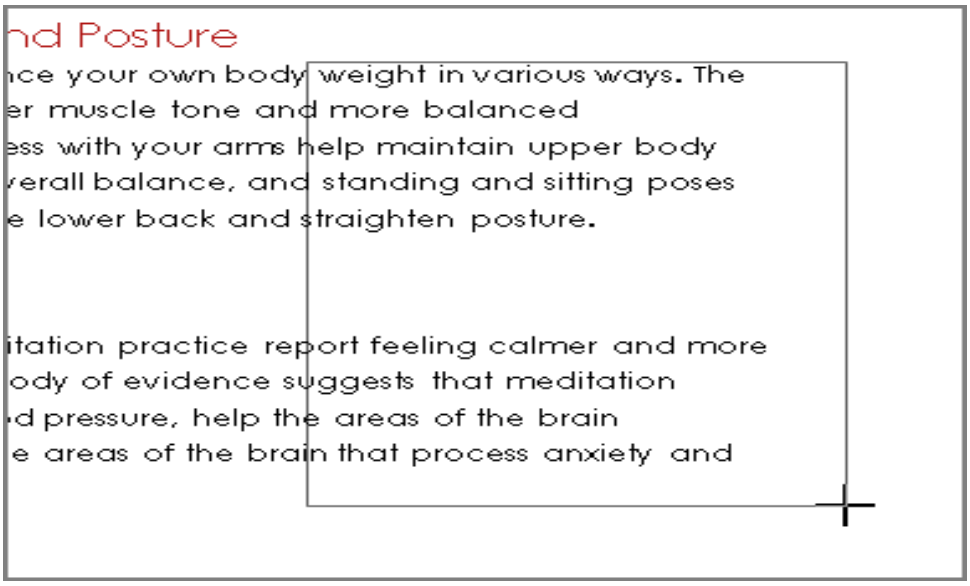

Text Box

Designing your own text box

You can also insert your own text boxes from scratch. Click Text Box in the text group of the Insert tab on the Ribbon and click Draw Textbox. The mouse pointer turns into a large plus sign. Drag on the document until the text box reaches the size you want, as shown in Figure 8.1. Release the mouse button and you now have your text box

FIGURE 8.1

Drag to create the text box size you want.

After drawing the new text box, type or paste your text into it. From there, you can format it as needed.

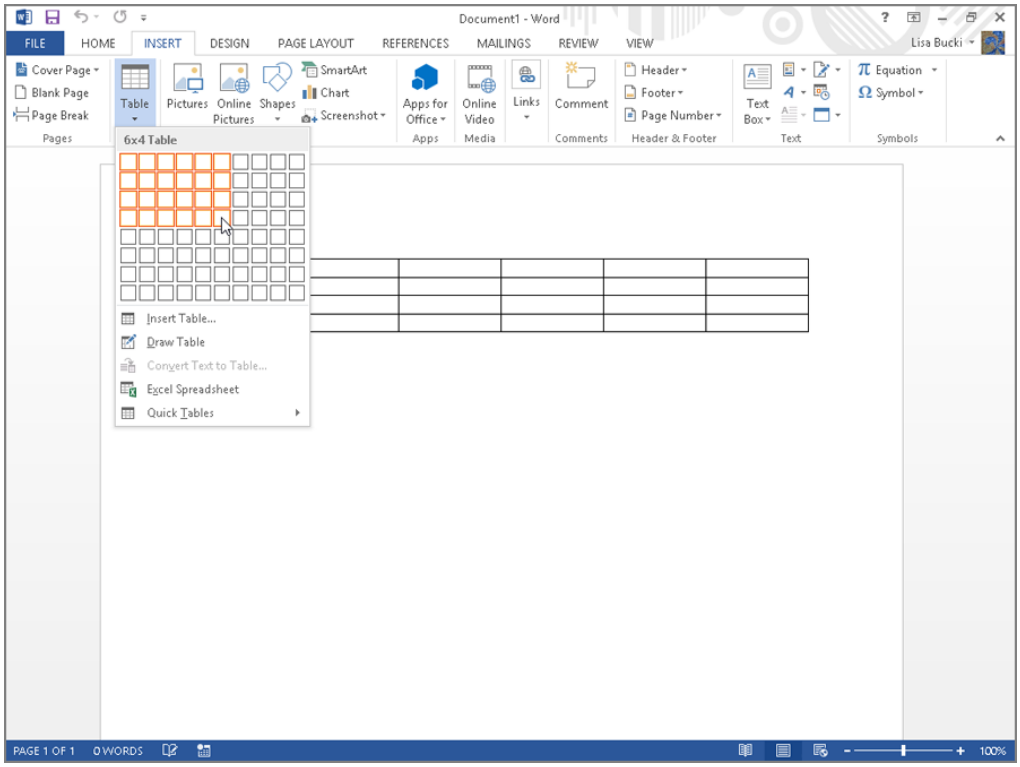

Tables

Inserting a table from scratch

There are three basic methods for creating a table from scratch. One is to use the Table tool to select the numbers of rows and columns you want. On the Insert tab, click Table in the Tables group. Drag the mouse pointer down through the Insert Table grid. As you move the mouse, the selected table dimensions change, and Word shows a Live Preview in the document window, as shown in Figure 13.1. Click the mouse when the table has the number of rows and columns you want.

FIGURE 13.1

When a 6 x 4 table is selected in the Insert Table grid, a 6 x 4 Live Preview appears in the document window.

Modifying table layout

Deleting table, row, column, and cell contents

Sometimes you need to trim your tables by deleting rows or columns. Sometimes you have to delete the entire table, which is one of Word's less intuitive processes. If you select a table and press the Delete key, the data inside the table is deleted, but the table rows and columns remain. The same thing sometimes happens when you try to delete a cell, a row, or a column.

Deleting a table

to delete an entire table Select the table using the method of your choice, and then press Backspace.

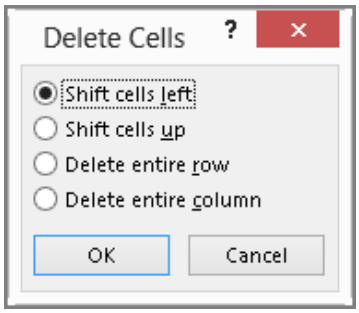

Deleting rows, columns, and cells

To delete the current row or column Select the row(s), column(s), or cell(s) and press Backspace,

When deleting cells, Word needs a little more information. The Delete Cells dialog box shown in Figure 13.2 prompts you to specify how to shift remaining cells, or whether you in fact really mean to delete the row or column. Make your selection and click OK.

FIGURE 13.2

Word prompts to find out how to handle the rest of the column or row when you delete a single cell.

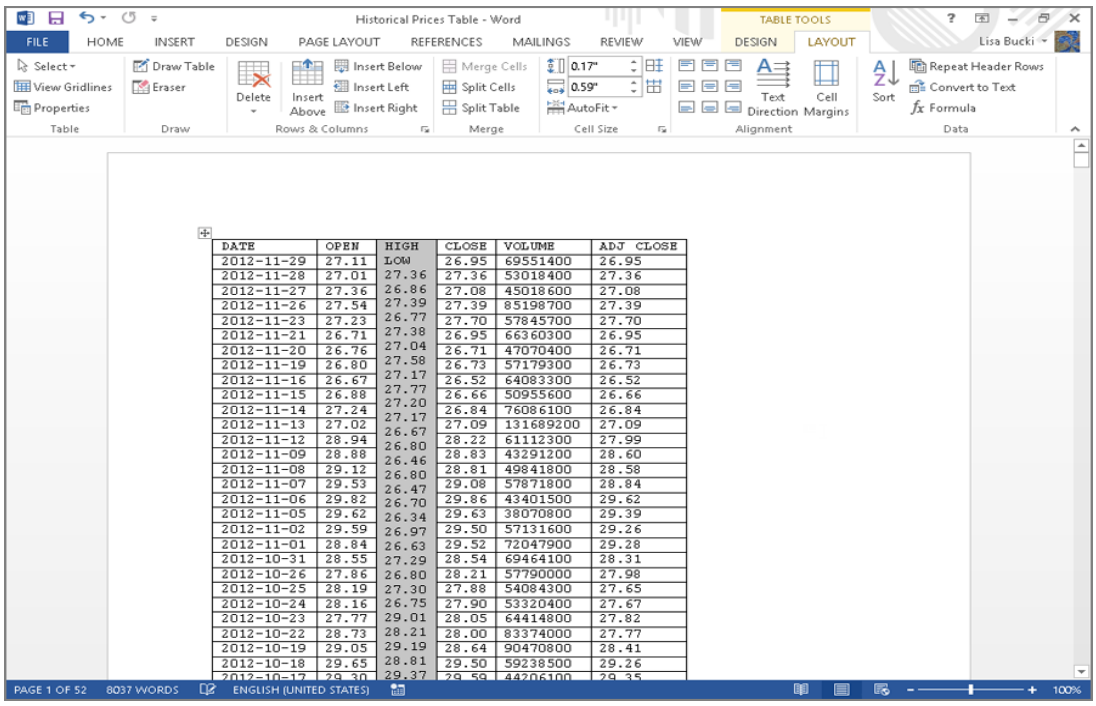

Inserting rows

To add a new row to the end of an existing table, place the insertion point at the end of the entry in the bottom-right cell and press the Tab key

Merging table cells

Sometimes you need to merge columns, rows, or cells Merging cells is easy. Select the cells you want to merge and click Merge Cells in the Merge group of the Layout tab (refer to Figure 13.3.

FIGURE 13.3

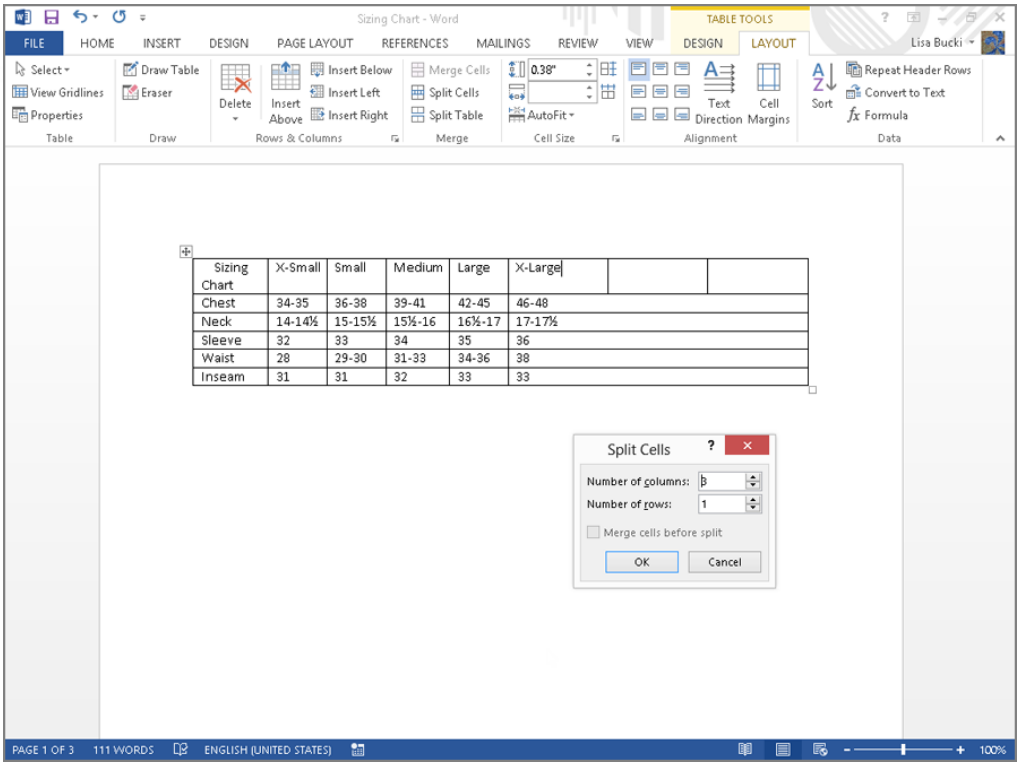

Splitting cells, rows, and columns

To perform a split, select the cell(s) to split, click Split cells in the Merge group of the Layout tab, make Number of columns and Number of rows entries as needed in the Split Cells dialog box, and click OK.

FIGURE 13.4

When you split cells, specify how many rows and columns you want to create.

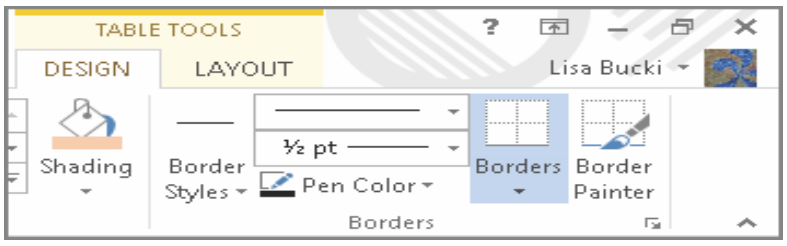

Borders

Border lines separate a table into cells, rows, and columns Any of the border tools can be used to control borders in tables.

FIGURE 13.5

Use the Borders Styles tool and its friends to make ad hoc changes to table borders.

1. Select the cells, rows, or columns to which you want to apply borders.
2. In the Borders group of the Design contextual tab, choose the settings you want.
3. Click the Borders button down arrow, and then click to specify where you'd like to apply the borders. Click Outside Borders to put borders all around the selection, for example.

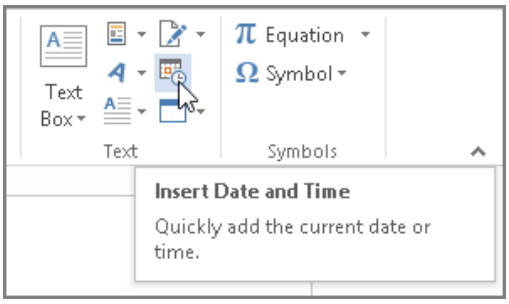

4. Click No Border in the Borders tool menu to remove existing borders from the table selection

Insert Date & Time

in the Insert tab's Text group, click the Insert Date and Time field button, as shown in Figure 14.1.

FIGURE 14.1

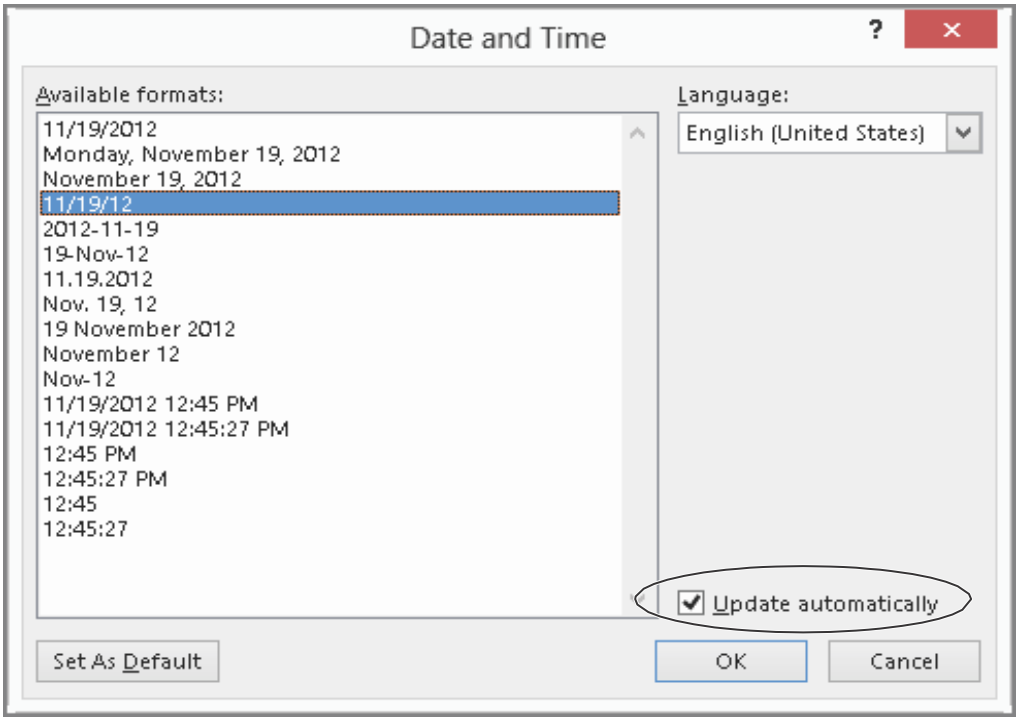

Some features such as Insert Date and Time.

In response, the Date and Time dialog box springs to life. If you choose a format and click OK, you'll get just the date and/or time in the format selected,

FIGURE 14.2

Update automatically instructs Word to insert a Date field code instead of just the date and time.

Footnote

Inserting a footnote

To insert a footnote, put the insertion point immediately after the character where you want the footnote reference mark to appear and click Insert Footnote in the Footnote group of the References tab on the Ribbon.

Type the footnote, including any desired formatting and punctuation. Then click back in the text to continue typing.

FIGURE 15.1

In Print Layout view, footnotes are composed in the footnote area at the bottom of the page.

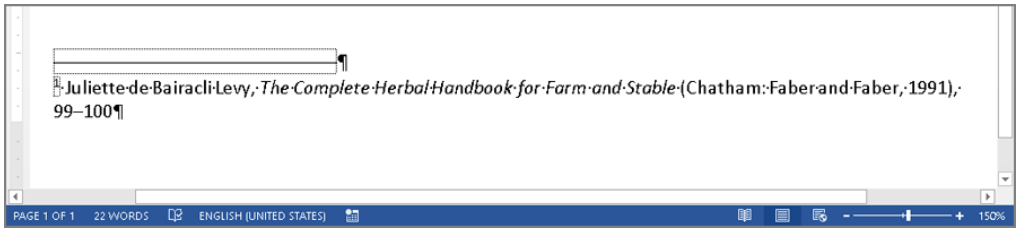

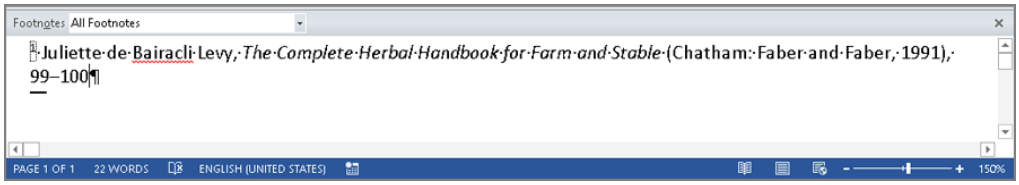

FIGURE 15.2

In Draft view, footnotes are composed in the Footnotes pane.

Right-to-Left footnotes Separator

If you are using right-to-left language and want to make the footnote separator also right to left like the footnote.

1. You can edit footnote separators in **Draft** view.
2. First, go to the **VIEW** tab and from **Views** Box Choose **Draft**.
3. Go to the **References** tab and click on **Show Notes**.
4. In the new window that appears below, open the drop-down menu labeled Footnotes and choose **Footnote Separator**.
5. Now you can highlight the separator in the textbox below and align it to the right just like normal text. Right CTRL + SHIFT.
6. Now go back to the Print Layout view and you should see the changes

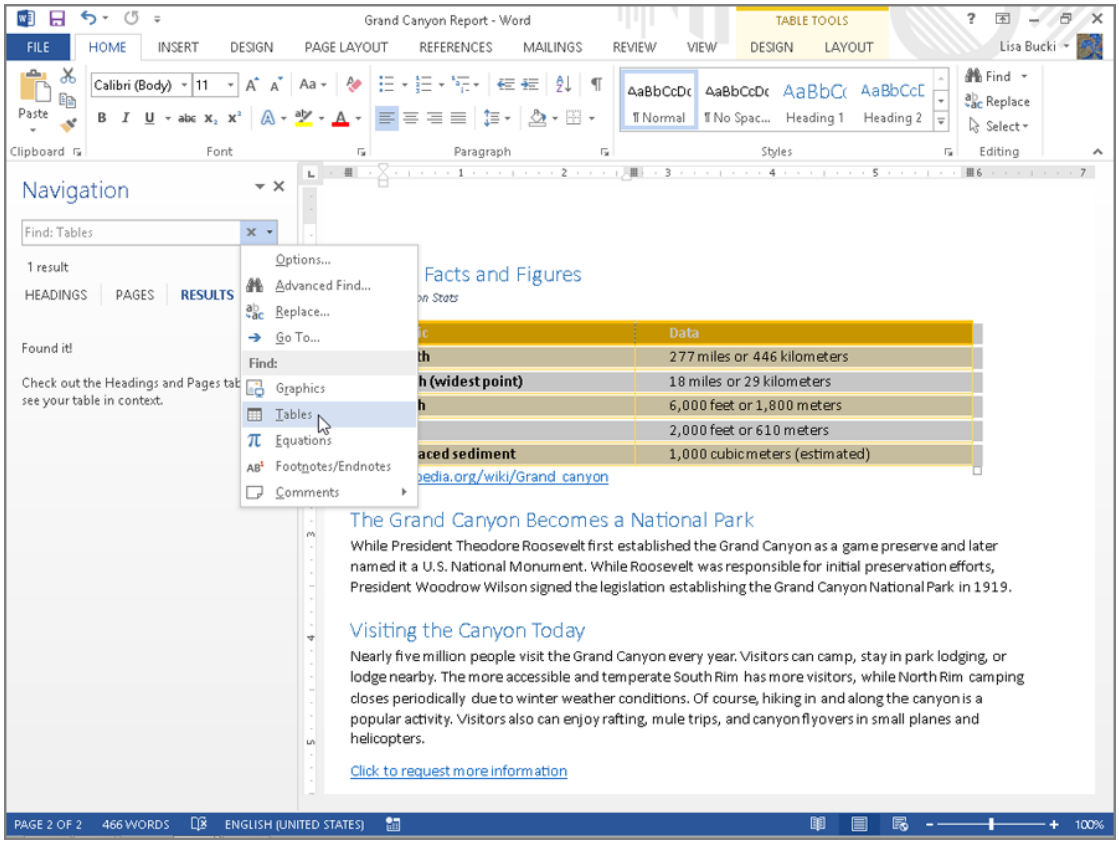

Find & Replace & Go To

Searching for selected text

press Ctrl+F or open the Find and Replace dialog box.

FIGURE 16.1

Use the Search for more things button to find non-text objects.

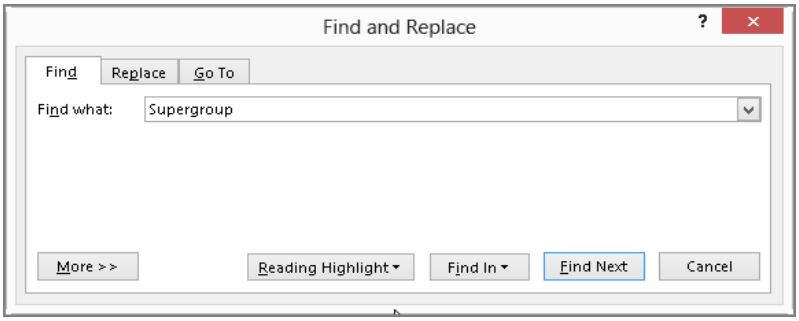

Starting an Advanced Find from the Ribbon

If you're a longtime Word user and want to stick with the Find and Replace dialog box, you can.

FIGURE 16.2

You can still search using the Find dialog box.

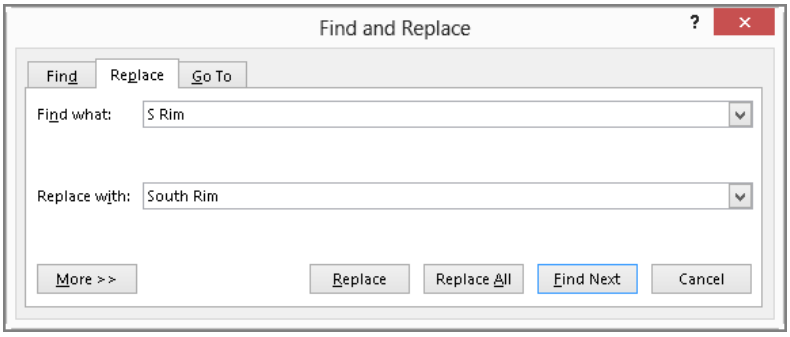

Replacing Text via the Ribbon

1. Press **Ctrl+Home** to move the insertion point to the top of the document. This step isn't essential, but it ensures you will search your entire document when needed.
2. Press **Ctrl+H** or click Replace in the Editing Group of the Home tab. The Find and Replace dialog box opens with the Replace tab selected.
3. Type the search text in the Find what text box.
4. Type the replacement text in the Replace with text box. Figure 16.3 shows an example of search and replacement text entered.

FIGURE 16.3

Specify both find and replace terms to make selected or global updates.

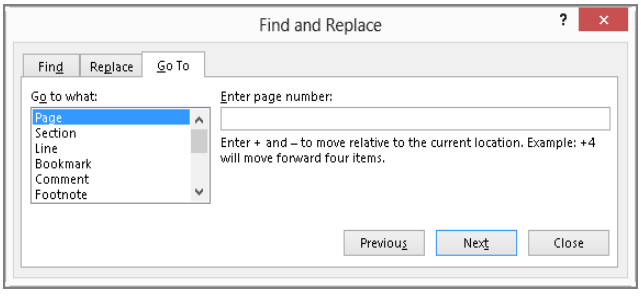

5. Click Find Next to find the first matching instance of the search text. Word scrolls the document and highlights the match in gray.
6. Choose how to handle the found match:
   - Click Replace to replace the first found instance and find the next.
   - Click Replace All to replace all matching instances.
   - Click Find Next to skip the match and find the next match.
7. In the message box that tells you the search is complete, click ok.

Jumping to a Document Location with Go To (Ctrl+G)

The third tab in the Find and Replace dialog box houses the Go To functions. Go To enables you to easily find locations or objects in the document that you can't find with the Navigation pane or Find and Replace. The shortcut key for Go To is Ctrl+G.

FIGURE 16.4

The Go to what list can be set to any of several possible items.

Page

Go To Page lets you jump to any page in the current document. As with many of the Go To items, you can specify page numbers absolutely or relatively. For example 25 would cause you to jump to page 25.

Bookmark

If you select Bookmark from the Go to what list of the Go To tab of the Find and Replace dialog box, you can select a bookmark from the Enter bookmark name list, and then click Go To to jump to it

5- References

Working with Bookmarks

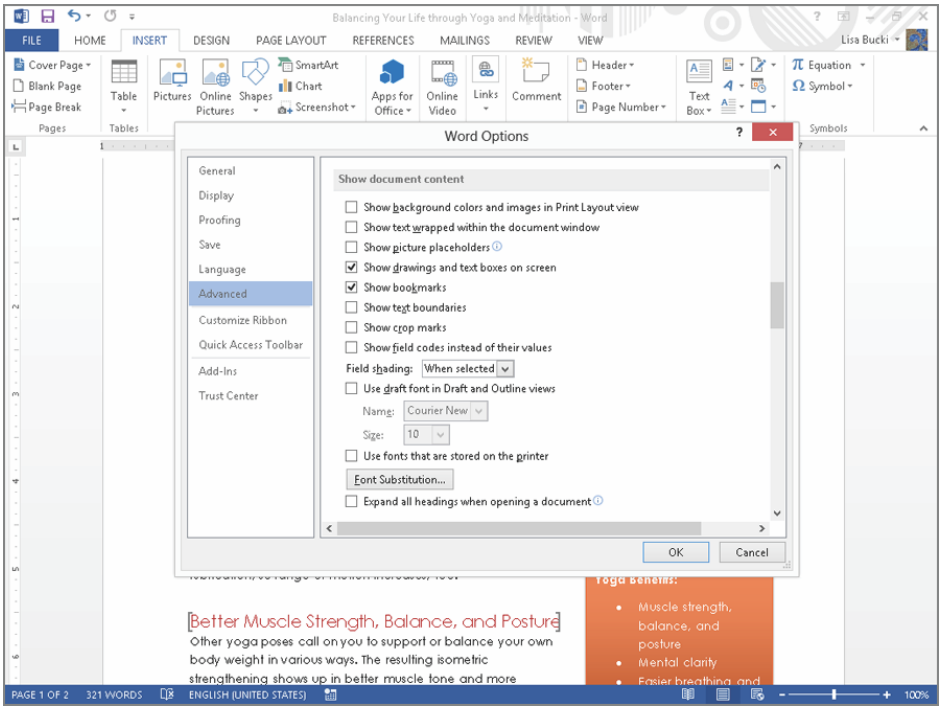

A ***bookmark*** is a way of naming a point or a selection in a Word document so that it you can easily locate it or refer to in some way.

Displaying bookmarks

By default, Word does not display any indication of bookmarks. To display bookmarks, choose File > Options > Advanced, and in the Show document content section, click to place a check next to **Show bookmarks**, as shown in Figure 17.1.

FIGURE 17.1

Check next to Show bookmarks to display bookmarks in your document.

Marking bookmarks

You can bookmark a point, selected text, or a selected object such as a picture. Use these steps to add bookmarks where needed in your document:

1. Select the text or object, or to bookmark a point, click to position the insertion point in the desired location.
2. Click the Insert tab on the Ribbon, and in the Links group, click Bookmark.

FIGURE 17.2

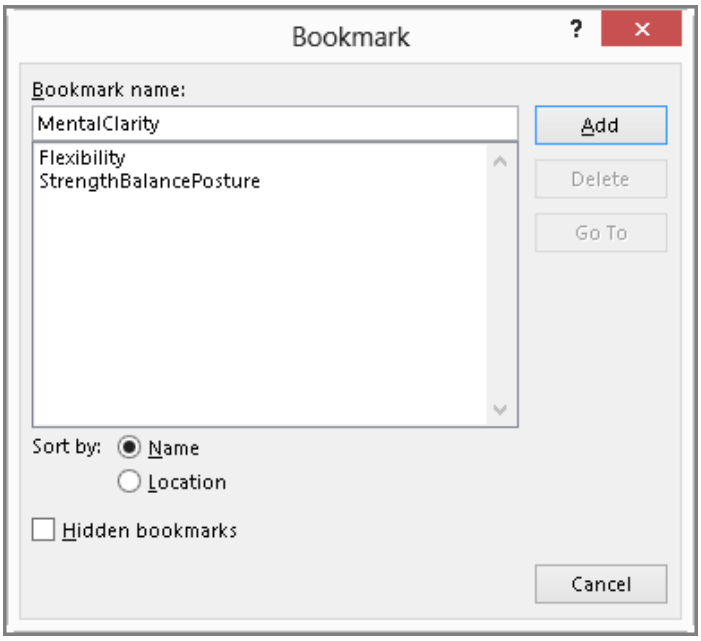

Choose Bookmark to insert a bookmark.

3. Type a name for the new bookmark in the Bookmark name text box as shown in Figure 17.3, and click Add or press Enter.

FIGURE 17.3

Use the Bookmark dialog box to Add, Delete, and Go To bookmarks.

What's in a name?

Word also has rules for naming bookmarks. Bookmark names:

- Cannot include spaces.
- Can include any combination of letters (including accented letters), numbers, and the underscore (_) character.

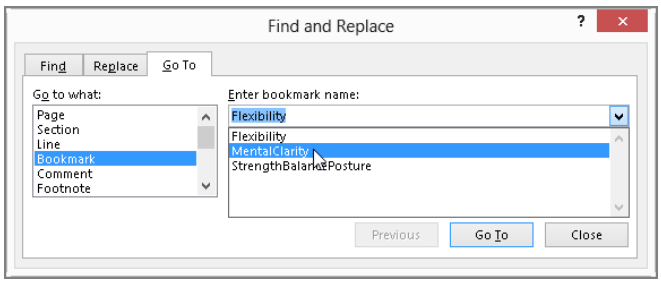

Navigating bookmarks

There are two main ways to navigate to a bookmark:

- You've already seen that the Bookmark dialog box has its own Go To button. Select a bookmark in the Bookmark name list, click Go To to select the contents of that bookmark in the document, and then click Close.
- Another vehicle is the Go To tab in the Find and Replace dialog box. Press Ctrl+G to open the Find and Replace dialog with the Go To tab selected. Click Bookmark in the Go to what list at the left. Open the Enter bookmark name drop-down list, click a bookmark name (Figure 17.4), and then click Go To. Click Close to close the dialog box.

FIGURE 17.4

The Go To tab in the Find and Replace dialog box also enables you to go to a bookmark.

Hyperlinks

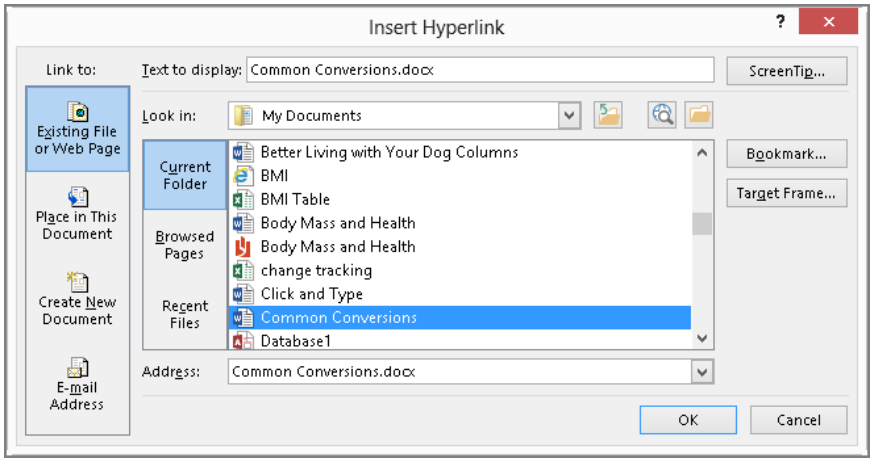

Hyperlinks often appear as underlined text that is a different color from the surrounding text, If you click a link, your computer attempts to display the information contained at the indicated address using the program that's associated with it.

Inserting hyperlinks

Click Insert, click Links in the Links group if needed, and then click Hyperlink. The Insert Hyperlink dialog box shown in Figure 18.1 appears. and then click OK to insert the hyperlink.

FIGURE 18.1

Use Insert Hyperlink to create a variety of hyperlinks.

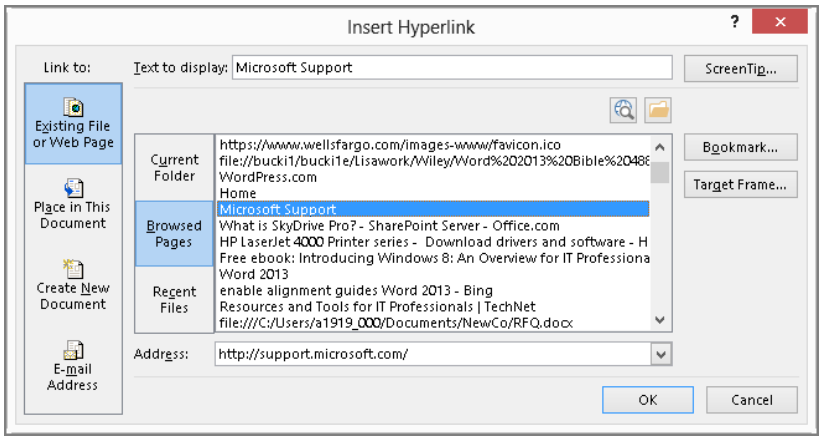

Linking to a web page

To link to a web page click the Browse the Web button. Use your browser to navigate to the page you want to link. When you return to the Insert Hyperlink dialog box, the URL from your browser is automatically copied into the Address field and then click OK to insert the link.

FIGURE 18.2

Click Browsed Pages and use the list to select a recently visited website to link to.

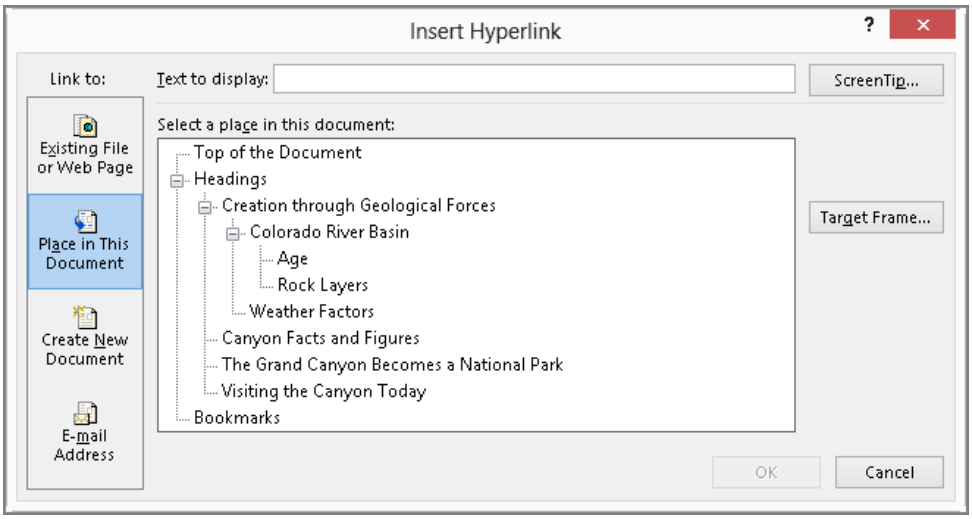

Link to Place in This Document

When using a hyperlink to another place in the same document, In the Link to section of the Insert Hyperlink dialog box, click Place in This Document. As suggested by Figure 18.3, you can link to any bookmark in the document.

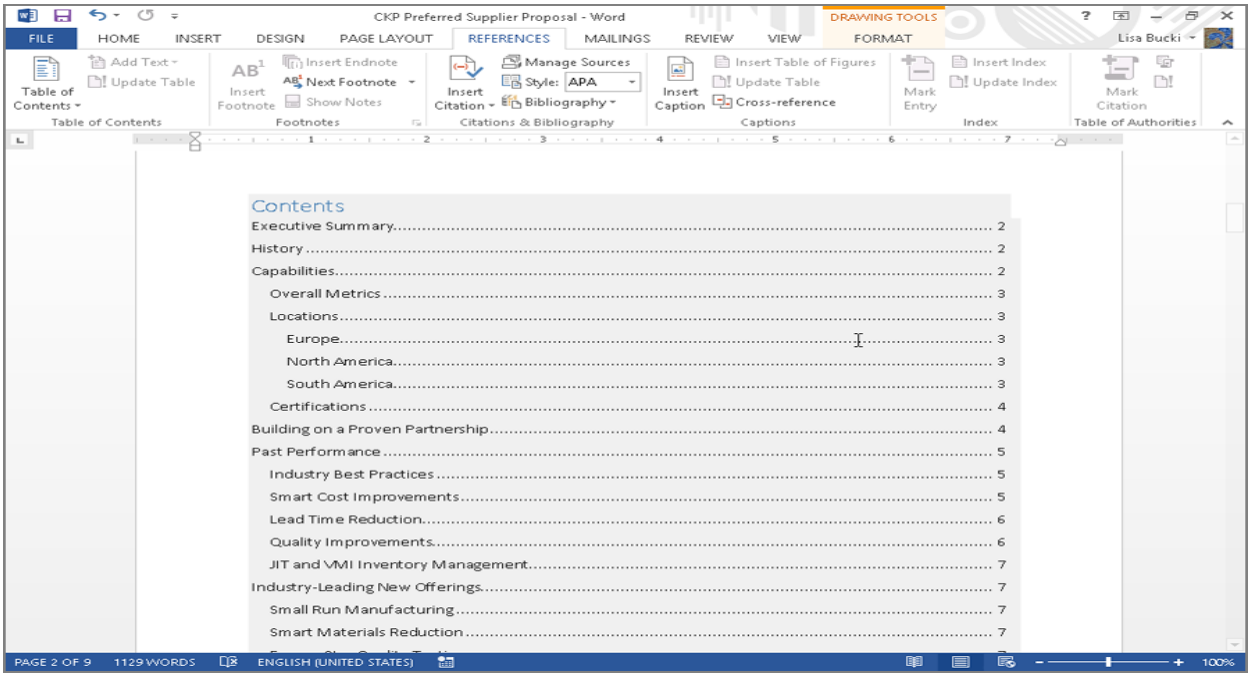

FIGURE 18.3

You can hyperlink to a heading or bookmark in the current document.

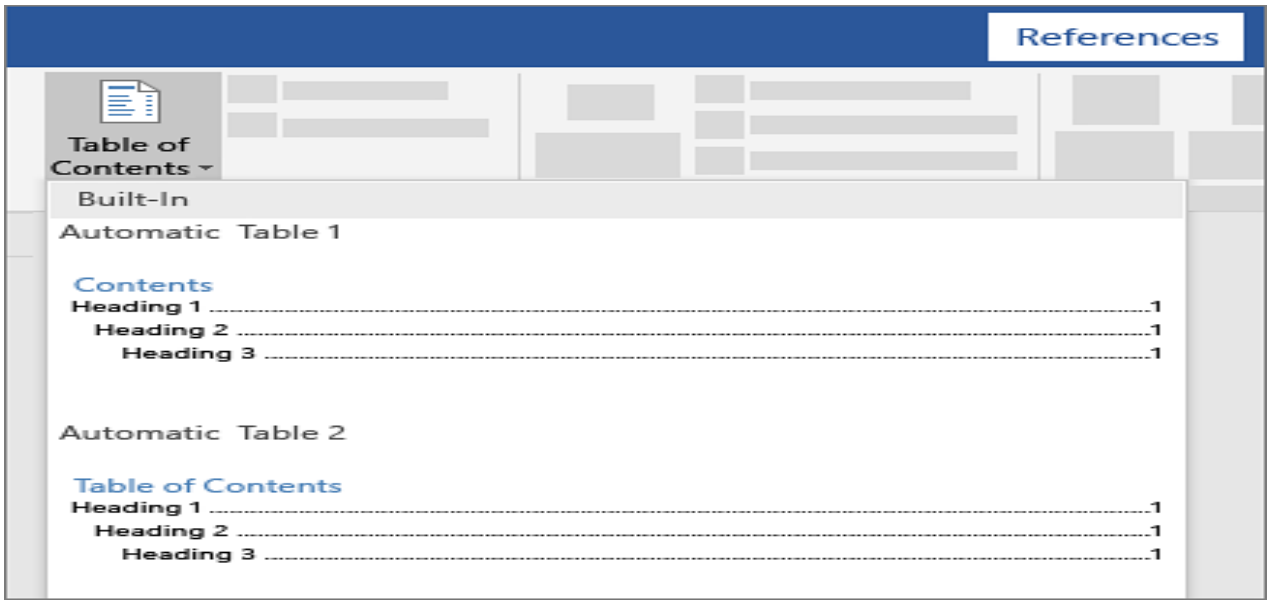

Insert a table of contents

A table of contents in Word is based on the headings in your document.

Create the table of contents

1. Put your cursor where you want to add the table of contents.
2. Go to **References** > **Table of Contents**. and choose an automatic style.

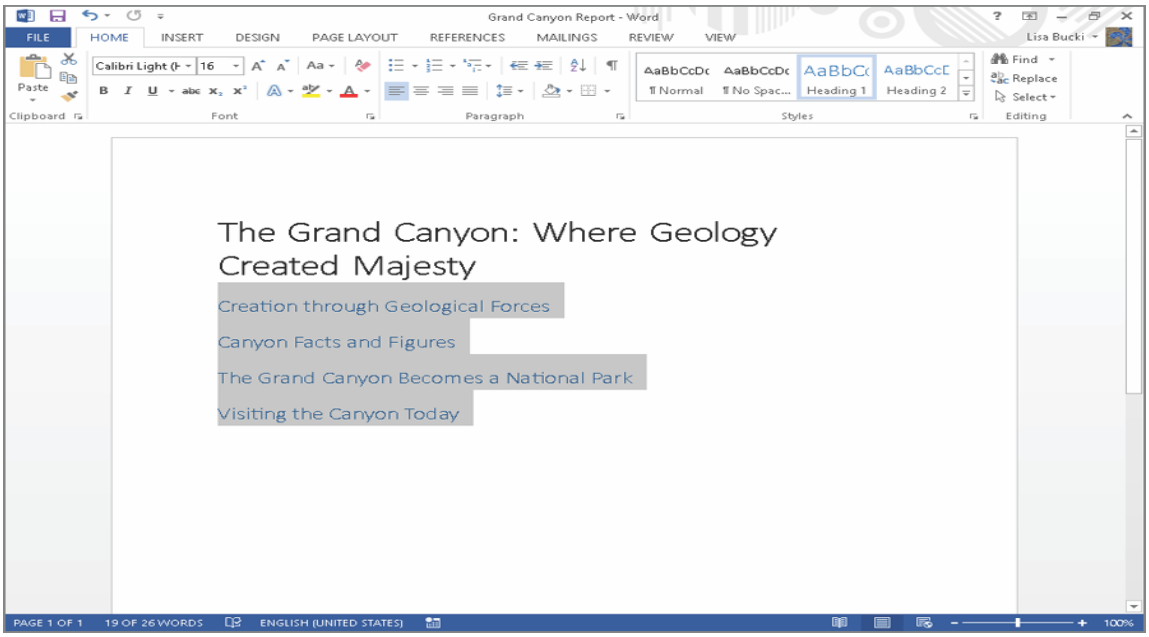

3. If you make changes to your document that affect the table of contents, update the table of contents by right-clicking the table of contents and choosing **Update Field**.

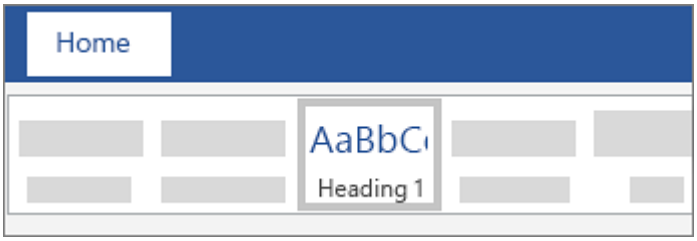

If you have missing entries

Missing entries often happen because headings aren't formatted as headings.

1. For each heading that you want in the table of contents, select the heading text.

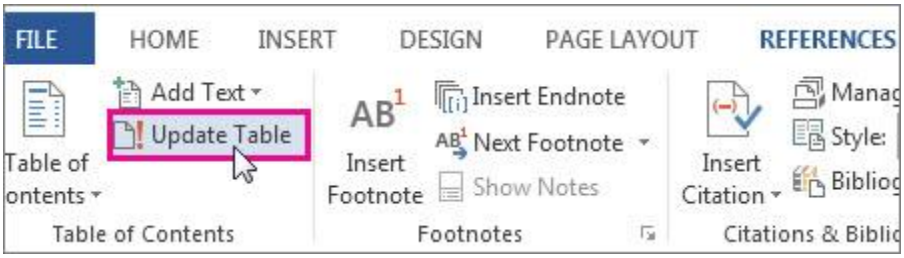

2. Go to **Home** > **Styles**, and then choose **Heading 1**.

3. Update your table of contents.

Update a table of contents

1. Go to **References** > **Update Table**.

- Select **Update entire table** This will reflect any updates to the heading text, as well as any page changes.

2. Select **OK**.

Comments and Tracked Changes

Comments and tracked changes are two ways Word provides for reviewing others' Word documents. Comments themselves are easy to explain: they are notes, questions, suggestions, and other details that a reader offers to the author of the Word document.

Tracked changes, however, are part of the flow. Tracked changes are insertions and deletions made to a Word document. You can see what was inserted or deleted, by whom, and when. That way, if you have multiple reviewers making changes in a document, you can see who made which changes, which helps in deciding how to integrate inconsistent edits.

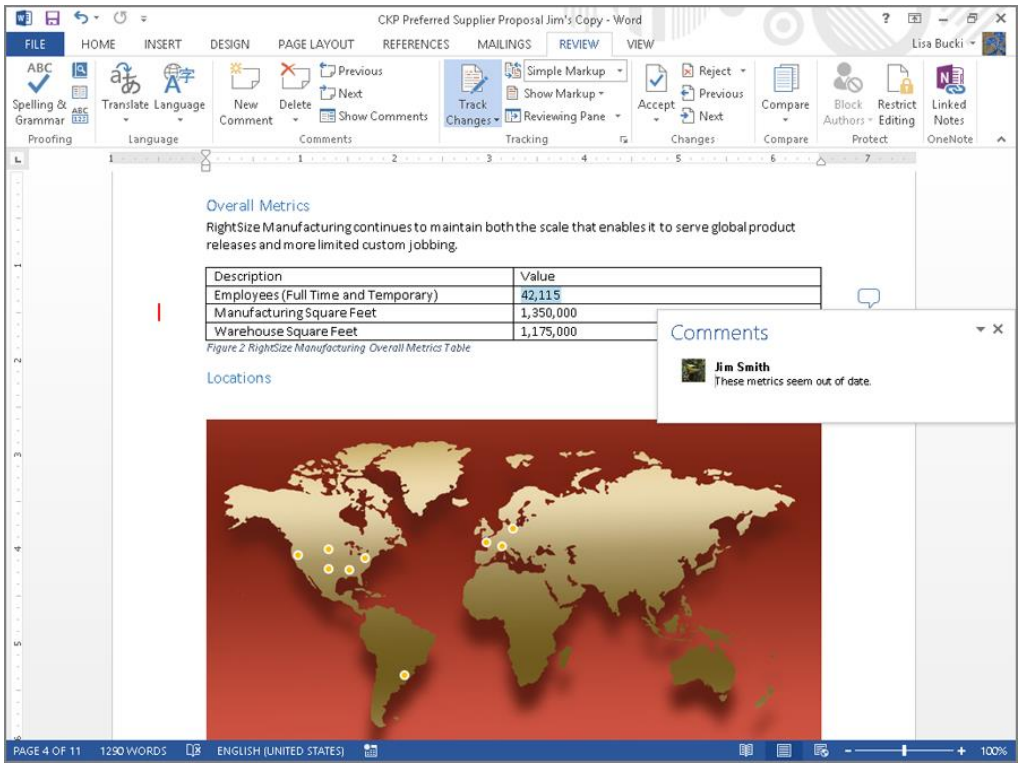

Viewing comments and tracked changes

Word includes two views for working with comments and tracked changes: Simple Markup and All Markup. Choose the overall view using the Display for Review drop-down menu in the Tracking group of the Review tab.

In the default Simple Markup view, shown in Figure 20.1 a comment balloon in the right margin shows you that there's a comment. A red line appears in the left margin beside any line(s) with tracked changes. To see the comment text and author, click the comment balloon. Click the balloon again to hide the comment information.

FIGURE 20.1

Simple Markup view initially hides comment text and tracked changes.

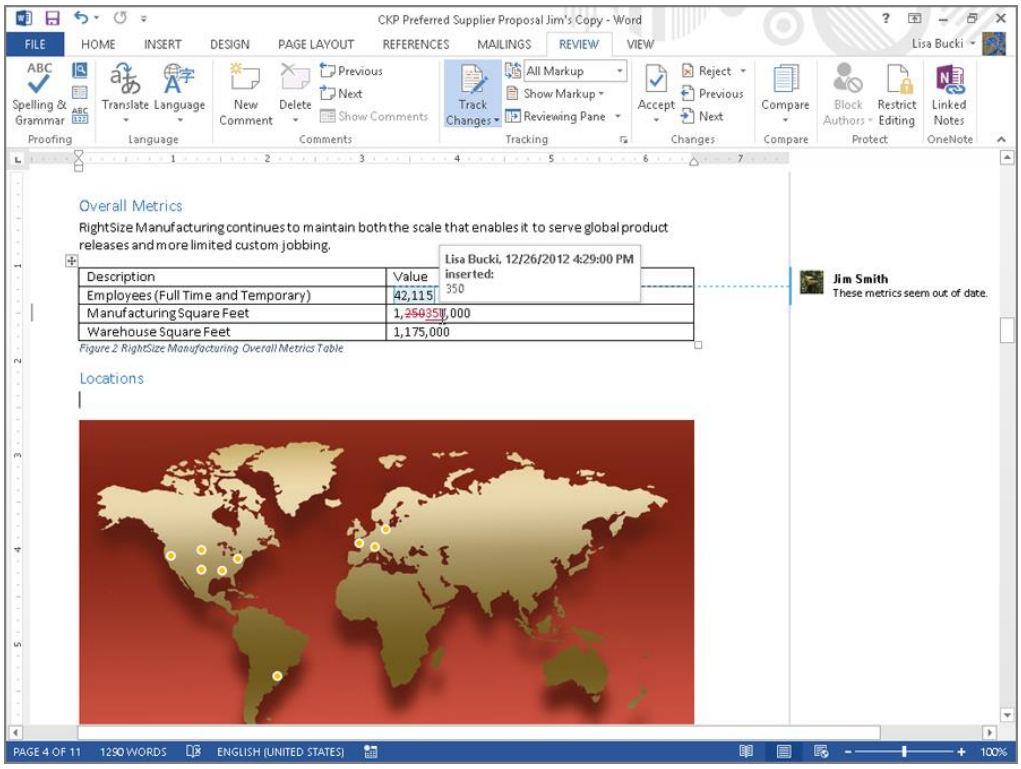

In All Markup view, shown in Figure 20.2, a comment area appears at the right side of the screen, and comment text appears there with a dashed line and highlight showing you the selected text that the comment refers to. These are also considered comment "balloons," although they don't look as much like balloons as they do in Simple Markup view. Tracked changes are marked up using a highlight color, strikethrough for deleted information,

and underlining for inserted information. If you move your mouse pointer over a tracked change, a tooltip appears to show you who made the change and when.

FIGURE 20.2

Hover the mouse over a tracked change to find out who made the change.

Inserting, editing, replying to, and deleting comments

To insert a new comment, first select the text that you want to comment about. Click the **Review** tab, and then click **New Comment** in the Comments group. In Simple Markup view, type your comment inside the yellow Comments box that opens, and then click the Close (X) button on the box. In All Markup view, a balloon appears in the right comment area. Type the comment, and then click in the text to return to normal editing.

Tracking changes by various editors

Unlike comments, tracked changes can be displayed inline. You also have a variety of options regarding which aspects of tracked changes to display.

Turning on Track Changes

To enable tracked changes, click the Track Changes button in the Tracking group of the Review tab. Notice that the upper and lower portions of that button are separate. Use the upper portion to toggle tracked changes, and use the lower portion to choose Track

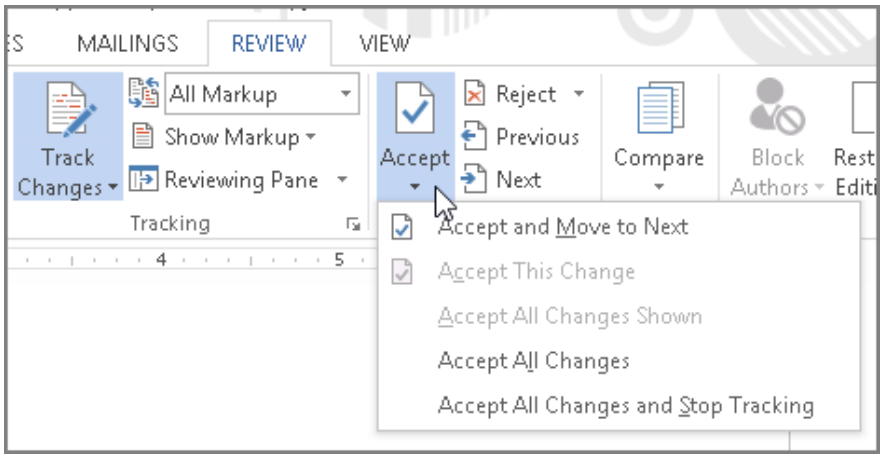

Changes or Lock Tracking. Lock Tracking enables you to add a password to prevent other users from turning off change tracking.

Accepting and Rejecting Changes

Use the Changes group of the Review tab, shown in Figure 20.3, to review changes to determine whether you want to accept or reject them. Use Next or Previous to navigate to the nearest comment or change. Use Accept and Reject to integrate or remove changes. You can also right-click a change and choose Accept or Reject.

FIGURE 20.3

Accept All Changes Shown is available only when some changes are hidden.

6- Proofing

Add Language & Proofing Settings

Choosing a Language

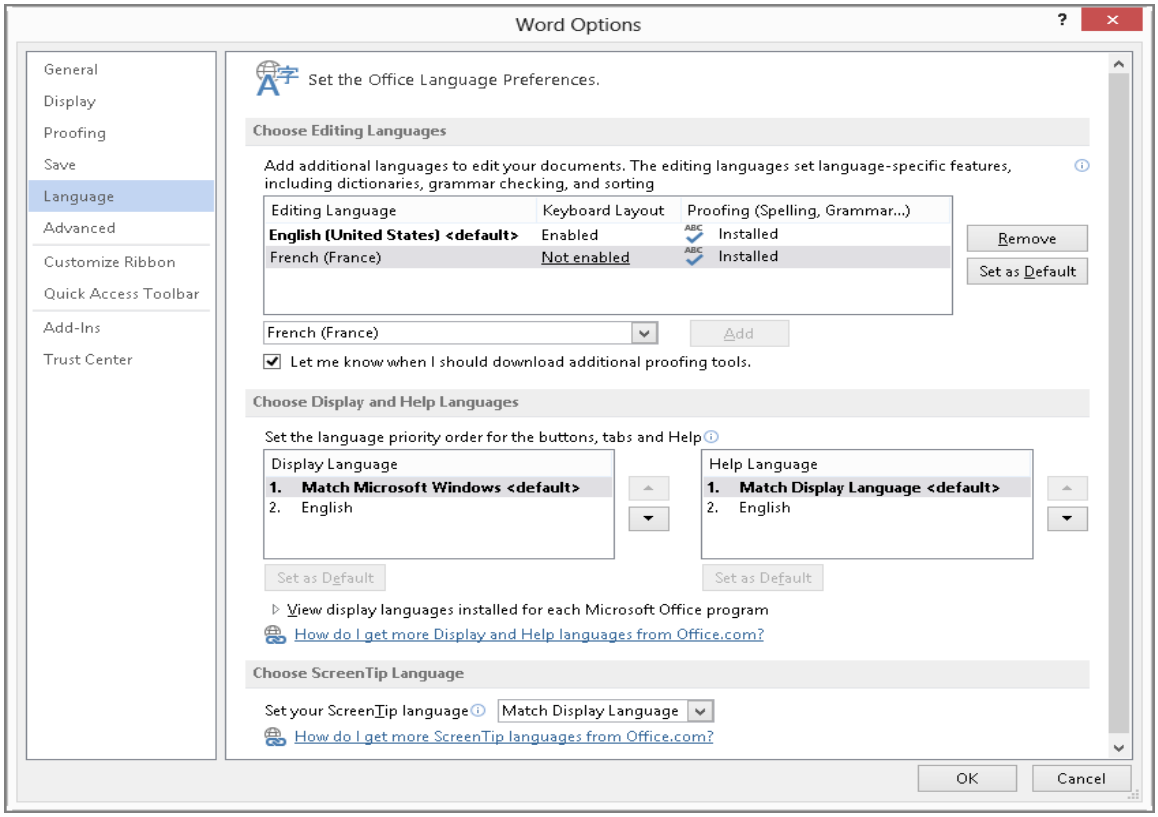

you can install another editing language for use with Word's language features such as spelling and grammar checking.

Install another editing language in Word Options:

1. Click the **File** tab, and then click **Options**.
2. Click the **Language** tab at the left side of the Word Options dialog box.
3. Open the [Add additional editing languages] drop-down list under Choose Editing Languages, scroll down if needed, and click a language to add.
4. Click the **Add** button. As shown in Figure 22.1, the new language appears in the list of editing languages. If desired, at this point you can click a language in the list and click Set as Default to make it the default language used for editing. Or you can set the default later, as described after these steps.
5. Click Ok, and then click Ok again at the message that tells you to restart Office.
6. Exit and restart Word.

FIGURE 22.1

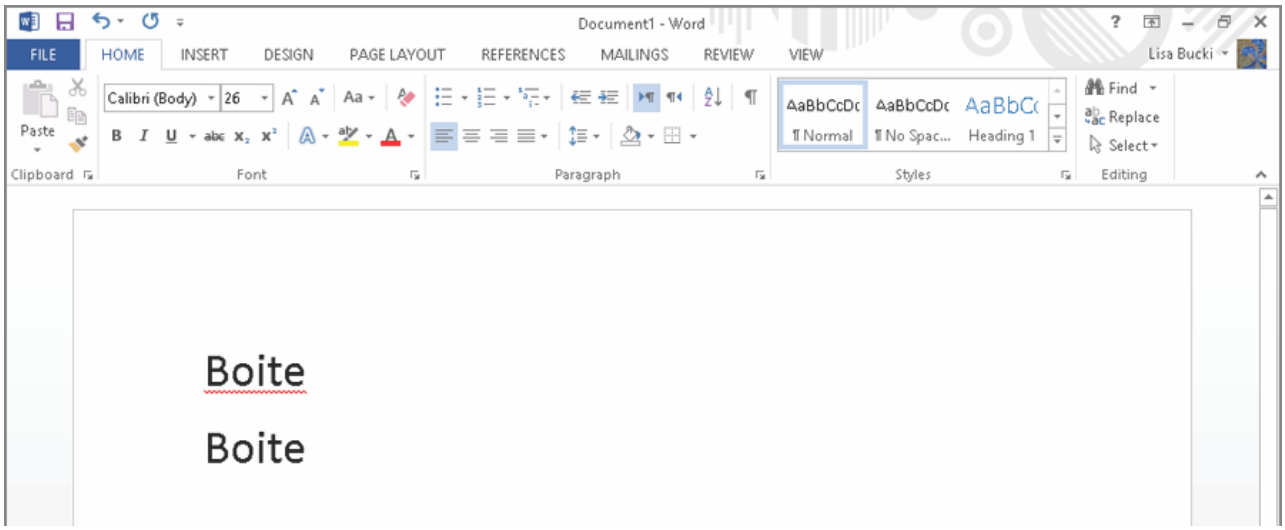

Add alternate editing languages in Word Options.

When you make this change, you may see wavy underlines for spelling and grammar errors appear or disappear, after Word automatically checks for errors using the new language. See Figure 22.2

FIGURE 22.2

Word checks spelling based on the specified language for checking a selection.

Checking Spelling and Grammar

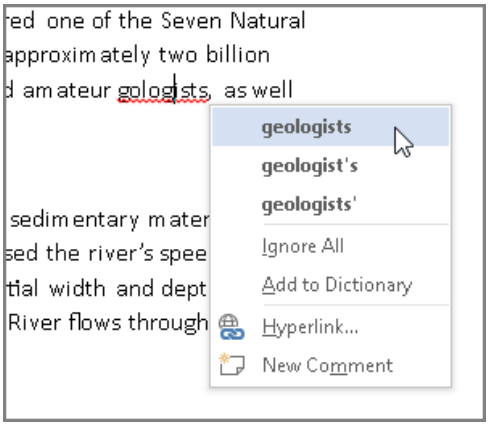

Word can check the spelling and grammar of a word, a selection, or a whole document. By default, Word checks both spelling and grammar.

Correcting flagged items

By default, Word automatically checks grammar and spelling. It marks potential spelling errors with a wavy red underline and potential grammar errors with a wavy blue underline. One option for cleaning up a document is to right-click a wavy underline, and then click a correction in the shortcut menu that appears.

FIGURE 22.3

Right-click any wavy underline to see a shortcut menu with potential corrections.

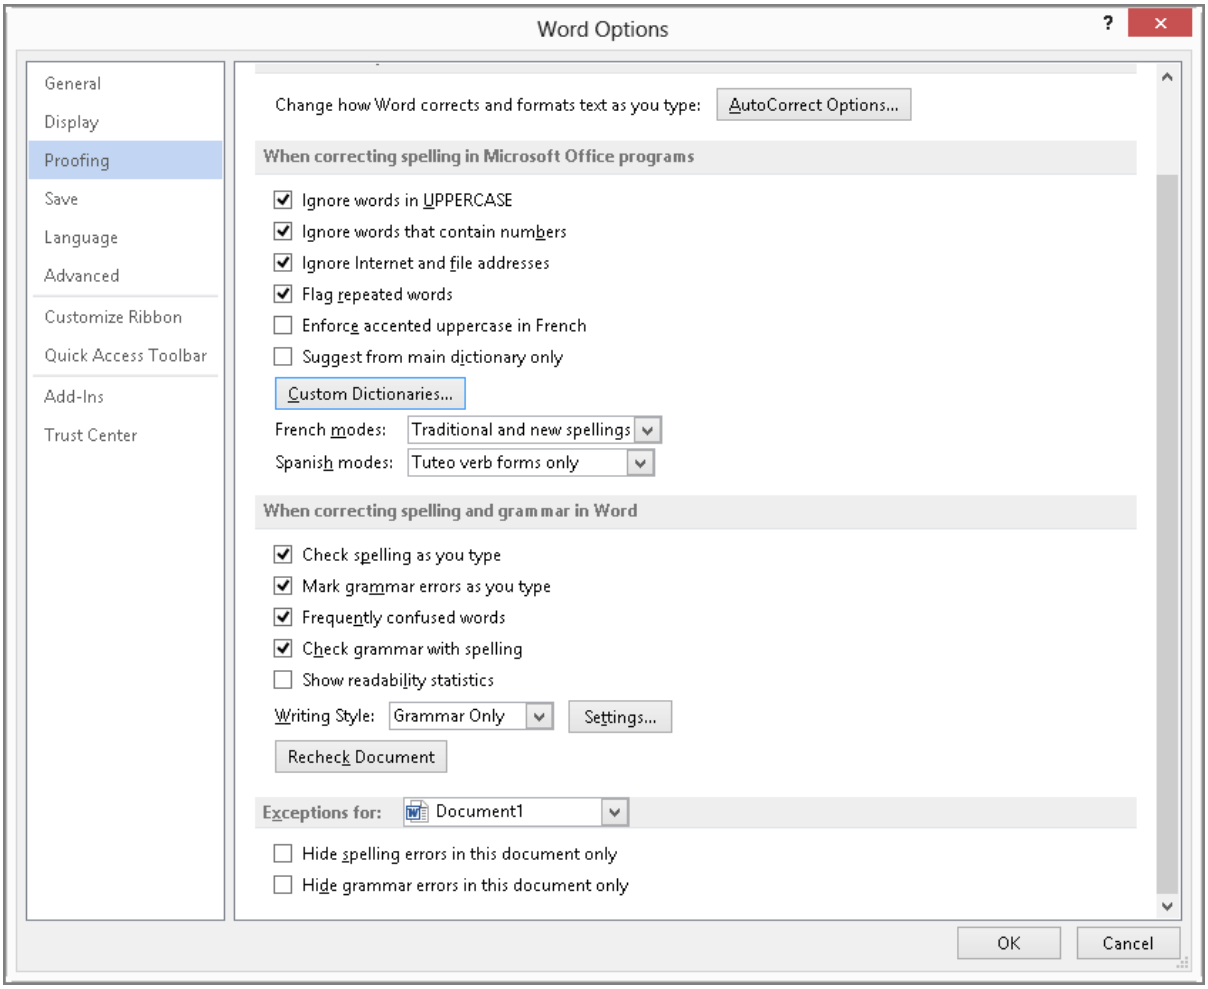

Setting spelling and grammar options

Choose **File** > **Options** > **Proofing** tab to display the full set of options.

FIGURE 22.4

Set detailed spelling and grammar options on the Proofing tab.

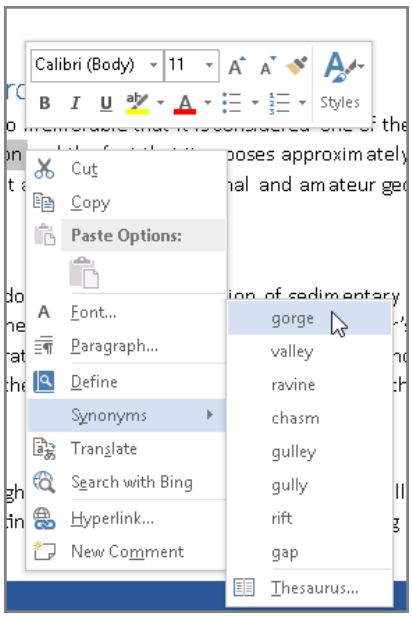

Choosing a Better Word with the Thesaurus

Word's proofing tools also include the thesaurus, which is useful for finding the right word to use in a particular sentence. Use the thesaurus to find and use synonyms,

One way to engage the thesaurus is to right-click the word in question and point to Synonyms in the shortcut menu, as shown in Figure 24.1. Click any word in the Synonyms list to replace the word you right-clicked.

FIGURE 24.1

Use the shortcut menu Synonyms list to find a better or different word.

If you want to browse more word choices for a selected word, click Thesaurus at the bottom of the shortcut menu, click Thesaurus ,The Thesaurus pane shown in Figure 24.2 appears at the right. You can click any synonym it lists to see synonyms for that word instead.

FIGURE 24.2

Use the Thesaurus pane to find a better or different word.

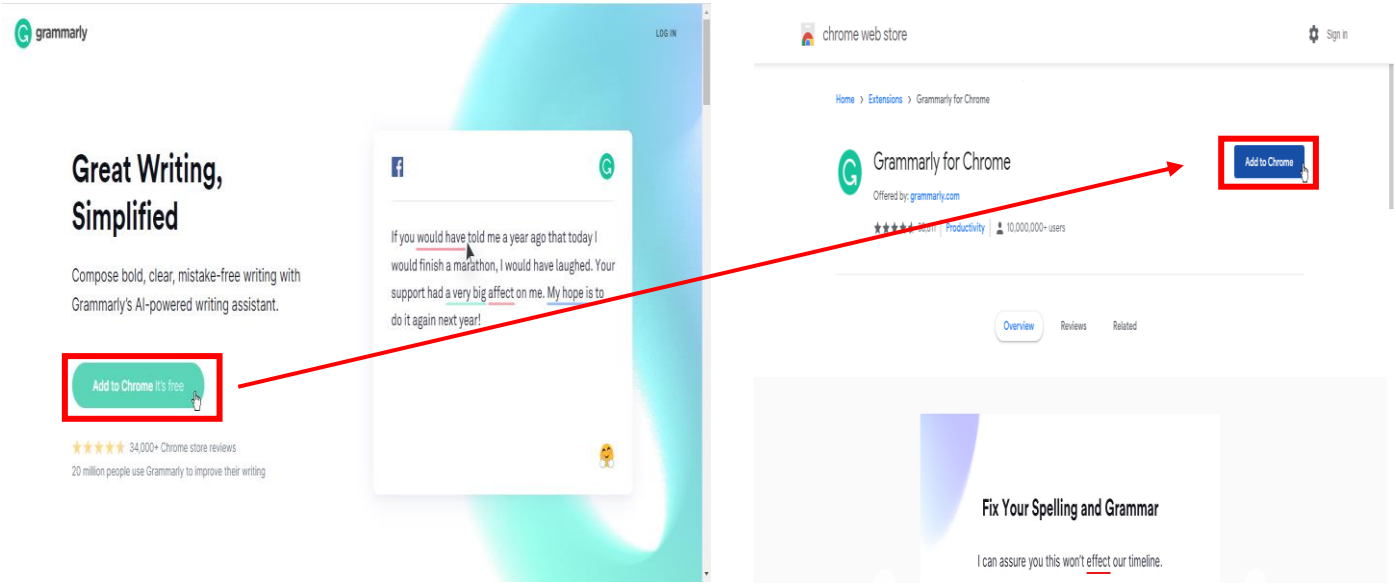

Grammarly

Grammarly On Google Chrome

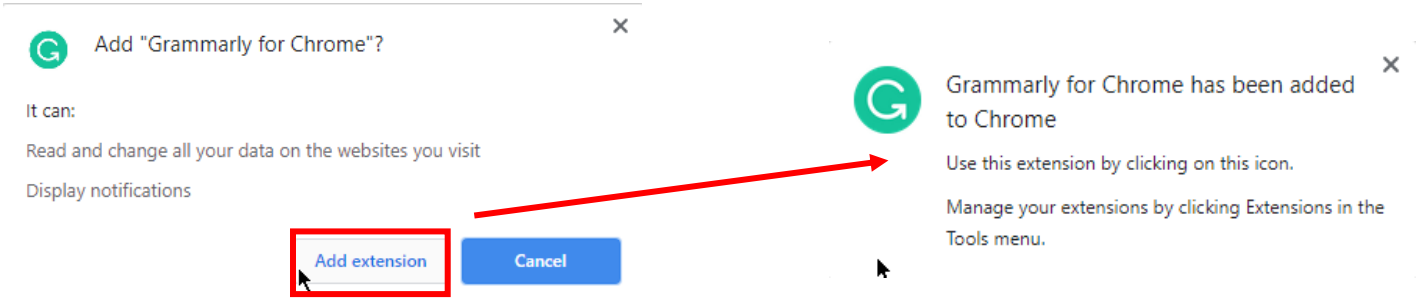

Grammarly offers us grammar-checking, spell checking while we are writing any message or document, it can be used inside Google Chrome while we are on the internet, or from Microsoft Word, to proof editing our text.

Using Grammarly as addon from chrome:

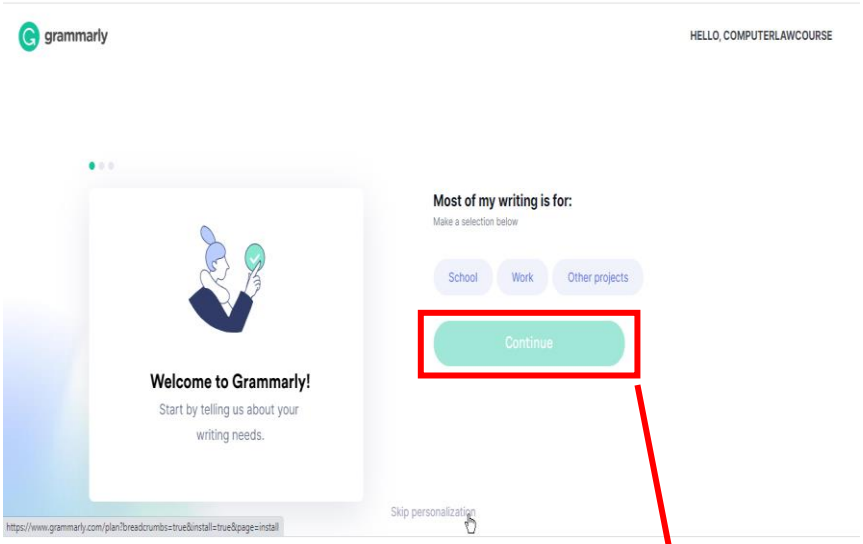

1. Go to Grammarly.com and press the **Add to Chrome** button in the middle of the page.
2. it will take us to the chrome web store to add the Grammarly add on to google chrome, we choose **Add to Chrome** on the Right corner.

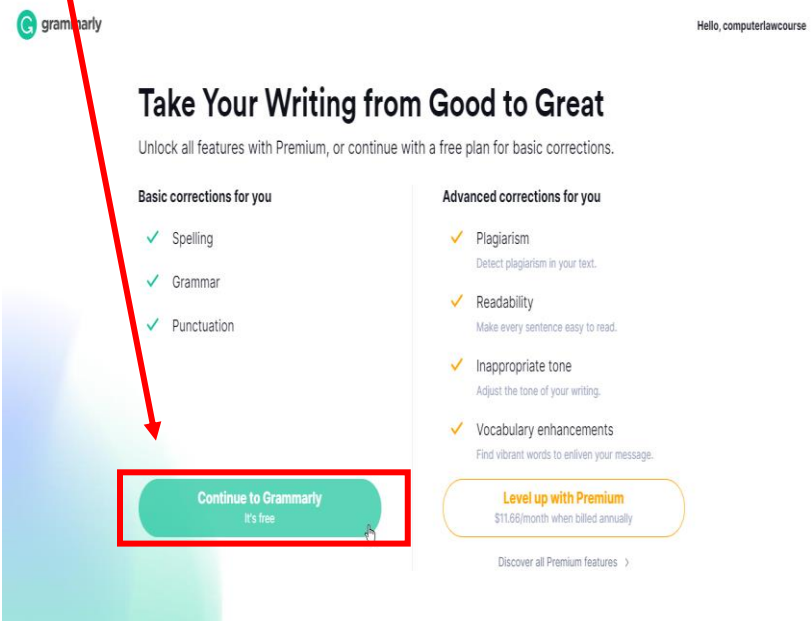

3. next, it will ask to agree to add the Grammarly addon ins chrome, we click Add extension

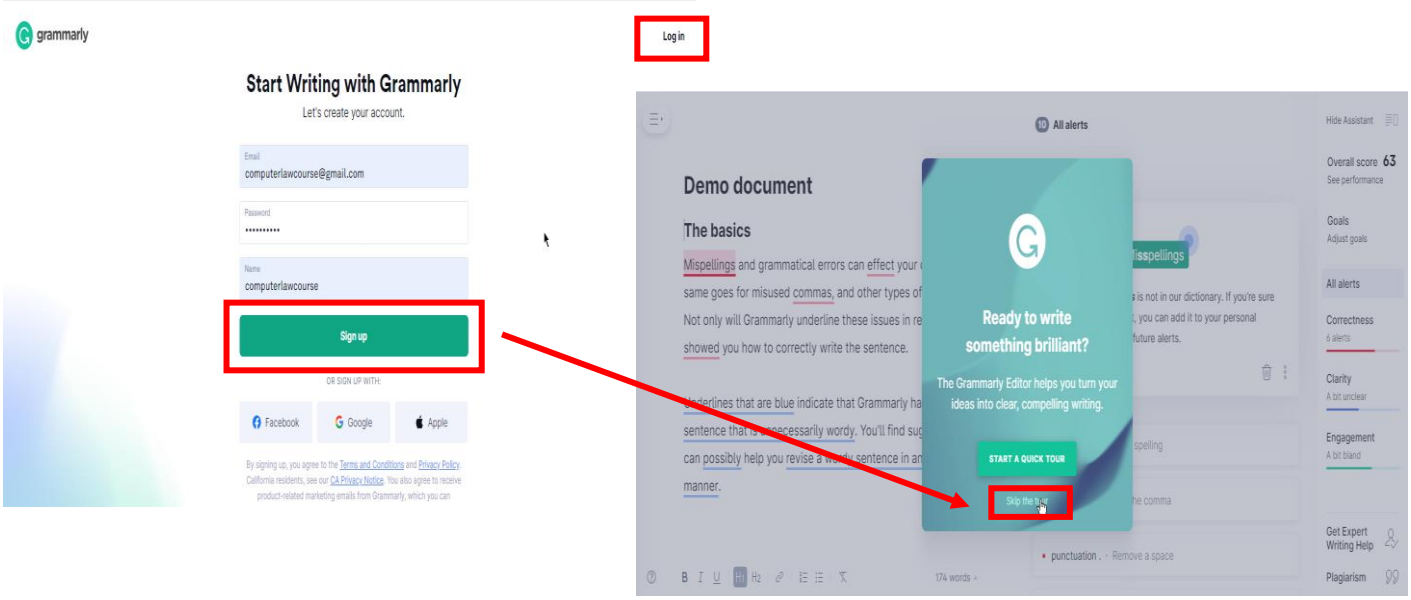

4. After that, just press **Skip personalization** and **Continue to Grammarly** like the next pictures.

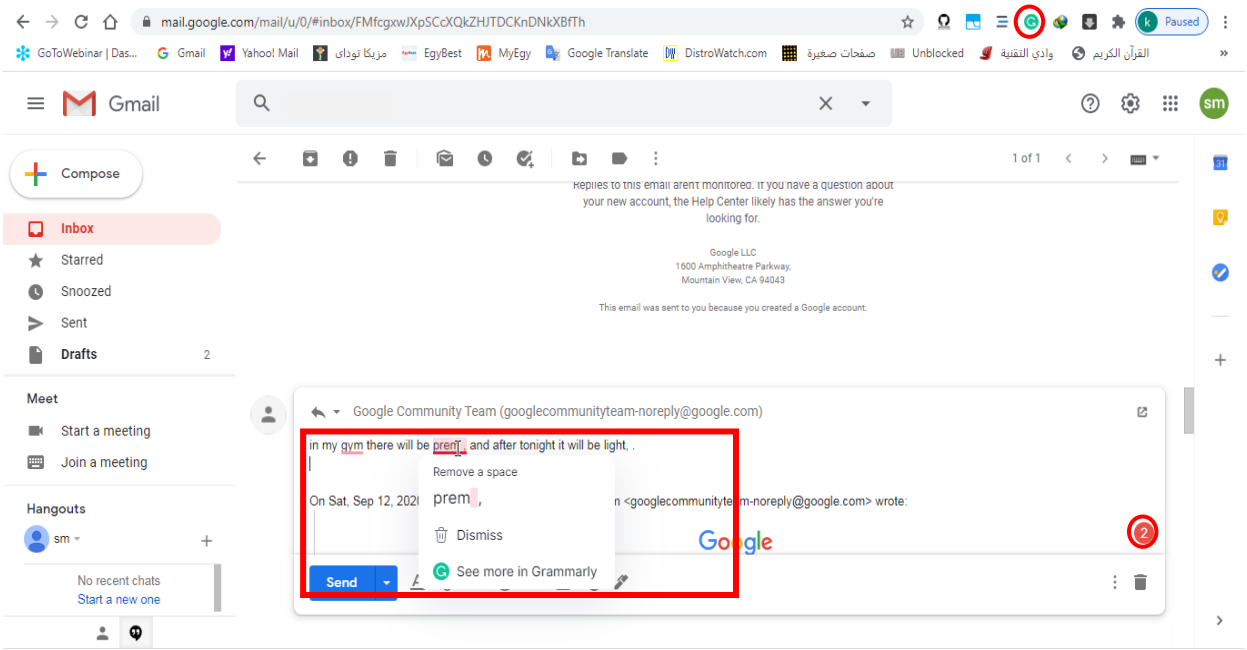

Tip: Grammarly considers an online program, so to use it we must have an ongoing internet connection, even when we use it under Microsoft word, and we must make an account through its website.

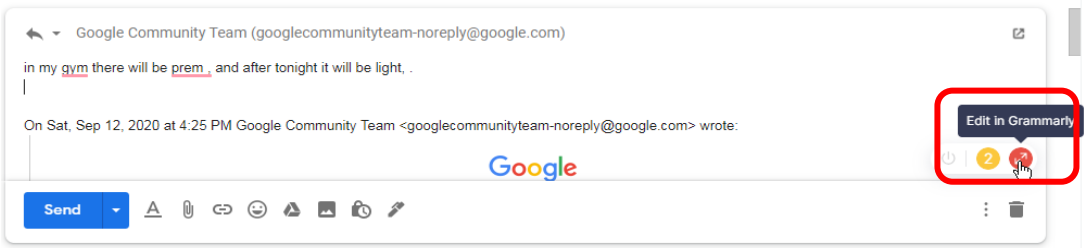

5. After that start **Sign up** process by entering your email address, password, and username, to make a new account on Grammarly, if you already have an account consider using it by clicking the **Log in** button on the upper right corner, after that press the **Skip the tour** link button.

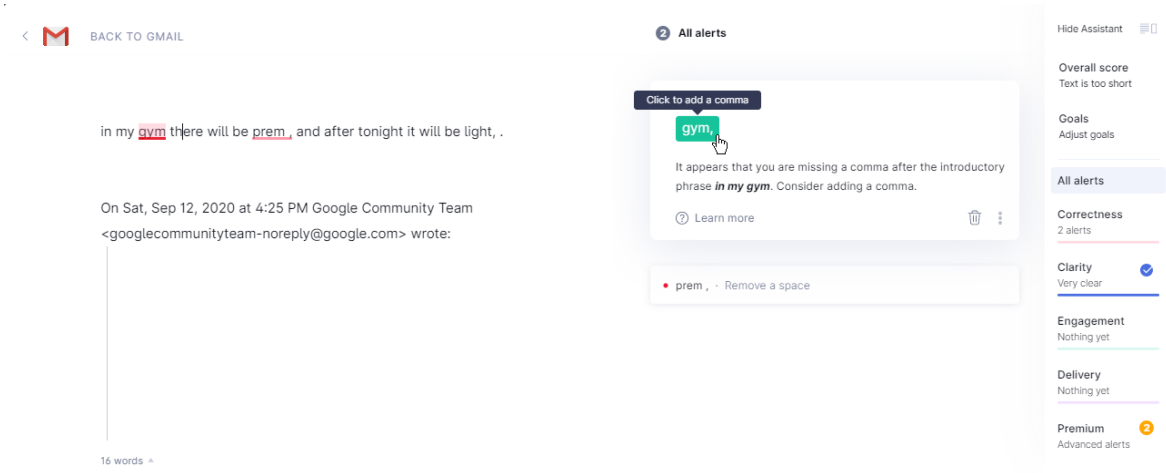

6. After that, we will see the Grammarly addon icon on the top right corner of the link bar beside any other addon we are using.
7. On order to start using Grammarly inside our website like Gmail all, we have to do is to start typing our text and then we will that Grammarly catch any mistake by drawing a red line beneath it, hovering the mouse over this line will show us Grammarly menu of the right words and correction to use.

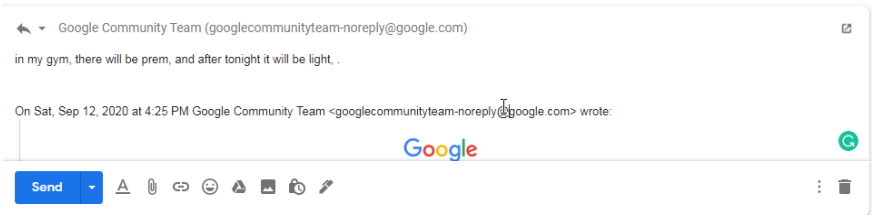

8. On the right bottom of our editing message on Gmail we can see the red icon of Grammarly and beside it the number of errors it catches, by clicking this red icon it will go the Grammarly editor for editing our text

9. on Grammarly editor, we will see all errors on the right pane, and the editing text on the left, clicking any red line word will give us the right word on the right pane, and after that pressing the green right word will fix the mistaking word for us.

10. By closing the editor, it will bring us back to Gmail compose message text box and we can see it fix all our grammar and spelling errors.

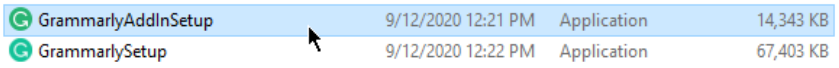

Grammarly On Microsoft Word

Grammarly can be used from Microsoft Word to proof editing our text and check grammar and spelling.

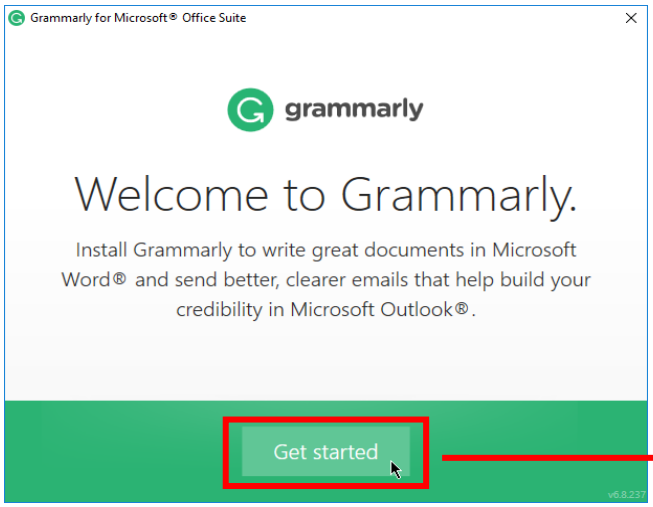

Tip: Grammarly considers an online program, so to use it we must have an ongoing internet connection, even when we use it under Microsoft word, and we must make an account through its website, and have a working internet connection.

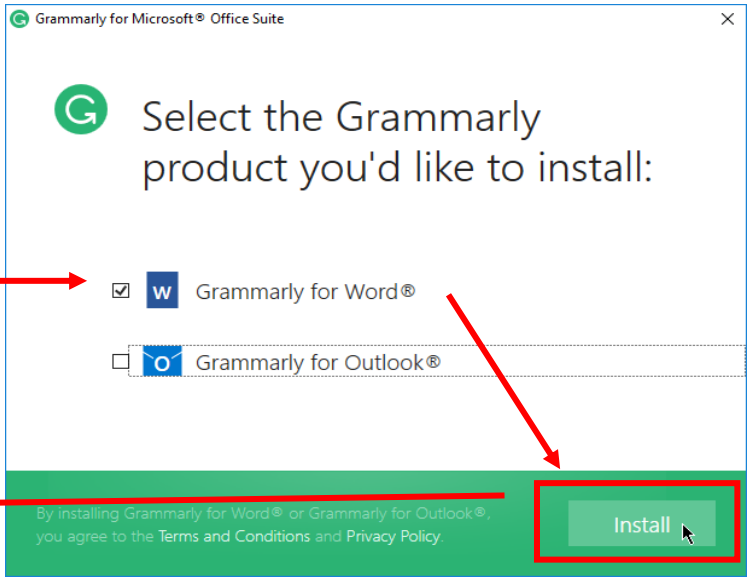

Using Grammarly from Word:

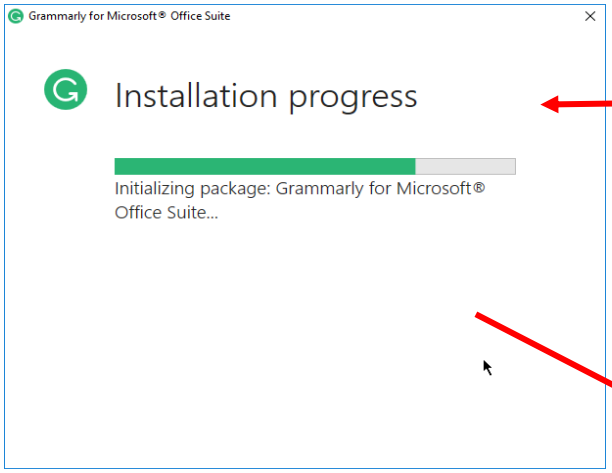

1. Go to Grammarly.com and Download The GrammarlyAddInSetup.

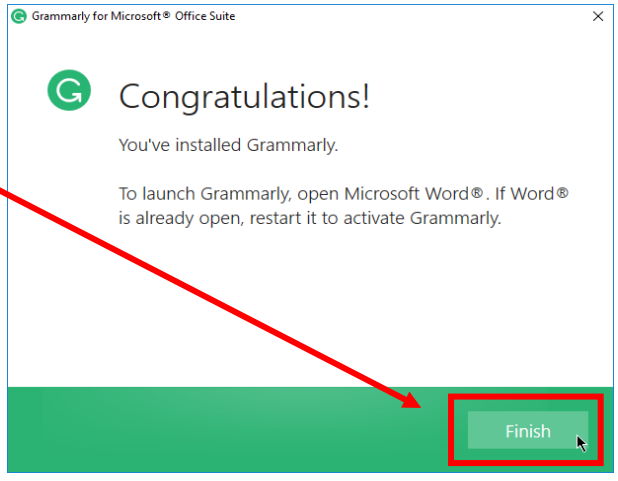

2. Start the setup, and it will start adding the addons for word and Microsoft outlook if we would like to.

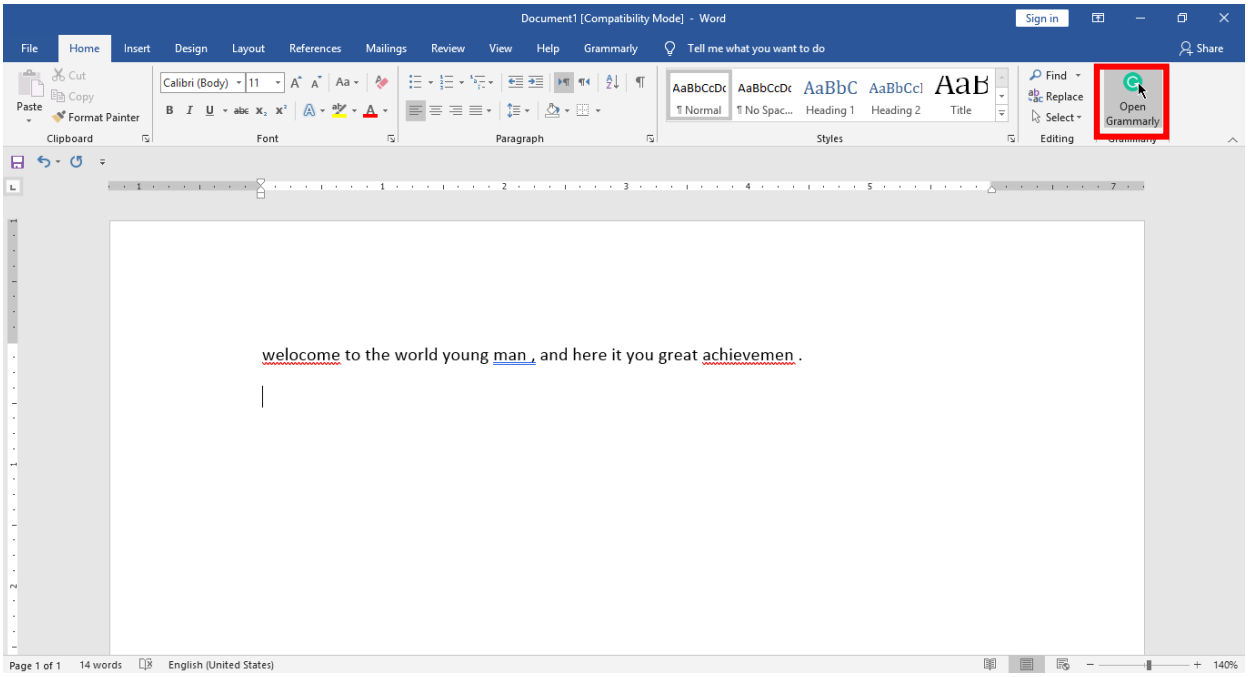

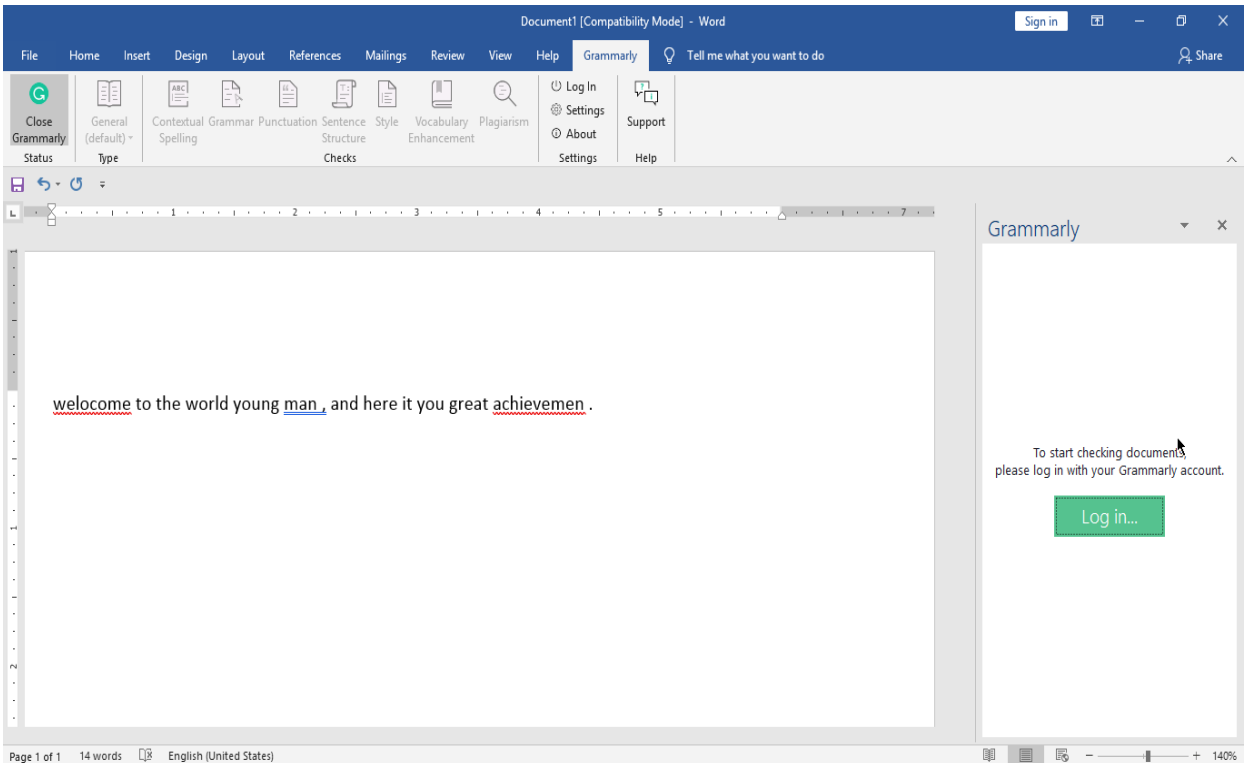

3. After setup the Grammarly Add on finishing, we start word and start typing our text, and for Grammarly to start checking our text we click the Open Grammarly button on the Top Right Corner.

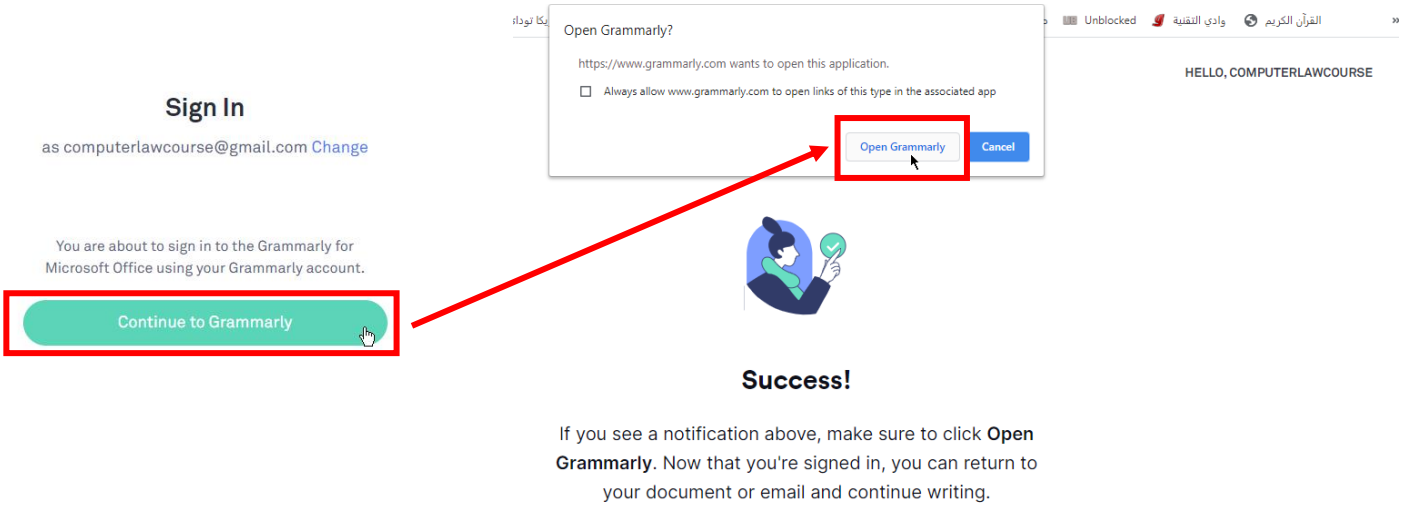

Tip: after installation, the Open Grammarly Button Will have a little red number above it that indicates the number of the grammar and spelling errors that it catches .

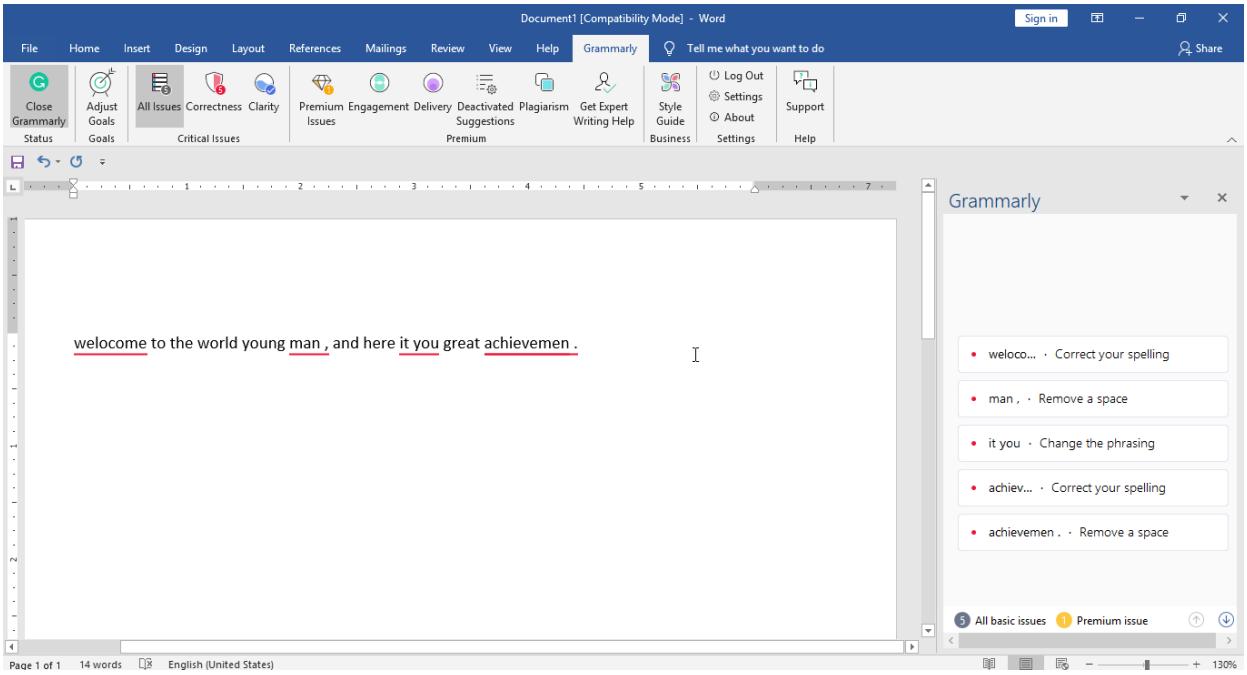

4. here Grammarly will try to connect to the server or the internet to start the signing process.

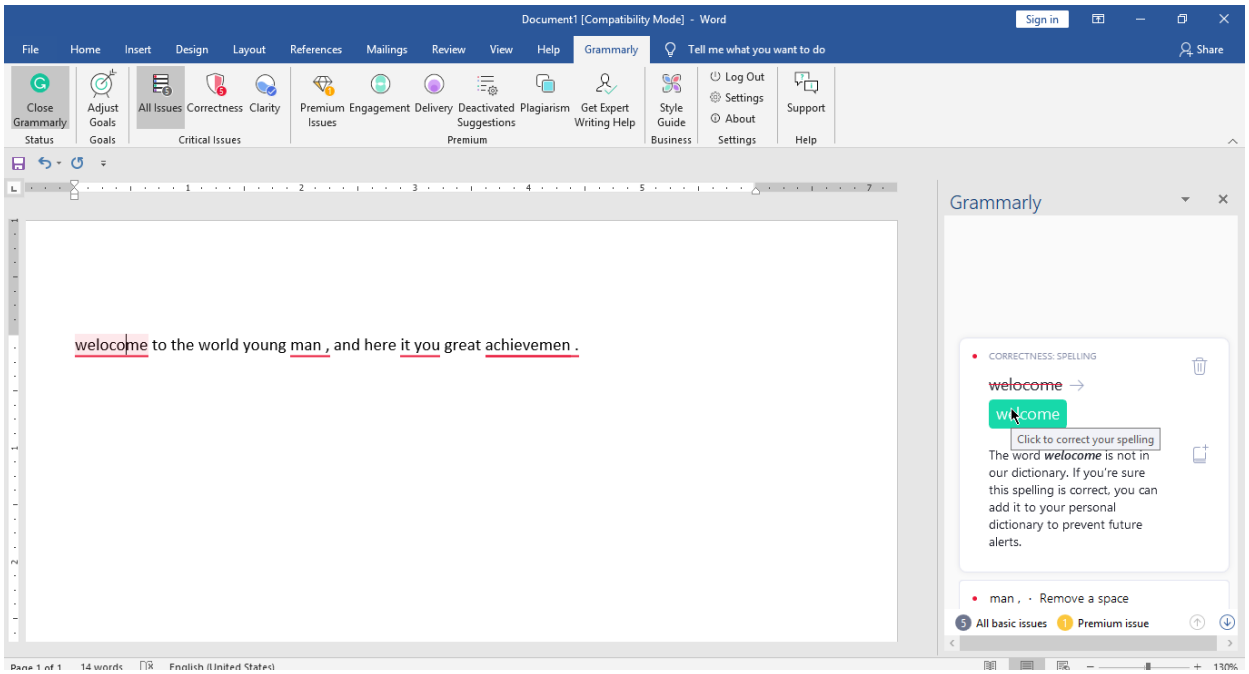

5. it will start the web browser to complete the sign-in process, we enter our logging data, and choose **Continue to Grammarly**, and then **Open Grammarly** Button to get back to Microsoft Word and our working file

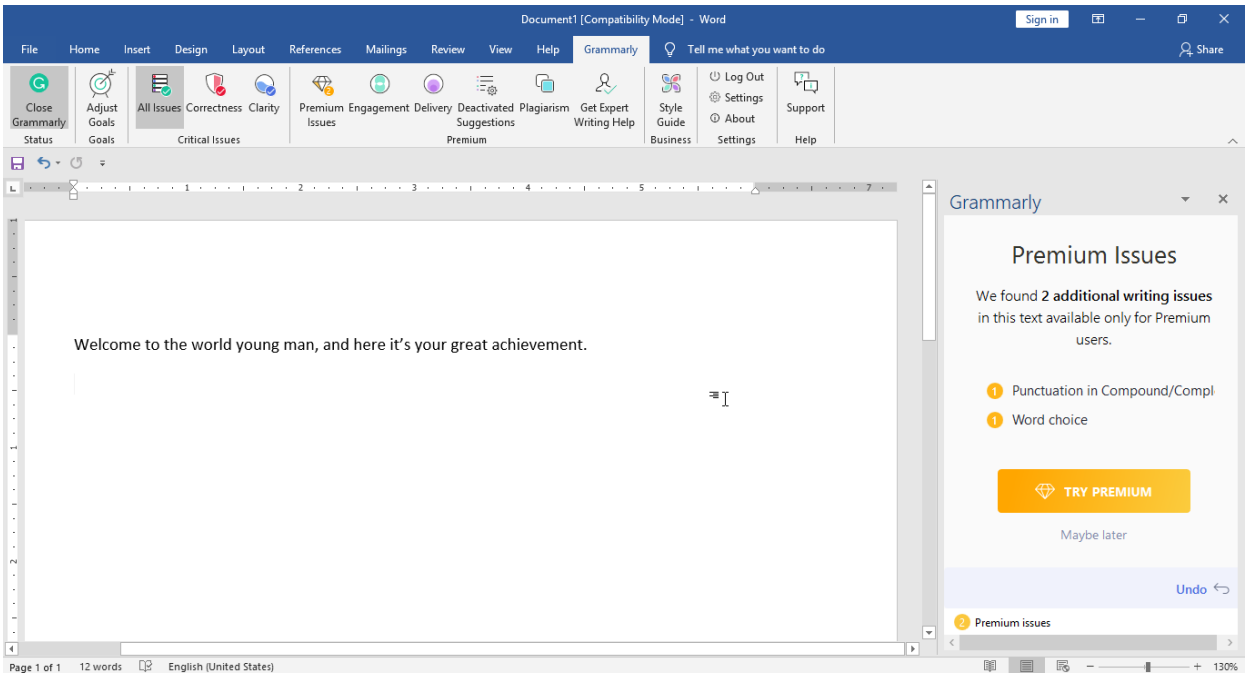

6. Starting the Word back, we will find the Right pane of Grammarly, it will show us all the grammar and spelling mistakes that Grammarly catch inside our text, and for every word that the program thinks it has something wrong will have a little red line beneath it.

7. In order, the correct this mistakes all we have to do is to click on any of the red line words and it will bring us to the Grammarly pane with an explanation about this mistaken word, and to correct it all we have to do is just press the green button with the correct word.

Tip: Correcting all the Grammarly catching error doesn't mean that we stop prof editing our text with our self, after all, Grammarly still consider a software, and even it used a sophisticated AI doesn't mean it will be 100 % Perfect for all cases.

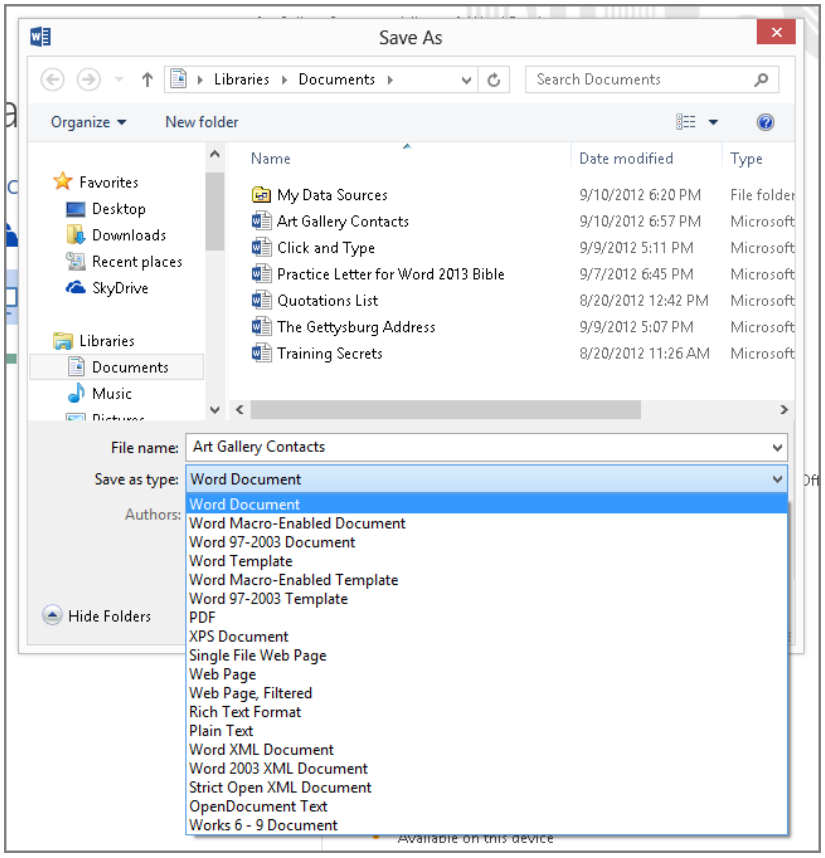

Printing & Save As PDF

Using Save As To Save As PDF

choose **File > Save As,** click Save as type to display the choices shown in Figure 28.1. Click a PDF choice in the list, specify the file name, and then click Save.

FIGURE 28.1

Use the Save as type drop-down to select another file format.

Printing a Document

Here are the steps for printing a document:

1. **Choose File > Print.** A preview of the first page of the document appears.
2. To print more than one copy, change the Copies text box entry.
4. Under Printer click the drop- down box, and then click the desired printer in the list.
5. Under Settings, use the various drop-down lists shown in Figure 28.2 to fine- tune aspects of the printout. These include:

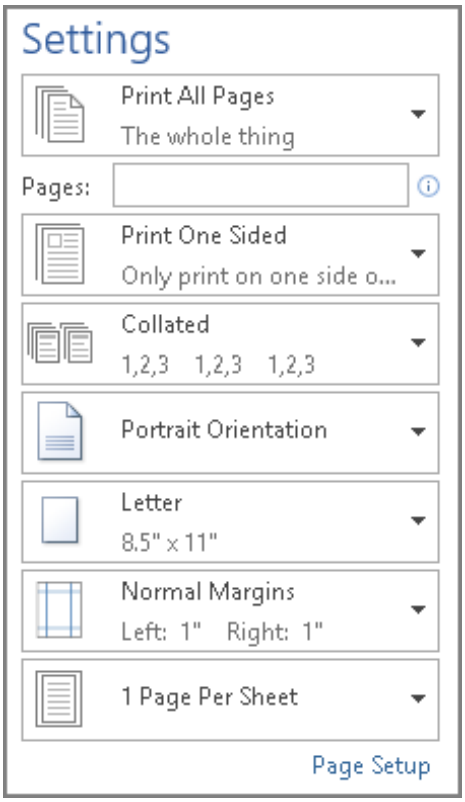

- **Number of pages:** Either use the drop-down to specify a range such as a section or selection, or enter the pages to print in the Pages text box. You can use a hyphen to

specify a range of pages (1-3), separate noncontiguous pages with commas (5, 7), or combine the two (1-3, 5, 7).

- **Sides and flipping:** If your printer can print on both sides, you can specify two- sided printing with the second drop-down.
- **Collated or Uncollated:** When printing multiple copies of a document, this determines how the pages will emerge. For example, if you printed 10 copies of a 24-page document, selecting Collated would print 10 separate copies of the document, but selecting Uncollated would print 10 page 1s, followed by 10 page 2s, and so on.
- **Orientation:** Set up the document to print in Portrait Orientation (tall) or Landscape Orientation (wide).
- **Paper size:** Select the size that you've loaded into your printer from this drop- down list.
- **Margins:** If you didn't change the margins prior to printing, you can use this drop-down to choose a different margin setting than the one initially shown.
- **Pages per sheet:** If the selected printer is capable, use this drop-down to print up to 16 Pages Per Sheet or scale the printout.

FIGURE 2.32

Take a careful look at print settings before sending the document to the printer.

6. **Click Print.** Word sends the page to the printer.

Best Microsoft Word Keyboard Shortcuts

Shortcut	Description
General Program Shortcuts	
Ctrl+F	Open find box.
Ctrl+N	Create a new document
Ctrl+O	Open an existing document
Ctrl+S	Save a document
Ctrl+W	Close a document

Up/Down Arrow	Move to the previous or next row
Shift+Up/Down Arrow	Select the cell in the row above or below the insertion point or selection.
Alt+S on keypad (with NumLock off)	Select an entire table

What can you do with Calendar?

With Google Calendar, you can quickly schedule meetings and events and get reminders about upcoming activities, so you always know what's next. Calendar is designed for teams, so it's easy to share your schedule with others and create multiple calendars that you and your team can use together.

Schedule events

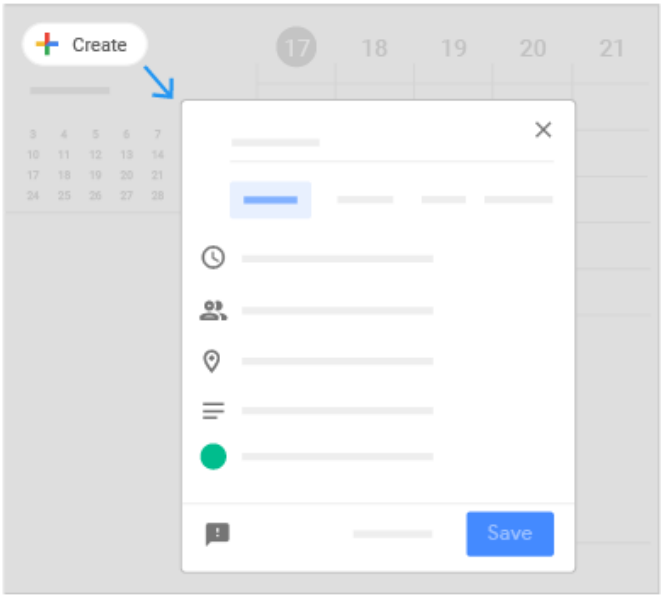

Schedule one-time activities, such as conferences, as well as recurring events, such as staff meetings.

Create an event

1. In Calendar , choose an option:

- Click an empty time slot in the calendar grid.
- Click Create.

2. Add an event title, date, and time.
3. (Optional) To create the event on another calendar you have edit access to, at the bottom click your calendar name and select another calendar.

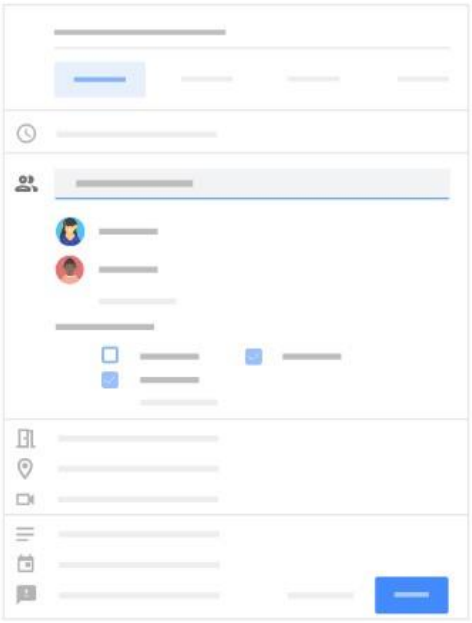

Add guests

1. In the **Add guests** field, enter the first few letters of a person's name or email address.
2. Click a suggestion to add that person to the event. If no suggestions appear, enter your guest's full email address. After you add a guest to your event:
3. (Optional) To allow guests to modify the event, invite others, or see the guest list, click Guest permissions and check the appropriate boxes.

Tip: If you're not the organizer of the meeting but you have permission to edit the event, you can follow these steps to invite people to a meeting.

Note: If you create an event in Calendar and don't give guests permission to modify the event, they can't change the event's date or time on their own calendar.

Note: in case you want to add those emails automatically or get them from the google contacts label, first go to the wanted label and then from inside this label add a new message and click one of the emails then press Ctrl+A to select all the emails in this contact label , after that at the 'Add guests' textbox press Ctrl+V to paste them.

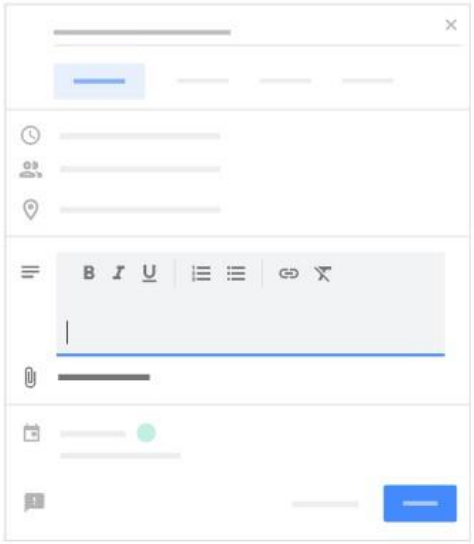

Add a meeting location:

Click Add location and enter your details. Suggestions automatically appear.

Add an event description:

1. Click the Add description or attachments field.
2. Add details, such as contact information, instructions, or links for your event.
3. (Optional) Format your description by bolding, italicizing, underlining, or adding lists and links.

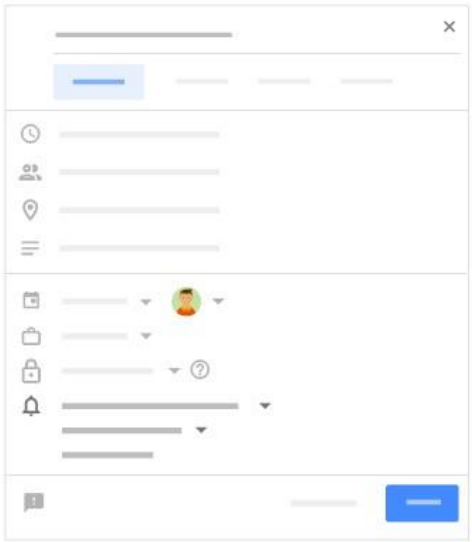

Choose a calendar

- Add your event to a different calendar—For your event to appear on a different calendar, click your calendar name and select a different calendar.

Set event-specific notifications:

1. When you're creating your event, at the bottom, click **More options**.
2. Click **Add notification**.
3. Select a time period for notifications.
4. (Optional) To add another notification, click **Add notification** and repeat steps 2-3.

Save your event

When you’re finished filling in the details, save your event and send your invitations.

1. Click Save.
2. Choose an option:

- Send to notify guests by email
- Don’t send to skip notifications at this time
- Dismiss to continue editing the invitation

3. If you’re inviting people from outside of your organization, click:

- Invite external guests to notify them.
- Continue editing to notify them later.

4. (Optional) To open your event on the Edit event page, click More options.

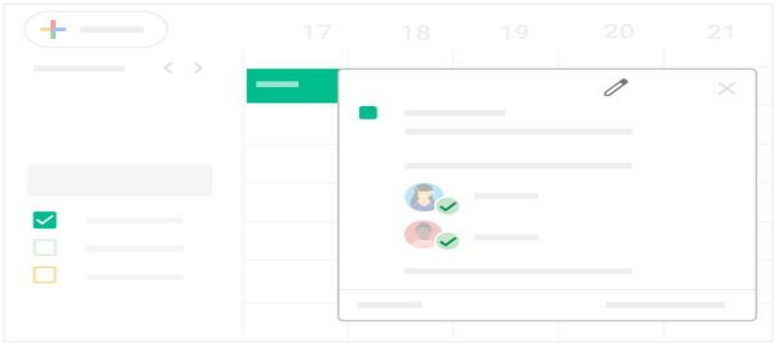

Update an existing event

You can invite more guests and change the meeting location.

1. In the calendar grid, click the event > Edit .
2. To invite more guests, change the meeting location, or add attachments, make your changes and click Save.

Note: If the event organizer hasn’t given you edit permissions, you can't make changes to the event time or its duration.

Delete an event

If you delete an event, it remains in a calendar’s trash for approximately 30 days. After 30 days, it’s permanently deleted, but you can permanently delete it before that if you want.

Delete an event:

1. In your calendar grid, click the event,
2. Click Delete .

5.1 Choose your calendar view

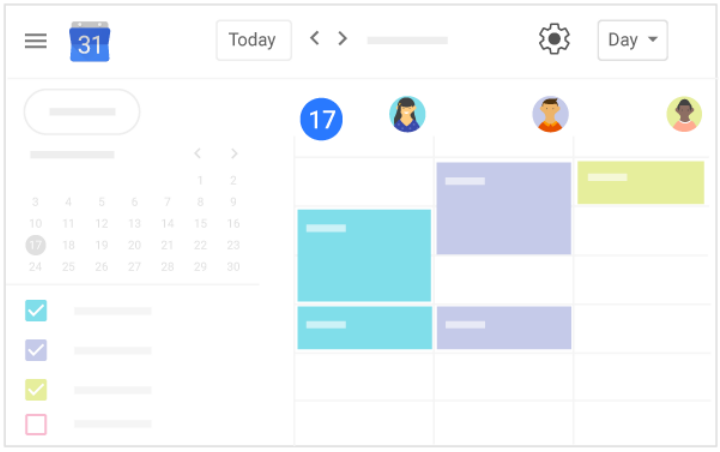

You can choose how many days you see at a time in your calendar view. Select the option that's best for you at the top of your calendar.

Choose your calendar view:

1. At the top right in the calendar view box, click the Down arrow and choose an option:

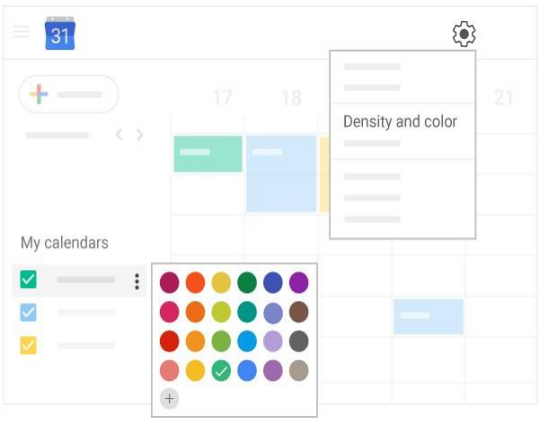

- View a calendar by day, week, month, or year
- View your schedule
- Hide or show weekends
- Hide or show declined events

2. To view the next or previous day's calendar—next to Today, click Next or Previous .

5.2 Change your calendars' color set:

1. On the left under My calendars, point to the calendar.
2. Click More and select a color or click Add to choose a custom color.

- Power Point

Creating a Slide from the Slides Pane

Here's a very quick method for creating a new slide, based on the default layout:

1. Switch to Normal view if you're not already there (View ➪ Presentation Views ➪ Normal).
2. In the Slides pane, click the slide that the new slide should follow.
3. Press **Enter.** A new slide appears. You can also right-click the slide that the new one should follow and choose New Slide.

Themes

Themes, also called design themes, contain a combination of colors, fonts, effects, backgrounds, and layouts.

Applying a Theme from the Gallery

The Themes gallery is a menu of all of the built-in themes plus any additional themes available from the current template or presentation file.

To select a theme from the gallery, follow these steps:

1. (Optional) If you want to affect only certain slides, select them.
2. On the **Design** tab, in the **Themes** group, if the theme you want appears, click it.

FIGURE 2.1

Open the Themes gallery by clicking the down arrow with the line above it.

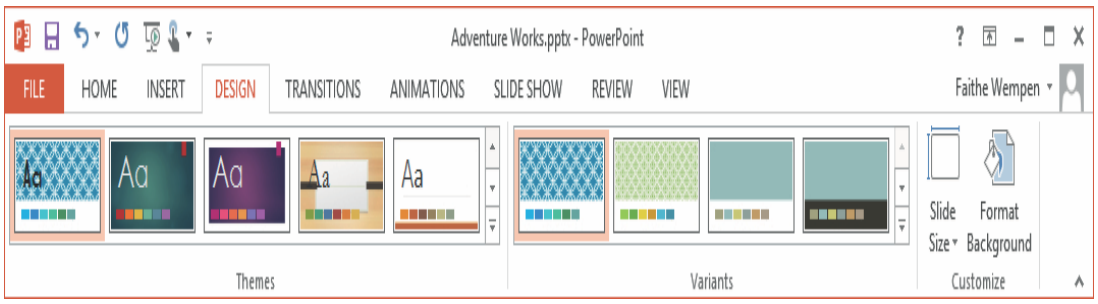

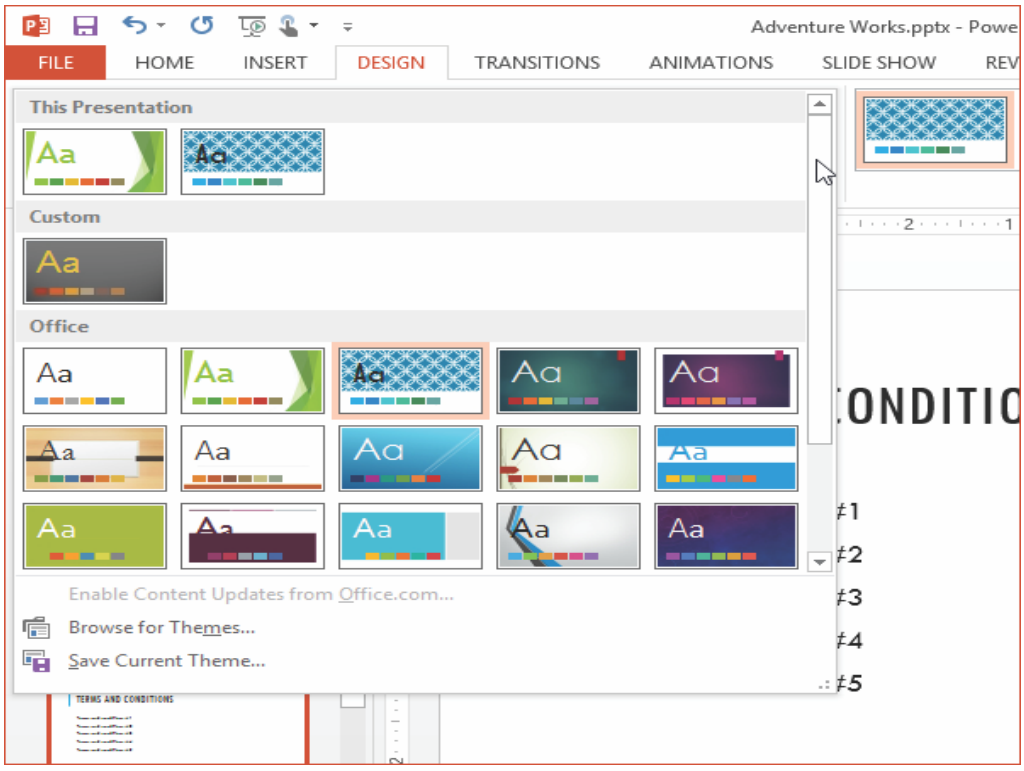

FIGURE 2.2

Select the desired theme from the menu.

You can drag the bottom-right corner of the menu to resize the gallery.

3. **Click the theme you want to apply.**

   - If you selected multiple slides in step 1, the theme is applied only to them.
   - If you selected a single slide in step 1, the theme is applied to the entire presentation.

Changing the Background

The **background** is the color, or image that is applied to the entire slide

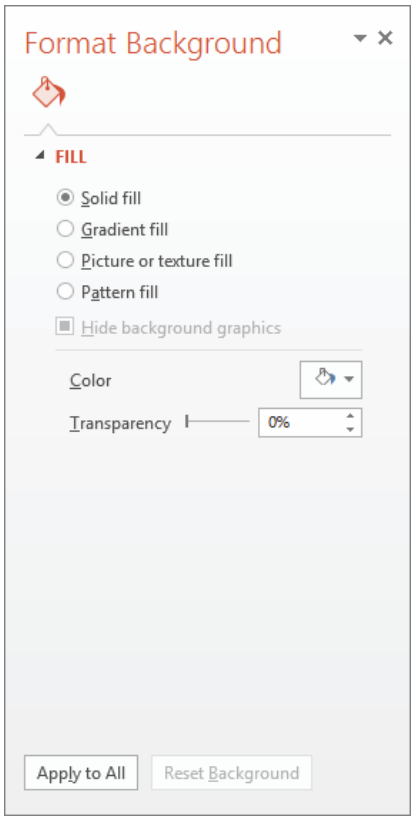

Applying a Custom Background Fill

1. To affect only certain slides, select them.
2. **Click Design ⇨ Customize ⇨ Format Background.** The Format Background dialog box opens.
3. **Choose the option button that best describes the type of fill you want.** Figure 2.3 shows the controls for a solid fill.
4. **Set the options for the fill type that you chose.** For example, in Figure 2.3, click the Color button and choose a color. The changes you make apply immediately.

5. **(Optional) To apply the change to all slides, click Apply to All.** Otherwise the change will apply only to the slides you selected in step 1.
6. When you are finished with the Format Background task pane, click its Close (X) button in its upper right corner to close it.

FIGURE 2.3

With the Fill icon selected, choose the fill type that best fits your needs.

Working with Background Graphics

In Figure 2.3, one of the fill types you saw on the list was Picture or texture fill. This type of fill covers the entire background with the picture or texture that you specify.

Creating a Manual Text Box

To manually place a text box on a slide, follow these steps:

1. **Click Insert ⇨ Text ⇨ Text Box.** The mouse pointer turns into a vertical line.
2. **Type the text that you want to appear in the text box.**

Drawing Lines and Shapes

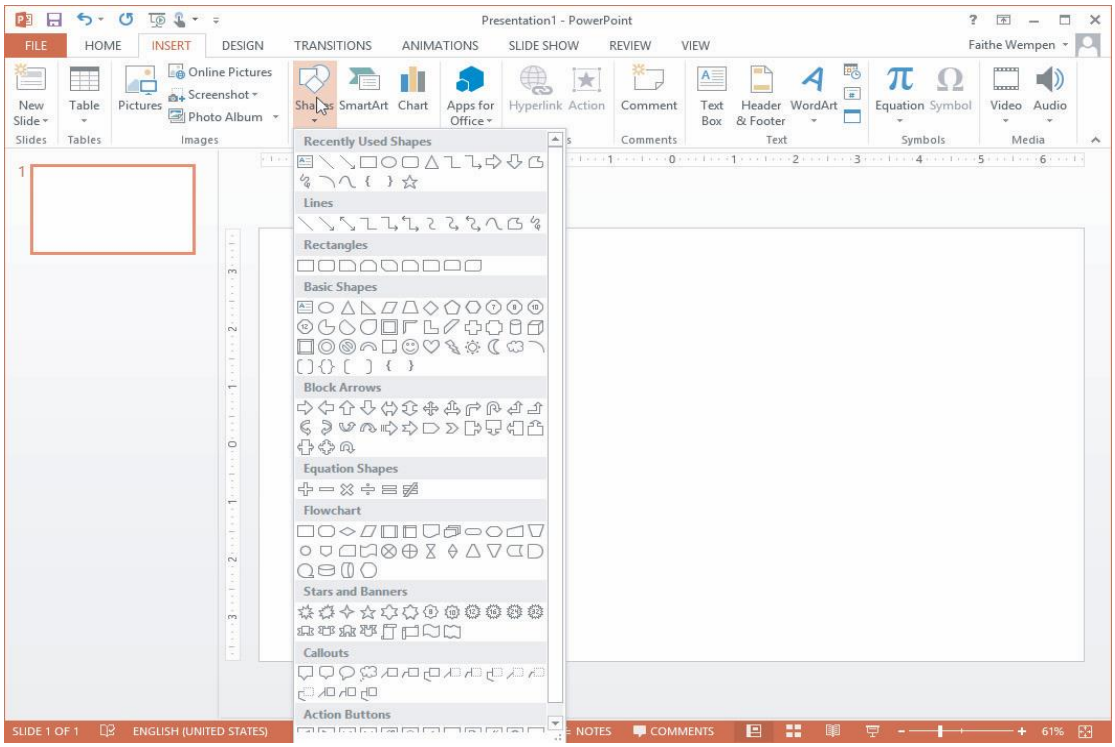

The drawing tools in PowerPoint are the same as in other Office applications. For example, Word and Excel both have identical toolsets. The Shapes button appears on the Insert tab, and you can click it to open a menu of the available shapes, as shown in Figure 2.4.

To draw a shape, follow these steps:

1. Select the desired shape from the Shapes palette (Figure 2.4).
2. Drag to draw the shape. A silhouette of the shape appears as you drag. Release the mouse button when you have the shape you want.

FIGURE 2.4

Select a shape from the Shapes list.

Working with Object Groups

When you group two or more objects, they become a single object for the purposes of moving and resizing, so, for example, you could group a photo, a drawn shape, and a text box into a single unit.

To group two or more objects together, follow these steps:

1. Select all of the objects that you want to group.
2. press Ctrl + G The objects now form a group.

To ungroup a collection of objects, select the object group, press **Ctrl+Shift+G**.

Inserting Pictures from Files

If you already have the picture(s) you want to use, you can insert them from your own computer's drive using the Pictures button on the Insert tab. Assuming you have already acquired the images you need, use the following steps to insert one into PowerPoint:

1. Display the slide on which you want to place the image.

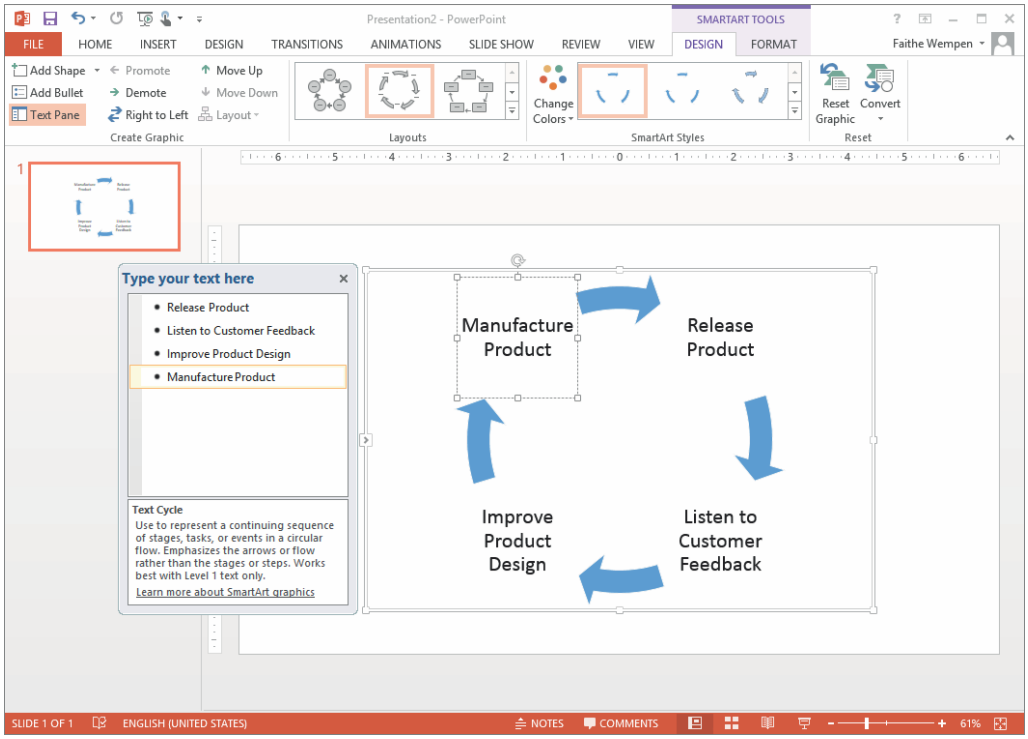

2. choose **Insert ⇨ Images ⇨ Pictures.** The Insert Picture dialog box opens. The default location shown is the Pictures library on your local hard disk.
3. Select the picture to import.
4. Click **Insert.** The picture is inserted.

SmartArt

SmartArt helps the audience understand the interdependencies of objects or processes in a visual way. Some potential uses include organizational charts, hierarchy diagrams, and flow charts.

FIGURE 2.5

A typical SmartArt graphic being constructed.

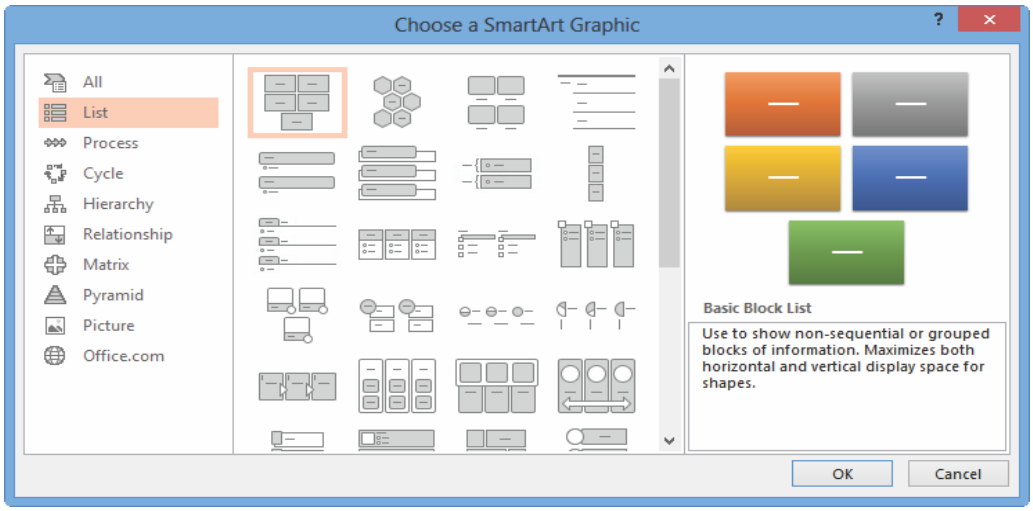

Inserting a SmartArt Graphic

1. **Click Insert ⇨ Illustrations ⇨Smart Art.** The Choose Smart Art dialog box opens.
2. Select one of the SmartArt categories, click the desired SmartArt object, and click OK, and the graphic appears. From there it's just a matter of customizing.

FIGURE 2.6

Select the graphic type you want to insert.

Assigning Transitions to Slides

Transitions determine how you get from slide A to slide B.

Setting Transition Effects and Timings

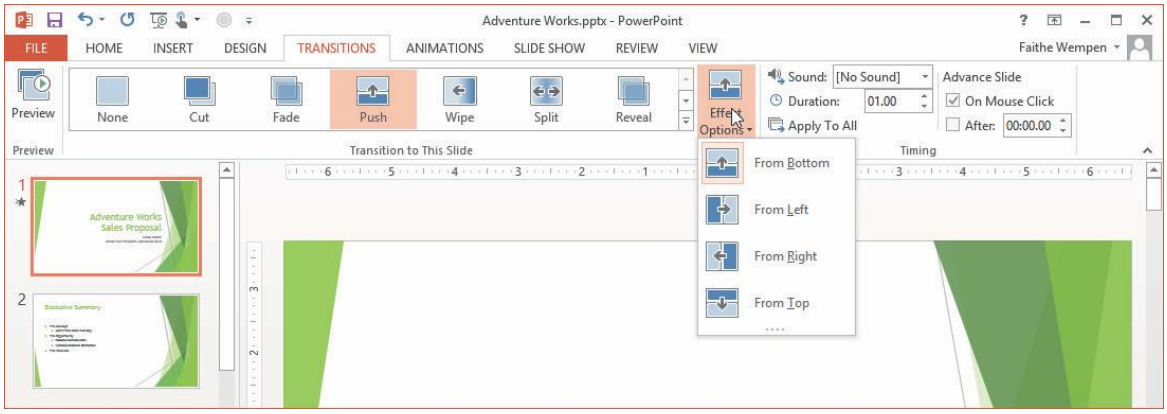

The default transition effect is None. One slide replaces another with no special effect. If you want something flashier than that, you must choose it from the Transitions tab.

To assign a transition effect and control its timing, follow these steps:

1. View or select the slide in Normal or Slide Sorter view. If you use Slide Sorter view, you can more easily select multiple slides to which you can apply the transition.
2. On the Transitions tab, in the Transition to This Slide group, click the transition you want to use.
3. Click Effect Options and select any options for the chosen effect transition as desired. The effects listed will be different depending on the transition you chose. Figure 2.8 shows the options available for the Push transition.

FIGURE 2.8

Select a transition.

Note: to automatically play the slide without the need to enter or space every time choose **after** 00:02.00 to the slides will be play automatically and to pause it while your are inside the presentation right click and choose pause or press **B or W** .

Animating Slide Content

Whereas transitions determine how a slide (as a whole) enters the screen, animations determine what happens to the slide's content after that point. You might animate a bulleted list by having each bullet point fade in one by one, for example, or you might make a picture gradually grow or shrink to emphasize it.

Animation gives you full control over how the objects on your slides appear, move, and disappear. You can not only choose from the full range of animation effects for each object, but you can also specify in what order the objects appear and what sound is associated with their appearance.

Animation: A First Look

The Animations tab provides many settings and shortcuts for creating animation events. An event is an animation occurrence, such as an object entering or exiting the slide. An event can also consist of an object on the slide moving around in some way (spinning, growing, changing color, and so on).

Each animation event appears as a separate entry in the Animation pane. You can display or hide the Animation pane by choosing **Animations ⇨ Advanced Animation ⇨ Animation Pane** at any time.

FIGURE 2.9

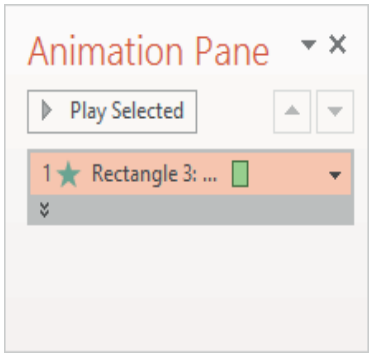

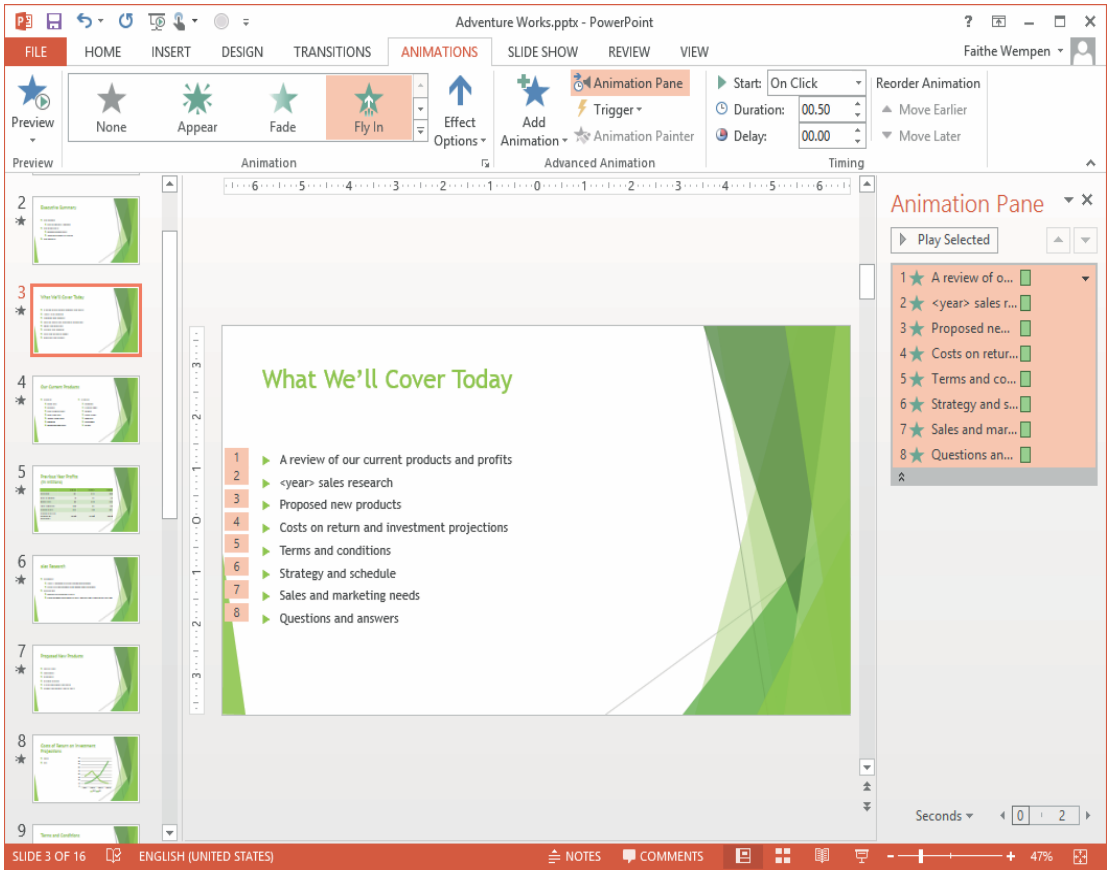

FIGURE 2.10

There are four categories of custom animation effects. Each effect has a specific purpose as well as a different icon color:

- **Entrance (green).** The item's appearance on the slide is animated.
- **Emphasis (yellow).** The item is already on the slide and is modified in some way.
- **Exit (red).** The item disappears from the slide before the slide itself disappears.

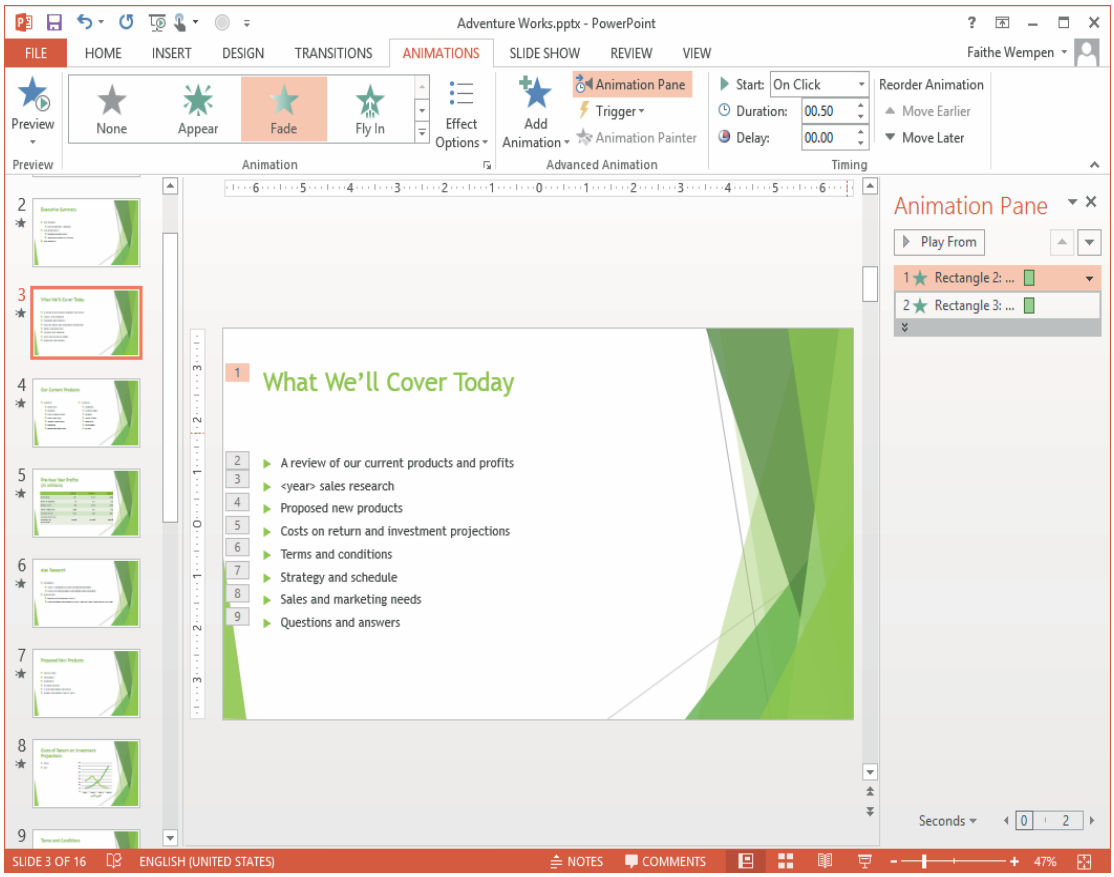

Setting Animation Event Triggers

Animation event triggers tell PowerPoint when to execute an animation. By default, an animation occurs as part of the normal animation sequence, using whatever settings you have assigned to it, such as On Click, With Previous, or After Previous.

If you want an animation effect to occur only when you click something in particular, you can use a trigger to specify this condition. For example, you may have three bullet points on a list and three photos. If you want each bullet point to appear when you click its corresponding photo, you can animate each bullet point with the graphic object as its trigger.

FIGURE 2.11

Reorder animation effects from the task pane or the Animations tab.

Keyboard Shortcuts For PowerPoint

1. F5

Pressing the F5 key begins the slideshow from the first slide.

2. Shift+F5

To begin the slideshow from the current **slide**

3. Spacebar

When you are ready to advance to the next slide or perform the next animation, you can press the **Spacebar** .

4. Backspace, P

If you need to **backtrack**, press the Backspace, P to go back to the *previous slide* or animation.

5. W

During a **presentation**, you might want to pause the slideshow so that you can discuss a certain point. Pressing the W key pauses it and displays a white screen. Pressing the W key again resumes the slideshow.
